December 2017

Since its inception in 2005, MN Community Measurement (MNCM) has been a leader in health care quality measurement and public reporting. Minnesota has long been known for its culture of collaboration in health care, and quality measurement is no exception. By bringing together stakeholders to work collaboratively on measurement, data collection, and reporting, MNCM is able to catalyze improvement in ways that would not otherwise be possible.

With an increasing focus both in Minnesota and nationally on improving health care affordability and value, the role of health care quality measurement and reporting is becoming even more important. More than ever, we must be mindful of the need to balance competing needs and interests. For example:

- As a community, we seek alignment in the measures that are being used across programs, but we also recognize the need for continued innovation to make sure that the measures we have are relevant, evidence-based, and meaningful.
- Similarly, we seek a balance between the burden of data collection and measurement and the value of the information we get. There are many measures that are easy to calculate but that are not necessarily useful for driving improvement; conversely, some measures that are more difficult to collect are uniquely valuable.
- We recognize the need to appropriately account for variations across providers in the complexity and other characteristics of the patients they serve, while also making sure that providers are accountable for the care they provide.

In the past few years, MNCM has worked in several ways to make sure that the quality measures we collect and report are aligned with other measurement efforts. Examples include modifying measure definitions and data collection cycles to align with national programs, retiring measures where appropriate, and working to have MNCM measures included in national programs such as Medicare's Quality Payment Program (QPP).

One new effort that we are particularly excited about will provide new options for streamlined data submission, reducing the amount of effort that providers currently expend for data submission and validation, and making it possible to provide feedback and comparisons in a more timely way. In addition, we are exploring the possibility of streamlining provider data feedback reports across payers,

building on MNCM's strong foundation of collaboration across stakeholders to make data more meaningful and actionable.

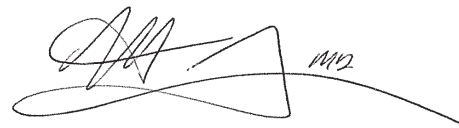

The changes described above are excellent examples of how MNCM's model of multi-stakeholder collaboration helps us to be aware of and respond to challenges and concerns from the community, while ensuring that we continue to balance competing needs and uses for data and measurement.

We would like to thank the over 130 volunteers who participate on MNCM's board, committees, and workgroups for their contributions to our work, as well as countless others who work every day to improve health outcomes in our state.

Sincerely,

Julie Sonier
President, MN Community Measurement

Tim Hernandez, MD
Board of Directors, Chair; MN Community Measurement

Letter from the President	4
Executive Summary	6
Report Overview	12
QUALITY MEASURES	
SECTION I. COMMUNITY/POPULATION HEALTH MEASURES	17
Breast Cancer Screening	18
Childhood Immunization Status (Combo 10)	22
Cervical Cancer Screening	24
Chlamydia Screening in Women	26
Colorectal Cancer Screening	30
Immunizations for Adolescents	42
Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening	44
Pediatric Preventive Care: Overweight Counseling	56
SECTION II. EFFECTIVE CLINICAL CARE MEASURES	67
Controlling High Blood Pressure	68
Depression Remission at Six Months	72
Depression Response at Six Months	77
Depression PHQ-9 Follow-Up at Six Months	82
Depression Remission at 12 Months	88
Depression Response at 12 Months	93
Depression PHQ-9 Follow-Up at 12 Months	98
PHQ-9 Utilization	104
Follow-up Care for Children Prescribed ADHD Medication	116
Maternity Care: C-Section Rate	118
Optimal Asthma Control - Adults	120
Optimal Asthma Control - Children	130
Optimal Diabetes Care	138
Optimal Vascular Care	144
Use of Spirometry Testing in the Assessment and Diagnosis of COPD	150
Spine Surgery Lumbar Spinal Fusion	152
Spine Surgery Lumbar Discectomy/Laminotomy	160
Total Knee Replacement	168
SECTION III. EFFICIENCY AND COST REDUCTION MEASURES	177
Appropriate Treatment for Children with Upper Respiratory Infection (URI)	178
Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis	182
SECTION IV. PATIENT EXPERIENCE OF CARE: CLINIC	186
APPENDICES	
Appendix 1: Highest Performers in 2017 by Medical Group Type for Clinical Measures	188
Appendix 2: Acknowledgements	190
Appendix 3: List of Medical Groups and Hospitals Reported	191
Appendix 4: Summary of Risk Adjustment and Non-Risk Adjustment Results by Measure	193
Appendix 5: Data Sources and Data Collection	384
Appendix 6: Methodology	385
Appendix 7: MNHealthScores.org	391
Appendix 8: General Guidelines for Comparing MNCM Results over Time	393

Executive Summary

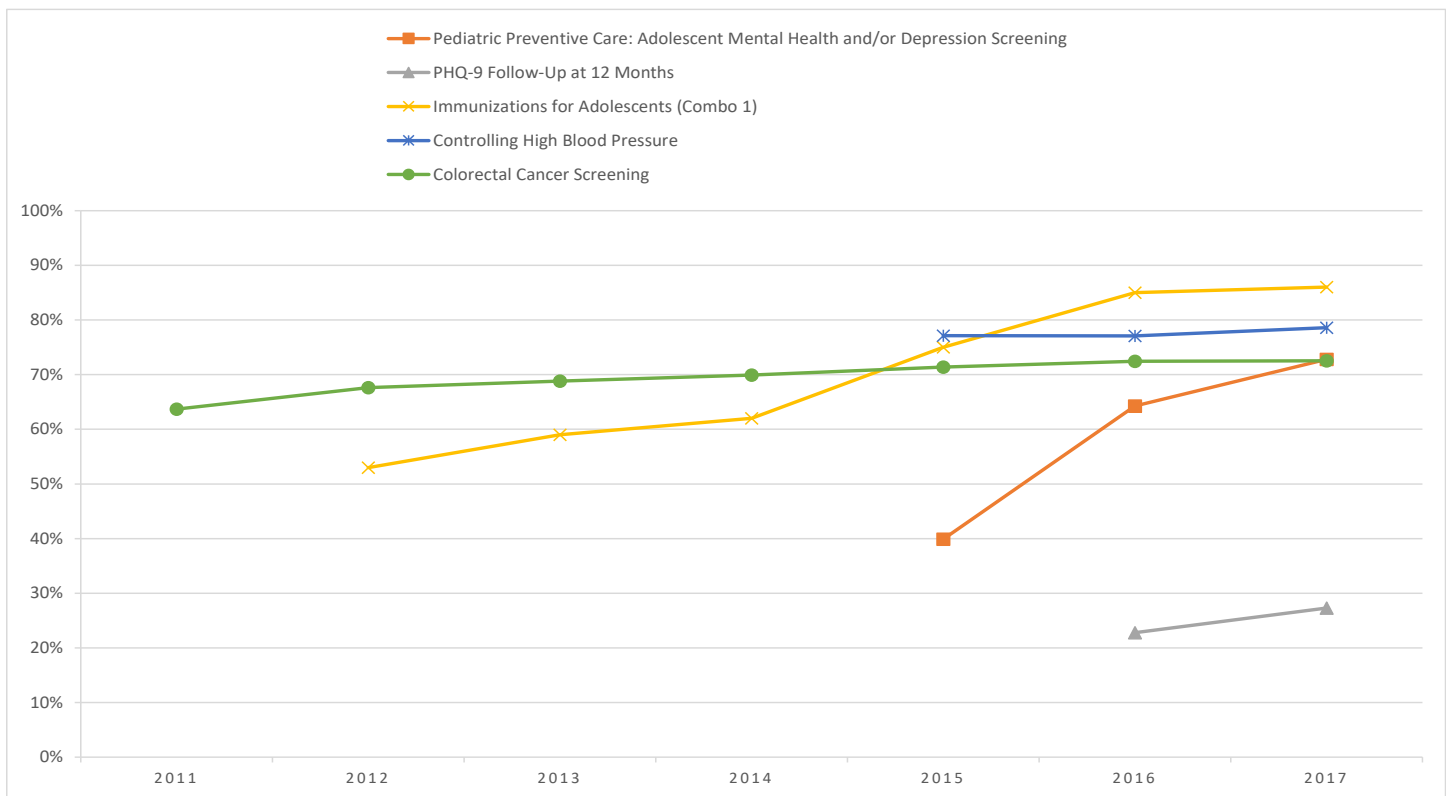

While Minnesota has some of the best health indicators in the country, there is a pattern of wide variation in health care quality. Many Minnesotans receive high quality health care that helps to maintain or restore their health and ability to function, but significant opportunities for improvement remain. MN Community Measurement’s (MNCM’s) 2017 Health Care Quality Report summarizes overall health care quality results for the year and over time, and brings the power of data, measurement and transparency to the problem of health care quality variation. Measuring and reporting this information contributes to driving improvement in the quality and experience of care. Although quality variation continues, there are several measures showing considerable improvement over time.

This is MNCM’s 14th annual Health Care Quality Report. It shows what is happening in terms of health care quality and patient experience on a statewide level and within individual medical groups/clinics. The measures in this report were recommended by MNCM’s Measurement and Reporting Committee (MARC) and are reviewed annually for continuation or retirement.

Quality Measure Improvement Over Time

Figure ES1 highlights several quality measures that showed substantial improvement from 2016 to 2017 or that have improved considerably over time.

FIGURE ES1: HIGHLIGHTS OF QUALITY MEASURE IMPROVEMENT OVER TIME

The statewide rate for **Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening** increased nine percentage points since 2016. Since 2015, the rate has improved over 33 percentage points representing over 45,000 more adolescents receiving mental health and/or depression screening.

The statewide rate for **PHQ-9 Follow-Up at 12 Months** increased four percentage points between 2016 and 2017. This means that almost 1,300 more adult patients with depression received follow-up and completed the PHQ-9 questionnaire every 12 months to track treatment progress. This measure is part of a depression measure suite which also includes Depression Response at 12 Months (i.e., improved symptoms) and Depression Remission at 12 Months (i.e., few or zero symptoms). In addition to the follow-up measure, both of these outcome-based measures showed increases.

The statewide rate for **Immunizations for Adolescents** (Combo 1) increased 33 percentage points since 2012 representing over 9,400 more children receiving one dose of meningococcal vaccine and one tetanus, diphtheria toxoids and acellular pertussis vaccine (Tdap) by their thirteenth birthday. In 2018, MNMCM will report Combo 2 which will add the Human Papilloma virus (HPV) vaccine.

The statewide rate for **Controlling High Blood Pressure** increased two percentage points since 2015 representing over 4,000 more patients who had their blood pressure under control, according to the appropriate guidelines.

The statewide rate for **Colorectal Cancer Screening** increased nine percentage points since 2011 representing over 116,000 more patients who were screened for colorectal cancer.

New Quality Measures

For the first time, Health Related Quality of Life (HRQoL) measures were included for three orthopedic measures – Total Knee Replacement, Lumbar Spine Fusion Surgery and Lumbar Spine Discectomy/Laminotomy. One process measure and two outcome-based quality of life measures (physical health and mental health) were reported for each of the three orthopedic surgeries.

The Childhood Immunization Status measure has changed compared to previous years. The new Combo 10 measure adds rotavirus, Hepatitis A and the influenza vaccine.

Statewide and Medical Group Summary by Measure

Table ES1 provides an overview of the statewide rates by measure for primary care. It also includes the percentage point changes in the rates from 2016 to 2017, and over time for applicable measures.

Twenty-four of twenty-five measures had performance rates that could be compared to last year. Of those 24 measures, 16 measures had an increase in the statewide rate. The measure with the largest statewide increase was **Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening**. One measure had a moderate increase in its statewide rate: **PHQ-9 Follow-up at 12 Months**. Eight measures had a decrease in their statewide rates.

TABLE ES1: STATEWIDE RESULTS BY MEASURE: PRIMARY CARE MEASURES

Quality Measure	2017 State-wide Average (2016 Dates of Service)	Percentage Point Change Statewide 2016 vs. 2017	Percentage Point Change Over Time
New Measures			
Childhood Immunization Status (Combo 10)	54.1%	N/A	N/A
Large Increase in Statewide Rate			
Pediatric Preventive Care: Adolescent Mental Health Screening*	72.8%	8.5 ↑	33.0 ↑ (3 years)
Moderate Increase in Statewide Rate			
PHQ-9 Follow-Up at 12 Months*	27.3%	4.5 ↑	4.5 ↑ (2 years)
Small Increase in Statewide Rate			
Cervical Cancer Screening*	73.5%	2.6 ↑	1.7 ↑ (3 years)
Follow-Up Care for Children Prescribed ADHD Medication	42.7%	2.1 ↑	4.6 ↑ (7 years)
Depression Response at 12 Months	10.8%	1.8 ↑	1.8 ↑ (2 years)
Immunizations for Adolescents*	86.4%	1.7 ↑	32.9 ↑ (6 years)
PHQ-9 Utilization	70.7%	1.4 ↑	1.4 ↑ (2 years)
Controlling High Blood Pressure*	77.5%	1.3 ↑	1.5 ↑ (3 years)
Pediatric Preventive Care: Overweight Counseling*	89.9%	1.2 ↑	4.5 ↑ (3 years)
Depression Remission at 12 Months	6.4%	1.2 ↑	1.2 ↑ (2 years)
Maternity Care: Primary C-Section Rate	23.4%	1.2 ↑	1.2 ↑ (3 years)
PHQ-9 Follow-Up at Six Months	33.5%	1.1 ↑	1.1 ↑ (2 years)
Appropriate Treatment for Adult Bronchitis	34.4%	0.7 ↑	15.1 ↑ (9 years)
Colorectal Cancer Screening*▲	72.5%	0.1 ↑	8.9 ↑ (7 years)
Breast Cancer Screening (Mammograms)	76.6%	0 ↑	2.3 ↑ (4 years)
Depression Response at Six Months	13.5%	0 ↑	0 ↑ (2 years)
Small Decrease in Statewide Rate			
Depression Remission at Six Months	7.9%	0.1 ↓	0.1 ↓ (2 years)
Use of Spirometry Testing in the Assessment and Diagnosis of COPD	39.2%	0.4 ↓	3.4 ↑ (8 years)
Appropriate Treatment for Children with URI	91.3%	0.4 ↓	5.5 ↑ (12 years)
Chlamydia Screening in Women (Ages 16-24)	49.8%	0.8 ↓	2.5 ↑ (9 years)
Optimal Diabetes Care*▲	44.7%	1.6 ↓	1.6 ↓ (2 years)
Moderate Decrease in Statewide Rate			
Optimal Vascular Care*▲	61.6%	4.6 ↓	4.6 ↓ (2 years)
Large Decrease in Statewide Rate			
Optimal Asthma Care - Adults Ages 18-50*▲	49.5%	5.9 ↓	2.8 ↓ (3 years)
Optimal Asthma Care - Children Ages 5-17*▲	57.0%	8.5 ↓	2.3 ↓ (3 years)

▲ The criteria for including patients in the measure denominator changed in 2017. This change may have contributed to the change in statewide rates for these measures.

*These statewide averages are weighted (see methods).

N/A = Measure specifications changed or the measure is in its first year of implementation. Comparisons cannot be made.

Table ES2 provides an overview of the statewide rates by measure for specialty care. It also includes the percentage point changes in the rates from 2016 to 2017, and over time for applicable measures. Six of fifteen measures had performance rates that could be compared to last year. All six orthopedic measures show increases in statewide rates compared to last year and over time.

TABLE ES2: STATEWIDE RESULTS BY MEASURE: SPECIALTY CARE MEASURES

Quality Measure	2017 State-wide Average (2016 Dates of Service)	Change Statewide 2016 vs. 2017	Change Over Time
New Measures			
Spine Surgery LSF: Procedures w/Pre-Op & Post-Op PGH 10	25.8%	N/A	N/A
Spine Surgery LSF: HRQoL Physical Health Status at One Year	5.9	N/A	N/A
Spine Surgery LSF: HRQoL Mental Health Status at One Year	1.9	N/A	N/A
Spine Surgery D/L: Procedures w/Pre-Op & Post-Op PGH 10	23.1%	N/A	N/A
Spine Surgery D/L: HRQoL Physical Health Status at Three Months	9.0	N/A	N/A
Spine Surgery D/L: HRQoL Mental Health Status at Three Months	3.6	N/A	N/A
Total Knee Replacement: Procedures w/Pre-Op & Post-Op PGH 10	19.9%	N/A	N/A
Total Knee Replacement: HRQoL Physical Health Status at One Year	7.7	N/A	N/A
Total Knee Replacement: HRQoL Mental Health Status at One Year	1.8	N/A	N/A
Moderate Increase in Statewide Rate			
Spine Surgery D/L: Functional Status at Three Months	26.3	3.6 ↑	3.6 ↑ (2 years)
Small Increase in Statewide Rate			
Spine Surgery LSF: Procedures w/Pre-Op & Post-Op ODI	40.9%	2.4 ↑	2.4 ↑ (2 years)
Spine Surgery LSF: Functional Status at One Year	18.1	1.2 ↑	1.2 ↑ (2 years)
Spine Surgery D/L: Procedures w/Pre-Op & Post-Op ODI	39.9%	2.5 ↑	2.5 ↑ (2 years)
Total Knee Replacement: Procedures w/Pre-Op & Post-Op OKS	26.2%	1.4 ↑	1.4 ↑ (2 years)
Total Knee Replacement: Functional Status at One Year	16.6	0.1 ↑	0.1 ↑ (2 years)

LSF = Lumbar Spine Fusion
 PGH 10 = PROMIS Global Health 10, assesses health related quality of life
 HRQoL = Health related quality of life
 D/L = Discectomy/Laminotomy
 ODI = Oswestry Disability Index, assesses functional status
 OKS = Oxford Knee Score, assesses functional status

Medical Group Highlights for Quality Measures

Table ES3 lists 14 medical groups with consistently high performance on three or more quality measures over three years. It also lists 17 medical groups with consistent improvement on three or more quality measures over three years.

Patient Experience of Care - Clinic

Patient Experience results are included in the report for the fifth time (data available every other year). Figure ES2 summarizes the statewide patient experience results for five domains: Access to Care, Provider Communication, Care Coordination, Office Staff, and Rating of Provider. Dues to changes in the survey, most of these measures are not comparable over time.

FIGURE ES2: PATIENT EXPERIENCE OF CARE STATEWIDE RESULTS

Additional Information Available

This report includes results for our ambulatory quality measures and patient experience. The measures in this report, along with measures of cost and hospital quality can be found at MNHealthScores.org. Cost measures are also published in a separate report.

Report Overview

The measures in this 2017 *Health Care Quality Report* were recommended by MNMCM's Measurement and Reporting Committee (MARC) and approved by our Board of Directors. We have expanded, revised, and retired measures to stay aligned with evidence-based guidelines. Measurement changes across years are reflected in **Tables 1 and 2**.

TABLE 1: PERFORMANCE MEASURES OVER THE YEARS - MEDICAL GROUP LEVEL RESULTS

 *~ Depression - For previously indexed patients, reindex criteria requires only a PHQ-9 score greater than nine
 Ⓢ New established patient criteria

The 2017 *Health Care Quality Report* features information on all three elements necessary to reach optimal health care performance: quality, patient experience and cost. MNMCM also publishes an annual cost report with additional details data at the medical group level.

The Quality section features information on **40 measures**. There are 9 new ambulatory care measures. Additionally, there was one measures with measure specification changes: Childhood Immunization Status Combo 10. The ambulatory care quality measures are organized into the following categories:

- **Community/Population Health**
- **Effective Clinical Care**
- **Efficiency and Cost Reduction**

Two types of measures are included in this section: **Direct Data Submission (DDS)** measures and **HEDIS** measures. DDS measures use data collected directly from medical groups. DDS measures can be reportable at both the clinic and/or medical group levels. These measures relied on data specifications published in the 2017 Direct Data Submission Guides for each applicable measure. These measures are aligned with clinical guidelines. This report includes 30 DDS measures.

TABLE 3: DIRECT DATA SUBMISSION MEASURES

Community/Population Health	
Colorectal Cancer Screening ✓	
Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening	
Pediatric Preventive Care: Overweight Counseling	
Effective Clinical Care	
Depression Remission at Six Months ✓	Spine Surgery Lumbar Fusion: Pre and post-op ODI administration
Depression Remission at Twelve Months ✓	Spine Surgery Lumbar Fusion: Functional Status ✓
Depression Response at Six Months ✓	Spine Surgery Lumbar Fusion: Pre and post-op PROMIS administration
Depression Response at Twelve Months ✓	Spine Surgery Lumbar Fusion: HRQoL Physical Health Status ✓
Maternity Care: C-Section Rate ✓	Spine Surgery Lumbar Fusion: HRQoL Mental Health Status ✓
Optimal Asthma Control - Adults Ages 18-50 ✓	Total Knee Replacement (TKR) : Pre and post-op OKS administration
Optimal Asthma Control - Children Ages 5-17	TKR: Functional Status ✓
Optimal Diabetes Care ✓	TKR: Pre and post-op PROMIS administration
Optimal Vascular Care ✓	TKR: HRQoL Physical Health Status ✓
PHQ-9 Follow-up at Six Months ✓	TKR: HRQoL Mental Health Status ✓
PHQ-9 Follow-up at Twelve Months ✓	
PHQ-9 Utilization	
Spine Surgery Discectomy/Laminotomy (D/L): Pre and post-op ODI administration	
Spine Surgery D/L: Functional Status ✓	
Spine Surgery D/L: Pre and post-op PROMIS administration	
Spine Surgery D/L: Health Related Quality of Life (HRQoL) Physical Health Status ✓	
Spine Surgery D/L: HRQoL Mental Health Status ✓	

✓ = Risk Adjusted, Actual to Expected method

HEDIS measures use data collected from health plan claims data. Health plan data collection uses either the administrative method (claims only) or hybrid method (claims plus chart review). Measures using health plan data relied on National Committee for Quality Assurance's (NCQA) HEDIS specifications, which are also aligned with clinical guidelines. HEDIS is a national set of standardized performance measures originally designed for the managed care industry. The measures have been adopted for use by MNMCM to evaluate the performance of medical groups. MNMCM reports on 10 HEDIS measures.

TABLE 4: HEDIS MEASURES

Community/Population Health
Breast Cancer Screening
Childhood Immunization Status (Combo 10)
Cervical Cancer Screening
Chlamydia Screening in Women
Immunizations for Adolescents
Effective Clinical Care
Controlling High Blood Pressure
Follow-Up Care for Children Prescribed ADHD Medication
Use of Spirometry Testing in the Assessment and Diagnosis of COPD
Efficiency and Cost Reduction
Appropriate Treatment for Children with URI
Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis

The **Patient Experience** section features information on clinic patient experience and utilizes the CG-CAHPS 6-month survey.

See the Methods appendix for more information on the methodology for each measure. In the Results by Measure section, results are listed with a description of the measure; charts, tables and figures describing the results; and a listing of performance highlights for that measure.

The medical group and clinic ratings are based on risk adjusted results where applicable. The results for the following measures are risk adjusted using the Actual to Expected methodology (see Appendix 6).

Please see next page.

SECTION I. COMMUNITY/POPULATION HEALTH MEASURES

This section includes data for the following eight measures of community and population health:

- **Breast Cancer Screening** - Measures the percentage of women ages 50-74 who had a mammogram during the measurement year or prior year.
- **Childhood Immunization Status (Combo 10)** – Measures the percentage of two-year old children who had four DTaP, three IPV, one MMR, three H influenza type B, three Hepatitis B, one VZV, four pneumococcal conjugate, one hepatitis A, two or three rotavirus, and two influenza vaccines within the HEDIS specified time period and by their second birthday.
- **Cervical Cancer Screening** – Measures the percentage of women ages 21-64 who were screened for cervical cancer during the measurement year.
- **Chlamydia Screening in Women** – Measures the percentage of women ages 16-24 who were sexually active and tested for chlamydia during the measurement year.
- **Colorectal Cancer Screening** – Measures the percentage of adult ages 51-75 who were up to date with appropriate colorectal cancer screening exams. Appropriate exams include colonoscopy, sigmoidoscopy, CT colonography, or fecal blood tests.
- **Immunizations for Adolescents** – Measures the percentage of 13 year olds who had received one dose of meningococcal conjugate vaccine and one tetanus, diphtheria toxoids and acellular pertussis vaccine (Tdap) by their 13th birthday.
- **Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening** – Measures the percentage of pediatric patients ages 12-17 who had a documented mental health and/or depression screening at a well-child visit.
- **Pediatric Preventive Care: Overweight Counseling** – Measures the percentage of pediatric patients ages 3-17 who had an overweight or obesity assessment at a well-child visit and if the BMI percentile is greater than or equal to 85, had appropriate documentation of counseling for physical activity and nutrition.

Breast Cancer Screening

Breast cancer is the second leading cause of cancer death in women, regardless of race or ethnicity. Screening can help improve outcomes and reduce costs. The US Preventive Services Task Force recommends screening for breast cancer in women aged 50 to 74 years.

This measure reflects the percentage of women ages 50–74 who received a mammogram during the prior two years (the measurement year or prior year).

The statewide rate for Breast Cancer Screening is 77 percent. **Table 5** displays the details of this statewide rate. **Figure 1** shows the average rate for this measure over time.

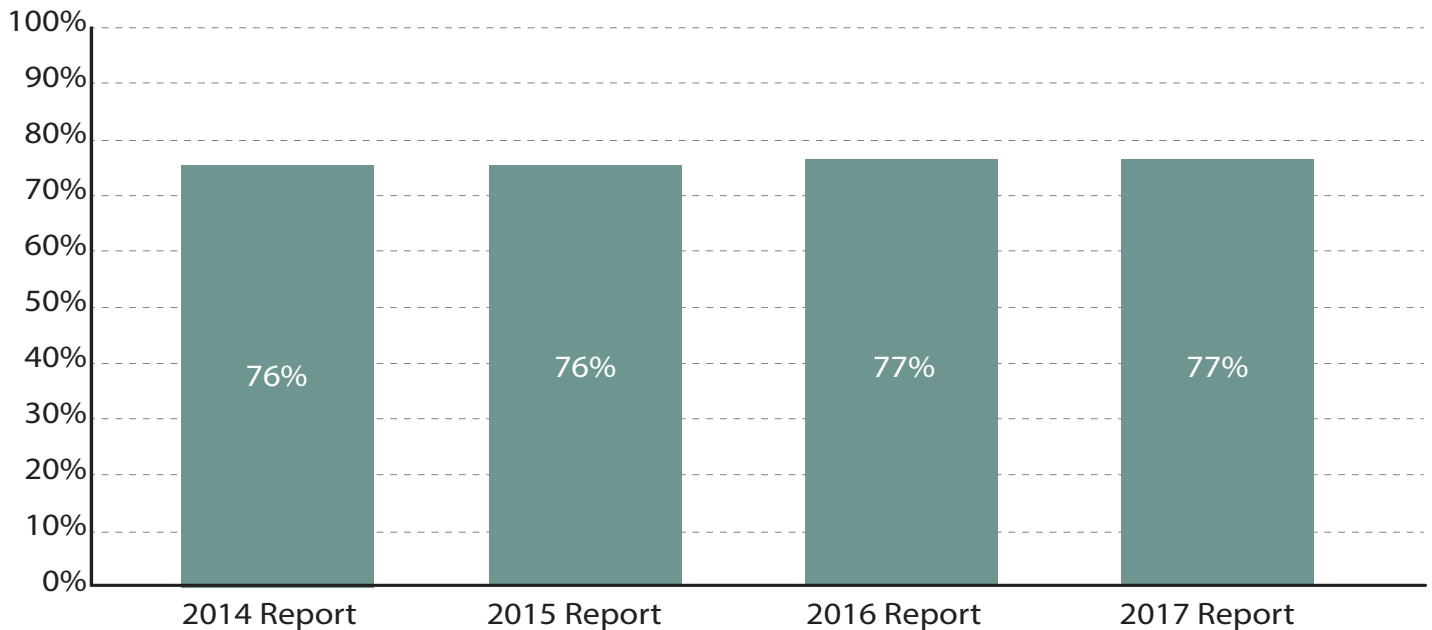

Data collected for this measure are from health plan claims.

TABLE 5: STATEWIDE RATE FOR BREAST CANCER SCREENING

	Statewide Average	95% CI	Numerator (Patients who were screened)	Denominator
Breast Cancer Screening	76.6%	76.4%-76.7%	204,506	252,625

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 1: STATEWIDE RATES FOR BREAST CANCER SCREENING

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Medical Group Results

Highest Performers in 2017

The medical group average[^] showed that 81 percent of women 50-74 years of age had a mammogram. **Sacred Heart Mercy Health Care Center** set the benchmark of 93 percent. There were 24 of 136 medical groups with rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted results.

- Sacred Heart Mercy Health Care Center*
- Mayo Clinic Health System - Springfield*
- Dawson Clinic*
- John A. Haugen Associates, PA*
- Premier OB/GYN of Minnesota*
- Alexandria Clinic
- Ortonville Area Health Services - Northside Medical Clinic
- Obstetrics and Gynecology Associates
- HealthPartners Clinics
- Gundersen Health System
- Mayo Clinic
- Mayo Clinic Health System - Franciscan Healthcare in La Crosse
- Allina Health Clinics
- Allina Health Specialties
- Mayo Clinic Health System - Owatonna
- Sanford Health - Sioux Falls Region
- Mayo Clinic Health System - Mankato
- Park Nicollet Health Services
- Mankato Clinic, Ltd.
- Essentia Health
- Affiliated Community Medical Centers
- CentraCare Health
- Sanford Health - Fargo Region
- Fairview Medical Group

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Breast Cancer Screening was made by **Neighborhood HealthSource**, whose score increased by more than 14 percentage points, from 59 percent to 73 percent.

[^]For HEDIS measures, the medical group average includes patients who are attributed to a medical group. Conversely, the statewide average includes all patients - those attributed to a medical group and those who are not.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Nineteen medical groups achieved consistently high performance and above average rates over the past three years for Breast Cancer Screening:

Affiliated Community Medical Centers	Crosse
Alexandria Clinic	Mayo Clinic Health System - Mankato
Allina Health Specialties	Mayo Clinic Health System - Owatonna
CentraCare Health	Obstetrics and Gynecology Associates
Dawson Clinic	Ortonville Area Health Services - Northside Medical Clinic
Gundersen Health System	Park Nicollet Health Services
HealthPartners Clinics	Premier OB/GYN of Minnesota
John A. Haugen Associates, PA	Sanford Health - Fargo Region
Mankato Clinic, Ltd.	Sanford Health - Sioux Falls Region
Mayo Clinic	
Mayo Clinic Health System - Franciscan Healthcare in La	

Four medical groups showed consistent improvement over three years:

Avera Medical Group - Estherville Medical Clinic	NorthPoint Health & Wellness Center
Mayo Clinic Health System - Waseca	St. Paul Family Medical Center

Thirty-two medical groups had rates that were relatively stable over three years:

Altru Health System	Willmar	Prairie Ridge Hospital & Health Services
Amery Hospital and Clinic	Gateway Family Health Clinic	Raiter Clinic, LTD - IHN
Apple Valley Medical Clinic	HealthEast Clinics	Richfield Medical Group
Avera Medical Group - Pipestone	Hennepin County Medical Center	Riverwood Healthcare Center
Avera Medical Group - McGreevy Clinic, United Medical Center,	(HCMC) Clinics	Sawtooth Mountain Clinic
Worthington Speciality Clinic	Hutchinson Health	St. Luke's Clinics
Burnsville Family Physicians	Lake Region Healthcare	Stellis Health, PA
Cuyuna Regional Medical Center	Lakeview Clinic	Valley Family Practice - MHN
Entira Family Clinics	Mayo Clinic Health System - Red Wing	West Side Community Health Services
Fairview Medical Group	Mille Lacs Health System	Windom Family Medical Center
Fairview Mesaba Clinics	North Clinic	Winona Health Services
Family Practice Medical Center of	Northfield Hospital + Clinics	

Three medical groups showed a consistent decrease over three years:

Adefris & Toppin Women's Specialists	Olmsted Medical Center
Advanced Medical Clinic	

The remaining seventy medical groups did not have a discernible pattern over three years.

Please see next page.

Childhood Immunization Status (Combo 10)

Infants and toddlers are especially vulnerable to infectious diseases, due to their developing immune systems. Vaccines can help prevent many diseases and their serious side effects. Immunization of infants and toddlers is recommended by the American Academy of Pediatrics (AAP).

This measure reflects the percentage of two year old children who received all of the following vaccines by their second birthday:

- Four diphtheria, tetanus and acellular pertussis (DTaP)
- Three polio (IPV)
- One measles, mumps and rubella (MMR)
- Three H influenza type B
- Three Hepatitis B

- One chicken pox (VZV)
- Four pneumococcal conjugate
- One Hepatitis A
- Two or three Rotavirus
- Two influenza

The statewide rate for Childhood Immunization Status (Combo 10) is 54 percent. **Table 6** displays the details of the 2017 rate.

Data for this measure are collected from health plan claims, the Minnesota Immunization Information Connection registry (MIIC) and medical record review.

TABLE 6: STATEWIDE RATE FOR CHILDHOOD IMMUNIZATION STATUS (COMBO 10)

	Statewide Average (Weighted)	95% CI	Numerator (Patients who had all vaccinations)	Denominator (Patients sampled)	Total Eligible
Childhood Immunization	54.1%	52.8%-55.5%	2,391	5,606	24,894

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

THERE IS NO TREND CHART BECAUSE THE MEASURE SPECIFICATION CHANGED FOR THIS MEASURE.

Highest Performers in 2017

The medical group average[^] showed 56 percent of two year old children were up-to-date with all recommended immunizations by their second birthday. **Mankato Clinic, Ltd.** set the benchmark of 83 percent. Twelve of 41 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted results.

- Mankato Clinic, Ltd.*
- Fridley Children’s & Teenagers’ Medical Center - Children’s Physician Network*
- Wayzata Children’s Clinic*
- South Lake Pediatrics*
- Sanford Health - Sioux Falls Region*
- Children’s Clinic Network
- Entira Family Clinics
- Central Pediatrics
- HealthPartners Clinics
- Mayo Clinic Health System - Owatonna
- Allina Health Specialties
- Allina Health Clinics

Biggest improvement from 2016–2017

Not applicable due to measure specification changes.

Medical group performance over time (2015-2017)

Not applicable due to measure specification changes.

[^]For HEDIS measures, the medical group average includes patients who are attributed to a medical group. Conversely, the statewide average includes all patients - those attributed to a medical group and those who are not.

Cervical Cancer Screening

Cervical cancer was once the leading cause of cancer death for women. Screening reduces the risk of death and increases quality of life in women. Screening for cervical cancer or screening plus human papillomavirus co-testing in women is recommended by the US Preventive Services Task Force.

This measure reflects the percentage of women ages 21-64 who were screened for cervical cancer during the measurement year using either of two criteria: women age 21-64 who had a cervical cytology performed every three years or women age 30-64 who had cervical cytology/human papillomavirus co-testing performed every five years.

The statewide rate for Cervical Cancer Screening is 74 percent. **Table 7** displays the details of this statewide rate. **Figure 2** displays the statewide rate over time. The statewide rate increased by three percentage points from 2016.

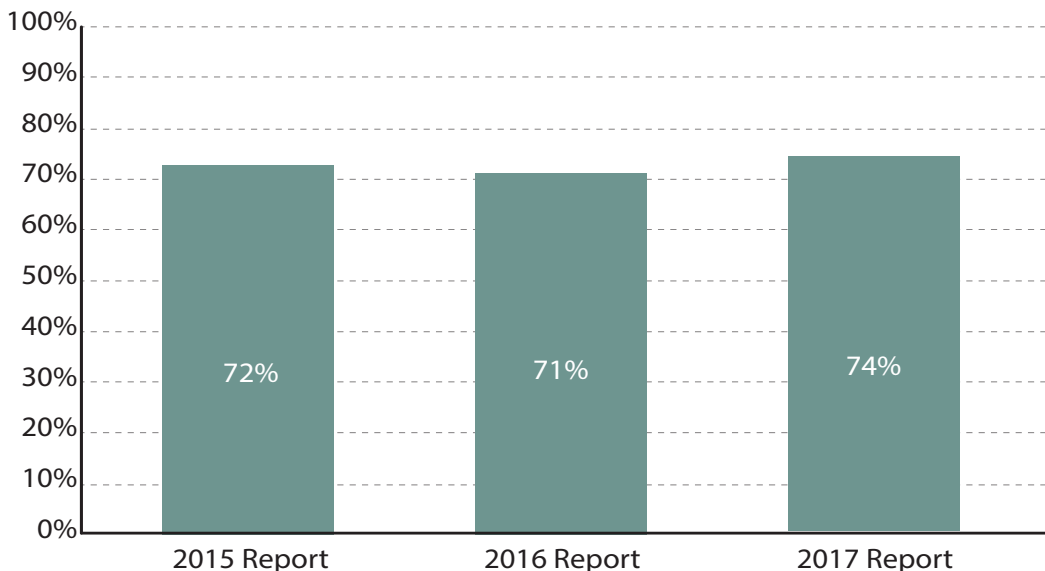

Data for this measure are collected from health plan claims.

TABLE 7: STATEWIDE RATE FOR CERVICAL CANCER SCREENING

	Statewide Average (Weighted)	95% CI	Numerator (Patients who were screened)	Denominator (Patients Sampled)	Total Eligible
Cervical Cancer Screening	73.5%	72.7%-74.3%	7,484	11,828	484,018

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 2: CERVICAL CANCER SCREENING OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Highest Performers in 2017

The medical group average[^] showed that 81 percent of women 21-64 years of age received cervical cancer screening. **Mayo Clinic Health System - Waseca** set the benchmark of 96 percent. Nine out of 58 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted results.

- Mayo Clinic Health System - Waseca*
- Northwest Family Physicians*
- Lakeview Clinic*
- Hennepin County Medical Center (HCMC) Clinics*
- Park Nicollet Health Services*
- Mayo Clinic Health System - Owatonna
- Mayo Clinic Health System - Red Wing
- Fairview Medical Group
- HealthPartners Clinics

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Cervical Cancer Screening was made by **Mayo Clinic Health System - Waseca** whose score increased by 28 percentage points, from 68 percent to 96 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Two medical groups achieved consistently high performance and above average rates over the past three years for Cervical Cancer Screening:

Fairview Medical Group

Park Nicollet Health Services

Six medical groups showed consistent improvement over three years:

Hennepin County Medical Center (HCMC) Clinics
Mayo Clinic Health System - Albert Lea and Austin
Mayo Clinic Health System - Red Wing

St. Luke's Clinics
Stellis Health, PA
University of Minnesota Physicians

No medical groups had rates that were relatively stable over three years.

One medical group showed a consistent decrease over three years:

Hutchinson Health

The remaining fourteen medical groups did not have a discernible pattern over three years.

[^]For HEDIS measures, the medical group average includes patients who are attributed to a medical group. Conversely, the statewide average includes all patients - those attributed to a medical group and those who are not.

Chlamydia Screening in Women

Chlamydia is the most common sexually transmitted disease in the US and can lead to serious health problems, including infertility in women. Chlamydia most often has no symptoms, and if symptoms do appear, it may be several weeks after being infected. Screening for chlamydia is recommended by the US Preventive Services Task Force.

This measure reflects the percentage of sexually active women ages 16-24 who had at least one test for chlamydia during the measurement year.

The statewide rate for Chlamydia Screening is 50 percent. **Table 8** displays the details of the 2017 rate. **Figure 3** displays the statewide rates over time. The rate decreased by one percentage point from 2016 to 2017.

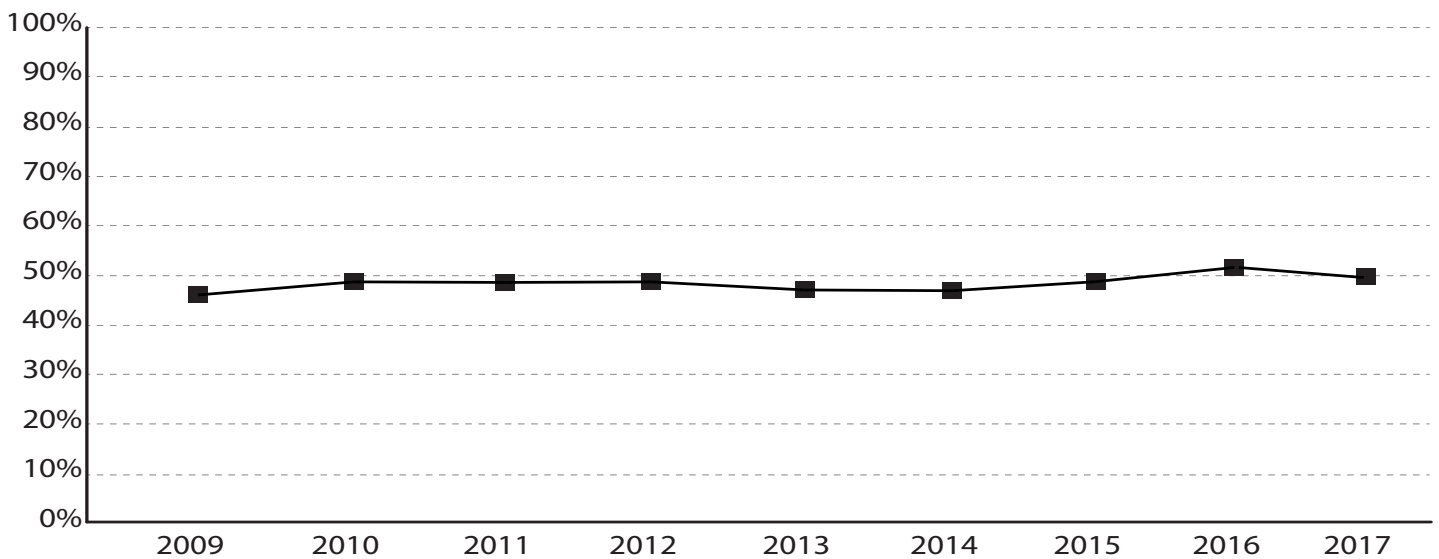

The data for this measure are collected from health plan claims.

TABLE 8: STATEWIDE RATE FOR CHLAMYDIA SCREENING IN WOMEN

	Statewide Average	95% CI	Numerator (Patients who were screened)	Denominator
Chlamydia Screening	49.8%	49.5%-50.2%	43,504	87,302

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 3: STATEWIDE RATES FOR CHLAMYDIA SCREENING IN WOMEN OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Medical Group Results

Highest Performers in 2017

The medical group average[^] showed 52 percent of sexually active women ages 16-24 had a chlamydia test. **Face to Face Health and Counseling** set the benchmark of 86 percent. Fourteen of 123 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted rates.

- Face to Face Health & Counseling Service, Inc.*
- Planned Parenthood Minnesota, North Dakota, South Dakota*
- NorthPoint Health & Wellness Center*
- HealthPartners Clinics*
- Entira Family Clinics*
- Allina Health Specialties
- Allina Health Clinics
- Adefris & Toppin Women's Specialists
- Central Pediatrics
- Hennepin County Medical Center (HCMC) Clinics
- Community University Health Care Center
- Park Nicollet Health Services
- Fairview Medical Group
- CentraCare Health

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Chlamydia Screening in Women was made by **Glenwood Medical Center**, whose score increased by more than 21 percentage points, from 26 percent to 47 percent.

[^]For HEDIS measures, the medical group average includes patients who are attributed to a medical group. Conversely, the statewide average includes all patients - those attributed to a medical group and those who are not.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in clinics with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Eleven medical groups achieved consistently high performance and above average rates over the past three years for Chlamydia Screening in Women:

Adefris & Toppin Women's Specialists	Hennepin County Medical Center (HCMC) Clinics
Allina Health Specialties	NorthPoint Health & Wellness Center
Allina Health Clinics	Park Nicollet Health Services
Entira Family Clinics	Planned Parenthood Minnesota, North Dakota, South Dakota
Face to Face Health & Counseling Service, Inc.	
Fairview Medical Group	
HealthPartners Clinics	

Fifteen medical groups showed consistent improvement over three years:

All About Children Pediatrics - Children's Health Network	Northwest Family Physicians
Amery Hospital and Clinic	Parkview Medical Clinic - Minnesota Healthcare Network
Avera Medical Group - Pipestone	Sawtooth Mountain Clinic
Central Pediatrics	Seven Day Clinic
Children's Clinic Network	St. Croix Regional Medical Center
Dulcimer Medical Center	Unity Family Healthcare - Avon
Mankato Clinic, Ltd.	Wayzata Children's Clinic
Mayo Clinic Health System-Red Cedar, Inc.	

Eight medical groups had rates that were relatively stable over three years:

Children's Health Care	Mayo Clinic
Foley Medical Center	Mayo Clinic Health System - Mankato
Gateway Family Health Clinic	Mayo Clinic Health System - Red Wing
Glencoe Regional Health Services	Sanford Health - Sioux Falls Region

Eight medical groups showed consistent decreases over three years:

Hutchinson Health	Scenic Rivers Health Services
Mayo Clinic Health System - Franciscan Healthcare in La Crosse	Sibley Medical Center DBA Ridgeview Sibley Medical Center
Open Cities Health Center	United Family Medicine
Renville County Hospital and Clinics	West Side Community Health Services

The remaining seventy-five medical groups did not have a discernible pattern over three years.

Please see next page.

Colorectal Cancer Screening

Of cancers that affect both men and women, colorectal cancer is the second leading cause of cancer-related deaths in the United States and the third most common cancer in men and women. Colorectal cancer affects men and women of all racial and ethnic groups and is found most often in people aged 50 years or older. Screening helps find colorectal cancer at an early state, when treatment often leads to a cure.

This measure reflects the percentage of adults ages 51-75 who are up-to-date with the appropriate screening for colorectal cancer. Appropriate screenings for purposes of this measure include one of the following:

- Colonoscopy during the measurement year or the nine years prior, or
- Flexible sigmoidoscopy during the measurement year or the four years prior, or
- CT colonography during the measurement year or the four years prior, or
- Fecal immunochemical test (FIT)-DNA during the measurement year or the two years prior, or
- Guaiac-based fecal occult blood test (gFOBT) or FIT during the measurement year.

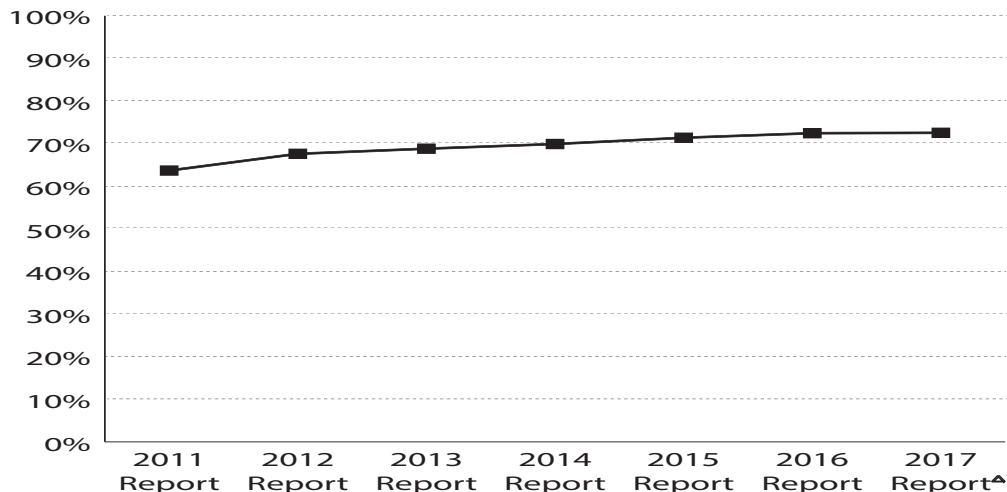

The statewide rate for Colorectal Cancer Screening is 73 percent. **Table 9** displays the details of this statewide rate. **Figure 4** shows the statewide rate over time. The rate has increased steadily since 2011.

Data collected for this measure are submitted directly to MNMCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 9: STATEWIDE RATE FOR COLORECTAL CANCER SCREENING

	Statewide Average (Weighted)	95% CI	Numerator (Patients who were screened)	Denominator (Patients submitted)	Total Eligible
Colorectal Cancer Screening	72.5%	72.5%-72.6%	953,994	1,312,884	1,346,255

FIGURE 4: STATEWIDE RATES FOR COLORECTAL CANCER SCREENING OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.
 ▲ The criteria for including patients in the measure denominator changed in 2017. This change may have contributed to the change in statewide rates for these measures.

Clinic Results

Highest Performers in 2017

Clinic results showed an average of 73 percent of patients ages 51-75 had appropriate screening for colorectal cancer. **Obstetrics, Gynecology and Infertility - Maple Grove** set the benchmark of 93 percent. Based on risk adjusted results, there were 188 of 699 clinics with rates that were statistically above the expected result for their patient mix. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure based on risk adjusted results.

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Colorectal Cancer Screening (clinic results) was made by **Hennepin County Medical Center (HCMC) Clinics - Golden Valley Clinic** whose score increased by more than 35 percentage points, from 42 percent to 77 percent.

Clinic performance over time (2015-2017)

We reviewed the data to identify patterns of clinic performance in clinics with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order under their medical group name.

One hundred and twenty-two clinics showed consistently high performance over three years:

- Affiliated Community Medical Centers
 - Affiliated Community Medical Centers - Willmar Clinic

The remaining two hundred and eighty-two clinics did not have a discernable pattern over three years.

Clinic Regional Results

Highest performers in 2017 by region

Clinic results showed differences in performance for Colorectal Cancer Screening among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below with the number of high-performing clinics shown along with the total number of clinics that submitted data. The high-performing clinics are listed under their medical group name in alphabetical order by region.

East Metro - 34 out of 87 (39 percent)

Medical Group Results

Highest Performers in 2017

Results by medical group showed an average of 73 percent of patients ages 51-75 had appropriate screening for colorectal cancer. **Catalyst Medical Clinic** set the benchmark of 90 percent. Based on risk adjusted results, there were 27 of 122 medical groups with rates that were statistically above the expected result for their patient mix. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on risk adjusted results.

- Catalyst Medical Clinic*
- Clinic Sofia Ob/Gyn*
- Obstetrics and Gynecology Associates*
- Mayo Clinic*
- Sacred Heart Mercy Health Care Center
- Southdale Ob/Gyn Consultants*
- Comprehensive Healthcare for Women
- Allina Health Specialties
- Edina Sports Health & Wellness
- Mankato Clinic, Ltd.

- Sanford Health - Sioux Falls Region
- Burnsville Family Physicians
- Park Nicollet Health Services
- Mayo Clinic Health System
- Essentia Health

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Colorectal Cancer Screening (medical group results) was made by **Murray County Clinic**, whose score increased by more than 31 percentage points, from 33 percent to 65 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Eighteen medical groups showed consistently high performance and above average rates over the past three years for Colorectal Cancer Screening:

Alexandria Clinic	Fairview Health Services	Mayo Clinic Health System
Allina Health Clinics	HealthPartners Central Minnesota Clinics	Obstetrics and Gynecology Associates
Allina Health Specialties	HealthPartners Clinics	Partners OB/GYN, PA
Burnsville Family Physicians	John A. Haugen Associates, PA	Sanford Health - Fargo Region
CentraCare Health	Mankato Clinic, Ltd.	Southdale Ob/Gyn Consultants
Clinic Sofia Ob/Gyn	Mayo Clinic	
Edina Sports Health & Wellness		

Fifteen medical groups showed consistent improvement over three years:

Apple Valley Medical Clinic	Life Medical
Appleton Area Health Services	Murray County Clinic
Cedar Riverside People's Center	Native American Community Clinic
Comprehensive Healthcare for Women	Neighborhood Healthsource
Dawson Clinic	Ortonville Area Health Services - Northside Medical Clinic
Fairview Mesaba Clinics	RiverView Health
Kittson Memorial Clinic	Sanford Health - Sioux Falls Region
Lakewood Health System	University of Minnesota Physicians

Twelve medical groups had rates that were relatively stable over three years:

Affiliated Community Medical Centers	HealthEast Clinics
Altru Health System	Olmsted Medical Center
Chippewa County Montevideo Hospital & Medical Clinic	Park Nicollet Health Services
Family Practice Medical Center of Willmar	Planned Parenthood Minnesota, North Dakota, South Dakota
Glencoe Regional Health Services	Richfield Medical Group
Grand Itasca Clinic	St. Luke's Clinics
Gundersen Health System	United Family Medicine

The remaining fifty-five medical groups did not have a discernable pattern over three years.

Please see next page.

Immunizations for Adolescents

Adolescents are at risk for vaccine-preventable diseases. These diseases carry serious side effects, including long-term disability and even death. Vaccines for adolescents are recommended by the Centers for Disease Control and Prevention and the American Academy of Pediatrics.

This measure reflects the percentage of 13 year olds who had received one dose of meningococcal vaccine and one tetanus, diphtheria toxoids and acellular pertussis vaccine (Tdap) by their thirteenth birthday.

The statewide rate for Immunizations for Adolescents is 86 percent. **Table 10** displays the details of this statewide rate. **Figure 5** shows the average rate for this measure over time. The statewide rate has increased by 33 percentage points since 2012. A one percentage point increase was seen between 2016 and 2017.

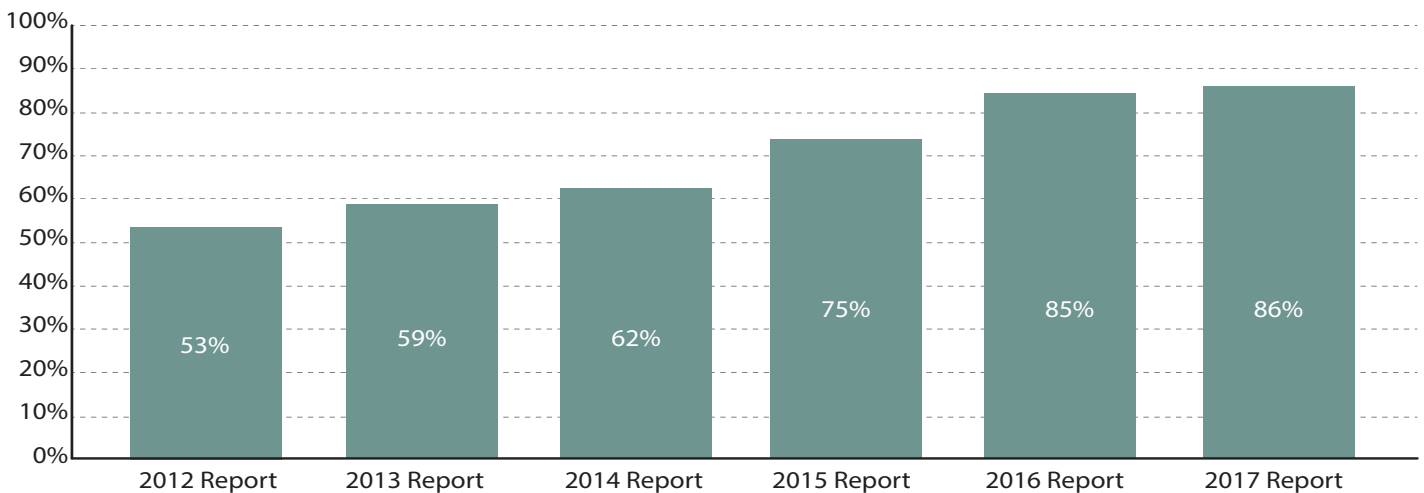

Data for this measure are collected from health plan claims, the Minnesota Immunization Information Connection registry (MIIC) and medical record review.

TABLE 10: STATEWIDE RATE FOR IMMUNIZATIONS FOR ADOLESCENTS

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Immunizations for Adolescents	86.4%	85.4%-87.3%	4,455	5,305	28,655

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 5: STATEWIDE RATES FOR IMMUNIZATIONS FOR ADOLESCENTS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Medical Group Results

Highest Performers in 2017

The medical group average[^] showed an average of 89 percent of 13 year olds were up-to-date with all recommended immunizations by their thirteenth birthday. **Wayzata Children's Clinic** set the benchmark of 98 percent. Five out of 35 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicated a Top 5 performer for this measure based on unadjusted results.

- Wayzata Children's Clinic*
- Southdale Pediatric Associates, Ltd.*
- HealthPartners Clinics*
- Allina Heath Clinics*
- Allina Health Specialties*

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Immunizations for Adolescents was made by **Southdale Pediatrics Associates, Ltd**, whose score increased by 22 percentage points, from 76 percent to 98 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Two medical groups achieved consistently high performance and above average rates over the past three years for Immunizations for Adolescents:

Allina Health Specialties
HealthPartners Clinics

Four medical groups showed consistent improvements over three years:

Affiliated Community Medical Centers
Hennepin County Medical Center (HCMC) Clinics

Mayo Clinic Health System - Albert Lea and Austin
Sanford Health - Sioux Falls Region

One medical group had rates that consistently decreased over three years:

Pediatric and Young Adult Medicine

There were no medical groups with rates that were relatively stable over three years.

The remaining twenty-six medical groups did not have a discernible pattern over three years.

[^]For HEDIS measures, the medical group average includes patients who are attributed to a medical group. Conversely, the statewide average includes all patients - those attributed to a medical group and those who are not.

Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening

Depression and other mental health issues are a significant problem for adolescents and often difficult to recognize. The US Preventive Services Task Force recommends screening for major depressive disorder in adolescents.

This measure assesses the percentage of adolescent patients age 12-17 who were administered a mental health and/or depression screening tool at a well-child visit. The following tools were acceptable for this measure:

- Patient Health Questionnaire - 9 item version (PHQ-9)
- PHQ-9M Modified for Teens/Adolescents
- Kutcher Depression Scale (KADS)
- Beck Depression Inventory II (BDI-II)
- Beck Depression Inventory Fast Screen (BDI-FS)

- Child Depression Inventory (CDI)
- Child Depression Inventory II (CDI-2)
- Patient Health Questionnaire - PHQ-2
- Pediatric Symptom Checklist - 17 items (PSC-17)
- Pediatric Symptom Checklist - 35 items (PSC-35) or Youth Self Report (PCS Y-SR)
- Global Appraisal of Individual Needs (GAIN-SS) screens for mental health and substance abuse

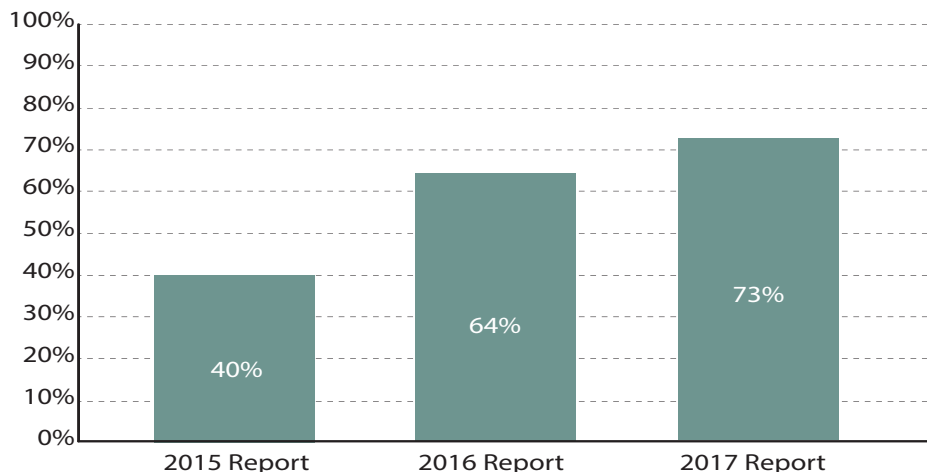

The statewide rate for this measure is 73 percent. **Table 11** displays the details of this statewide rate. **Figure 6** displays the statewide rate over time. The statewide rate increased by nine percentage points from 2016.

Data collected for this measure are submitted directly to MNMCM by medical groups from electronic health records or paper-based medical charts.

TABLE 11: STATEWIDE RATE FOR PEDIATRIC PREVENTIVE CARE: ADOLESCENT MENTAL HEALTH SCREENING

	Statewide Average (Weighted)	95% CI	Numerator (Patients who were screened)	Denominator (Patients Sampled)	Total Eligible
Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening	72.8%	72.6%-73.0%	99,790	137,033	137,128

FIGURE 6: PEDIATRIC PREVENTIVE CARE: ADOLESCENT MENTAL HEALTH SCREENING OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

Clinic Results

Highest Performers in 2017

Clinic results showed an average of 73 percent of pediatric patients ages 12-17 who had a documented mental health and/or depression screening at a well-child visit. **Twenty-four clinics** set the benchmark of 100 percent. There were 257 of 542 clinics with rates and confidence interval fully above the statewide average. The high performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates Top 15 performers for this measure based on unadjusted results.

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening (clinic results) was made by **North Clinic - Plymouth** whose score increased by over 90 percentage points, from 2 percent to 93 percent.

Clinic performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Eighty-four clinics achieved consistently high performance and above average rates over the past three years for Pediatric Preventive Care Adolescent Mental Health and/or Depression Screening:

AALFA Family Clinic	Children's Minnesota	Mayo Clinic Health System

- Sanford Sioux Falls USD Family Medicine

The remaining one hundred and eighteen clinics did not have a discernible pattern over three years.

Regional Clinic Results

Highest performers in 2017 by region

Clinic results showed differences in performance for Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below with the number of high-performing clinics shown along with the total number of clinics that submitted data. The high-performing clinics are listed under their medical group name in alphabetical order by region.

Medical Group Results

Highest Performers in 2017

Results by medical group showed an average of 73 percent of pediatric patients ages 12-17 who had a documented mental health and/or depression screening at a well-child visit. **Dakota Pediatrics, P.A., Duluth Family Medicine Clinic** and **North Metro Pediatrics** set the benchmark of 100 percent. There were 48 of 105 medical groups with rates and confidence interval fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted results.

- Dakota Pediatrics, P.A.*
- Duluth Family Medicine Clinic*
- North Metro Pediatrics*
- Fridley Children's & Teenagers' Medical Center - Children's Physician Network*
- Pediatric Services - Children's Physician Network

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening (medical group results) was made by **Mille Lacs Health System** whose score increased by 76 percentage points., from 1 percent to 77 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Twenty-four medical groups achieved consistently high performance and above average rates over the past three years for Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening:

AALFA Family Clinic	Eagan Valley Pediatrics	Pediatric Services - Children's
All About Children Pediatrics -	Fridley Children's & Teenagers'	Physician Network
Children's Health Network	Medical Center - Children's Physician	South Lake Pediatrics
Allina Health Clinics	Network	Southdale Pediatric Associates, Ltd
Allina Health Specialties	Gundersen Health System	St. Luke's Clinics
Cedar Riverside People's Center	HealthPartners Clinics	Stillwater Medical Group
CentraCare Health	Mankato Clinic, Ltd.	Wayzata Children's Clinic
Central Pediatrics	Mendakota Pediatrics Ltd	Winona Health Services
Children's Minnesota	North Metro Pediatrics	
Dakota Pediatrics, P.A.	Open Door Health Center	

Forty-two medical groups showed consistent improvement over three years:

Affiliated Community Medical	Hutchinson Health	Scenic Rivers Health Services
Centers	Lake Region Healthcare	Sibley Medical Center DBA
Alexandria Clinic	Lakewood Health System	Ridgeview Sibley Medical Center
Apple Valley Medical Clinic	Madelia Community Hospital &	Sleepy Eye Medical Center
Avera Medical Group	Clinic	Southside Community Health
Burnsville Family Physicians	Mayo Clinic Health System	Services
Community University Health Care	Multicare Associates	St. Croix Regional Medical Center
Center	Northfield Hospital + Clinics	Stevens Community Medical Center
Cuyuna Regional Medical Center	Olmsted Medical Center	Synergy Family Physicians, P.A
Dawson Clinic	Ortonville Area Health Services-	Tri-County Health Care
Entira Family Clinics (formerly	Northside Medical Clinic	Unity Family Healthcare, Family
Family Health Services MN)	Park Nicollet Health Services	Medical Center
Fairview Health Services	Prairie Ridge Hospital & Health	University of Minnesota Physicians
FirstLight Health System	Services	West Side Community Health
Gateway Family Health Clinic	Renville County Hospital and Clinics	Services
Glencoe Regional Health Services	Ridgeview Clinics	Williams Integracare Clinic
Grand Itasca Clinic	Sanford Health - Sioux Falls Region	
HealthEast Clinics	Sawtooth Mountain Clinic	

Three medical groups had rates that were relatively stable over three years:

Catalyst Medical Clinic
Parkview Medical Clinic - Minnesota Healthcare Network
Sanford Health - Fargo Region

No medical groups showed a consistent decrease over three years.

The remaining thirty-eight medical groups did not have a discernible pattern over three years.

Please see next page.

Pediatric Preventive Care: Overweight Counseling

The rapidly increasing prevalence of obesity among children is one of the most challenging dilemmas currently facing pediatricians. Body mass index (BMI) is a useful screening tool for assessing and tracking the degree of obesity among children and adolescents.

This measure assesses the percentage of pediatric patients ages 3-17 who had an overweight or obesity assessment at a well-child visit. If the BMI percentile was greater than or equal to 85, the patient had appropriate documentation of counseling for physical activity and nutrition.

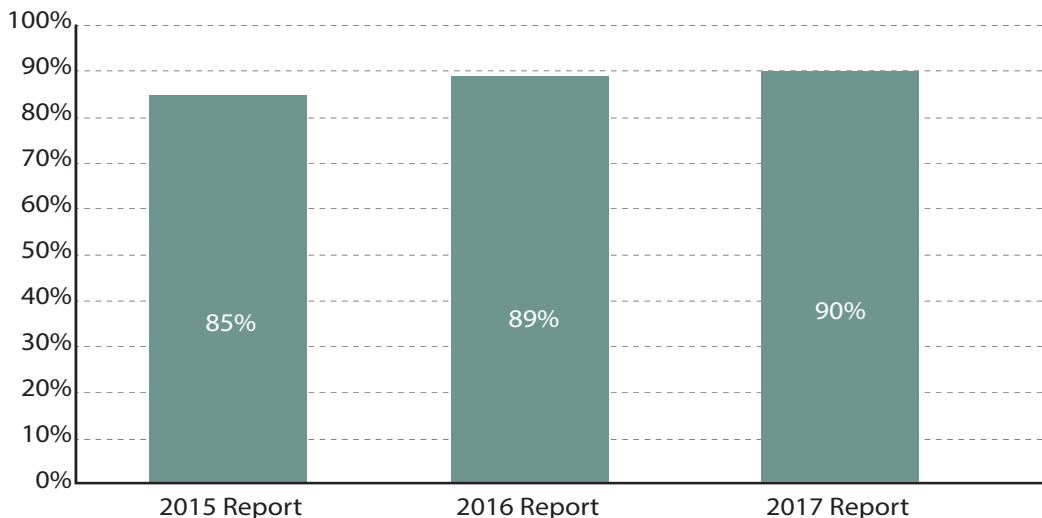

The statewide rate for this measure is 90 percent. **Table 12** displays the details of this statewide rate. **Figure 7** displays the statewide rate over time. The statewide rate increased by one percentage point from 2016.

Data collected for this measure are submitted directly to MNMCM by medical groups from electronic health records or paper-based medical charts.

TABLE 12: STATEWIDE RATE FOR PEDIATRIC PREVENTIVE CARE: OVERWEIGHT COUNSELING

	Statewide Average	95% CI	Numerator (Patients who received counseling)	Denominator (Patients Sampled)	Total Eligible
Pediatric Preventive Care: Overweight Counseling	89.9%	89.8% -90.1%	130,163	144,797	144,715

FIGURE 7: PEDIATRIC PREVENTIVE CARE: ADOLESCENT MENTAL HEALTH SCREENING OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

Clinic Results

Highest Performers in 2017

Clinic results showed an average of 90 percent of pediatric patients ages 3-17 had appropriate documentation of counseling for physical activity and nutrition if their BMI percentile from an overweight or obesity assessment was greater than or equal to 85. There were **77 clinics that set the benchmark of 100 percent**. There were 232 of 532 clinics with rates and confidence interval fully above the statewide average. The high performing clinics are listed below in alphabetical order under their medical group name. Due to the high number of clinics that achieved a rate of 100%, there is no Top 15 performer indication. High performing clinics are based on unadjusted results.

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Pediatric Preventive Care: Overweight Counseling (clinic results) was made by **Olmsted Medical Center - Preston Clinic** whose score increased by 97 percentage points, from 3 percent to 100 percent.

Clinic performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in clinics with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

One hundred and fifteen clinics achieved consistently high performance and above average rates over the past three years for Pediatric Preventive Care: Overweight Counseling:

The remaining one hundred and seventy-six clinics did not have a discernible pattern over three years.

Regional Clinic Results

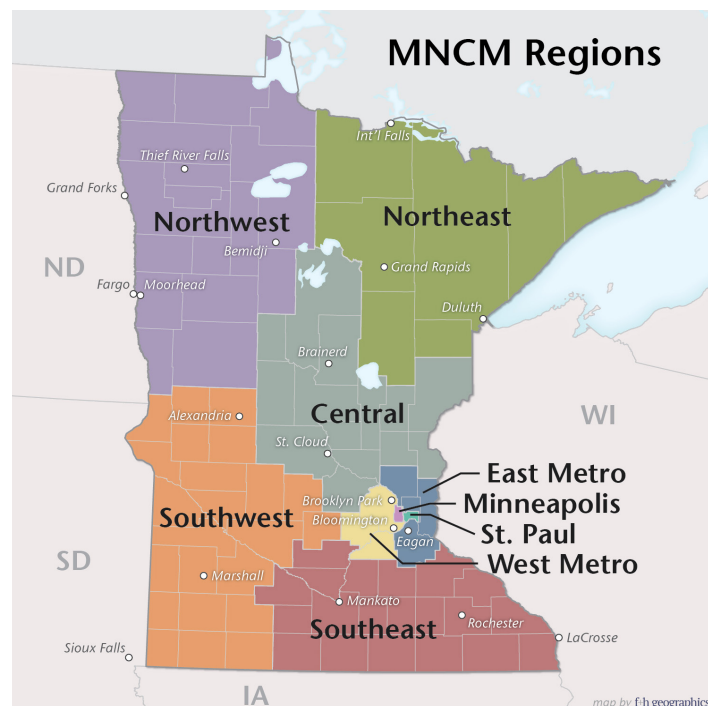

Highest performers in 2017 by region

Clinic results showed differences in performance for Pediatric Preventive Care: Overweight Counseling among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below with the number of high-performing clinics shown along with the total number of clinics that submitted data. The high-performing clinics are listed under their medical group name in alphabetical order by region.

Medical Group Results

Highest Performers in 2017

Results by medical group showed an average of 90 percent of pediatric patients ages 3-17 had appropriate documentation of counseling for physical activity and nutrition if their BMI percentile from an overweight/obesity assessment was greater than or equal to 85. **Nine medical groups** set the benchmark of 100 percent. There were 46 of 103 medical groups with rates and confidence interval fully above the statewide average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top performer for this measure based on unadjusted results.

- Affiliated Community Medical Centers

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Pediatric Preventive Care: Overweight Counseling (medical group results) was made by **Entira Family Clinics** whose score increased by 62 percentage points, from 30 percent to 93 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Twenty-eight medical groups achieved consistently high performance and above average rates over the past three years for Pediatric Preventive Care: Overweight Counseling:

Affiliated Community Medical Centers	Hennepin County Medical Center (HCMC) Clinics
Alexandria Clinic	Mankato Clinic, Ltd.
All About Children Pediatrics - Children's Health Network	Mayo Clinic
Allina Health Clinics	Mendakota Pediatrics Ltd
CentraCare Health	Native American Community Clinic
Central Pediatrics	North Clinic
Children's Minnesota	North Metro Pediatrics
Community University Health Care Center	NorthPoint Health & Wellness Center
Dakota Pediatrics, P.A.	Park Nicollet Health Services
Eagan Valley Pediatrics	South Lake Pediatrics
Fairview Mesaba Clinics	St. Luke's Clinics
Fridley Children's & Teenagers' Medical Center - Children's Physician Network	Synergy Family Physicians, P.A
Glencoe Regional Health Services	Unity Family Healthcare, Family Medical Center
	Wayzata Children's Clinic
	West Side Community Health Services

Fifteen medical groups showed consistent improvement over three years:

AALFA Family Clinic	Lakewood Health System
Avera Medical Group	Neighborhood Healthsource
Cuyuna Regional Medical Center	Olmsted Medical Center
FirstLight Health System	Ortonville Area Health Services-Northside Medical Clinic
Grand Itasca Clinic	Prairie Ridge Hospital & Health Services
Gundersen Health System	Sleepy Eye Medical Center
Lake Region Healthcare	St. Croix Regional Medical Center
Lake Superior Community Health Center	

One medical groups had rates that were relatively stable over three years:

Catalyst Medical Clinic

Two medical groups shows consistent decreases over three years:

Lac Qui Parle Clinic
Riverwood Healthcare Center

The remaining forty-two medical groups did not have a discernible pattern over three years.

SECTION II. EFFECTIVE CLINICAL CARE MEASURES

This section includes data for the following 30 measures of effective clinical care:

- **Controlling High Blood Pressure** - Measures the percentage of patients ages 18-85 who had a diagnosis of hypertension (HTN) and whose blood pressure was adequately controlled during the measurement year.
- **Depression measures** - Based on denominator of patients age 18 and older with major depression or dysthymia and initial PHQ-9 score greater than nine:
 - **Remission at Six Months** - Percentage of patients whose PHQ-9 score at six months is less than five.
 - **Response at Six Months** - Percentage of patients whose PHQ-9 score at six months decreased at least 50 percent from their initial score.
 - **PHQ-9 Follow-up at Six Months** - Percentage of patients who had a follow-up PHQ-9 test at six months from the index contact date.
 - **Depression Remission at 12 Months** - Percentage of patients whose PHQ-9 score at 12 months is less than five.
 - **Depression Response at 12 Months** - Percentage of patients whose PHQ-9 score at 12 months decreased at least 50 percent from their initial score.
 - **Depression PHQ-9 Follow-up at 12 Months** - Percentage of patients who had a follow-up PHQ-9 test at 12 months from the index contact date.
 - **PHQ-9 Utilization** - Percentage of patients who had a PHQ-9 completed during the measurement period.
- **Follow-Up Care for Children Prescribed ADHD Medication** - Measures the percentage of children 6-12 years old with a newly prescribed attention-deficit/hyperactivity disorder (ADHD) medication who had one follow-up visit with a practitioner with prescribing authority within 30 days of the first ADHD medication being dispensed.
- **Maternity Care: C-Section Rate** - Measures the percentage of live, singleton, vertex position, term newborns who were delivered via cesarean section to nulliparous women (first birth).
- **Optimal Asthma Control - Adults** - Measures the percentage of adults (ages 18-50) who have asthma and meet specified targets to control their asthma.
- **Optimal Asthma Control - Children** - Measures the percentage of children (ages 5-17) who have asthma and meet specified targets to control their asthma.
- **Optimal Diabetes Care** - Measures the percentage of adults who have type 1 or type 2 diabetes with optimally managed modifiable risk factors.
- **Optimal Vascular Care** - Measures the percentage of adults who have ischemic vascular disease (IVD) with optimally managed modifiable risk factors.
- **Use of Spirometry Testing in the Assessment and Diagnosis of COPD** - Measures the percentage of patients 40 years of age and older with a new diagnosis or newly active chronic obstructive pulmonary disease (COPD) who received appropriate spirometry testing to confirm the diagnosis.
- **Spinal Surgery: Lumbar Spinal Fusion measures**
 - Percentage of procedures with both pre-operative and one year post-operative Oswestry Disability Index (ODI) administered.
 - Average change in ODI at one year post-operative (functional status).
 - Percentage of procedures with both pre-operative and one year post-operative PROMIS Global Health (PGH) administered.
 - Average change in PGH Physical Health Status at one year post-operative (Health Related Quality of Life status).
 - Average change in PGH Mental Health Status at one year post-operative (Health Related Quality of Life status).
- **Spinal Surgery: Lumbar Discectomy/Laminotomy measures**
 - Percentage of procedures with both pre-operative and one year post-operative Oswestry Disability Index (ODI) administered.
 - Average change in ODI at one year post-operative (functional status).
 - Percentage of procedures with both pre-operative and one year post-operative PROMIS Global Health (PGH) administered.
 - Average change in PGH Physical Health Status at one year post-operative (Health Related Quality of Life status).
 - Average change in PGH Mental Health Status at one year post-operative (Health Related Quality of Life status).
- **Total Knee Replacement measures**
 - Percent of procedures with both pre-operative and one year post-operative Oxford Knee Score (OKS) administered.
 - Average change in OKS at one year post-operative (functional status).
 - Percentage of procedures with both pre-operative and one year post-operative PROMIS Global Health (PGH) administered.
 - Average change in PGH Physical Health Status at one year post-operative (Health Related Quality of Life status).
 - Average change in PGH Mental Health Status at one year post-operative (Health Related Quality of Life status).

Controlling High Blood Pressure

Hypertension, or high blood pressure, is associated with serious health effects, such as coronary heart disease, stroke, and retinopathy. Control of high blood pressure can substantially reduce the chance of complications and reduce the risk of developing other conditions.

This measure reflects the percentage of patients ages 18-85 with a diagnosis of hypertension whose blood pressure was adequately controlled based on the following criteria:

- Patients ages 18-59 whose blood pressure was less than 140/90 mmHg
- Patients ages 60-85 with a diagnosis of diabetes whose blood pressure was less than 140/90 mmHg
- Patients ages 60-85 without a diagnosis of diabetes whose blood pressure was less than 150/90 mmHg

The representative blood pressure is the most recent blood pressure reading during the measurement year (as long as the blood pressure reading occurred following the hypertension diagnosis).

The statewide rate for Controlling High Blood Pressure was 78 percent. **Table 13** displays the details of the 2017 rate. **Figure 8** displays the statewide rate over time. The statewide rate has increased by nearly two percentage points since 2016.

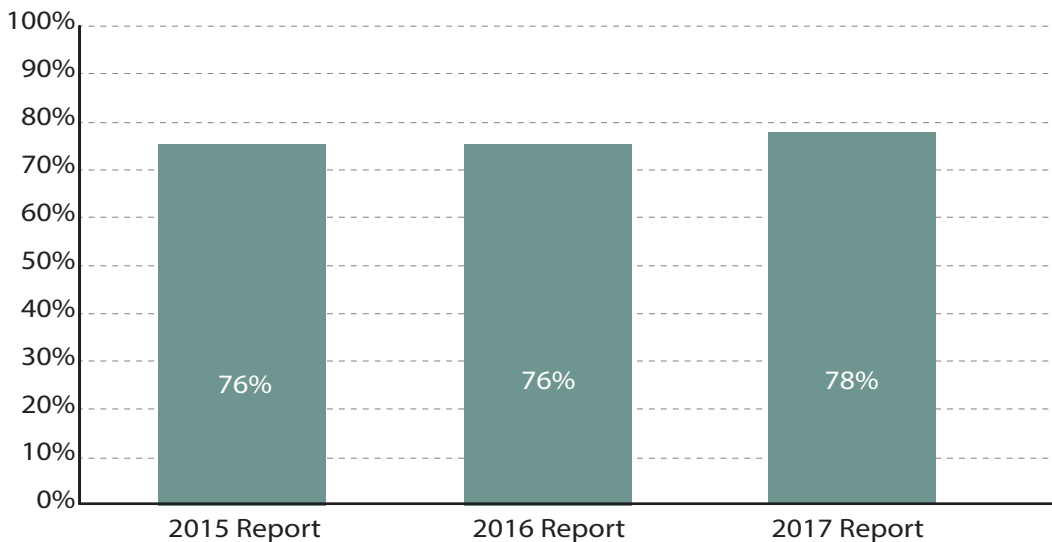

Data collected for this measure are from health plan claims and medical record review.

TABLE 13: STATEWIDE RATE FOR CONTROLLING HIGH BLOOD PRESSURE

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Controlling High Blood Pressure	77.5%	76.9%-78.2%	11,197	15,688	313,012

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 8: CONTROLLING HIGH BLOOD PRESSURE OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Medical Group Results

Highest Performers in 2017

The medical group average[^] showed that an average of 79 percent of patients with high blood pressure were appropriately controlled. **Northwest Family Physicians** set the benchmark of 94 percent. There were 12 of 67 medical groups with rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates Top 5 performer for this measure based on unadjusted results.

- Northwest Family Physicians*
- Mayo Clinic Health System - Mankato*
- Entira Family Clinics*
- Affiliated Community Medical Centers*
- Stellis Health, PA*
- St. Luke's Clinics
- Hutchinson Health
- Essentia Health
- Park Nicollet Health Services
- Fairview Medical Group
- Allina Health Clinics
- Allina Health Specialties

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Controlling High Blood Pressure (medical group results) was made by **Stevens Community Medical Center** whose rate increased by almost 24 percentage points, from 40 percent to 64 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Five medical groups achieved consistently high performance and above average rates over the past three years for Controlling High Blood Pressure:

Allina Health Clinics
Allina Health Specialties
Entira Family Clinics

Fairview Medical Group
Park Nicollet Health Services

[^]For HEDIS measures, the medical group average includes patients who are attributed to a medical group. Conversely, the statewide average includes all patients - those attributed to a medical group and those who are not.

Ten medical groups showed consistent improvement over three years:

FirstLight Health System	Northwest Family Physicians
HealthPartners Clinics	Olmsted Medical Center
Lake Region Medical Group PA	Raiter Clinic, LTD - IHN
Mayo Clinic Health System - Fairmont	St. Luke's Clinics
Mayo Clinic Health System - Mankato	
Mayo Clinic Health System - Red Wing	

One medical group had rates that were relatively stable over three years:

CentraCare Health

Four medical groups showed a consistent decrease over three years:

Mayo Clinic Health System - Waseca
Pipestone Family Clinic, Avera
Ridgeview Clinics
Sanford Health - Sioux Falls Region

The remaining forty-four medical groups did not have a discernible pattern over three years.

Please see next page.

Depression Remission, Response, and PHQ-9 Follow-Up at Six Months

Depression is a serious mental illness and affects over five percent of adult Americans on any given day. Depression is commonly associated with difficulty with performing daily activities. Treatment can help improve the symptoms of depression.

Depression **Remission** at Six Months is defined as the percentage of patients with major depression or dysthymia and an initial PHQ-9 score greater than nine whose PHQ-9 score at six months was less than five. The statewide rate for Depression **Remission** at Six Months is eight percent. **Table 14** displays the details of the statewide rate. **Figure 9** displays the statewide rates over time. The rate remained stable from 2016 to 2017.

Depression **Response** at Six Months is defined as the percentage of patients whose PHQ-9 score at six months decreased by at least 50 percent from their initial PHQ-9 score. The statewide rate for Depression **Response** at Six Months is 14 percent. **Table 14** displays the details of the statewide rate. **Figure 9** displays the statewide rates over time. The rate increased by one percentage point from 2016 to 2017.

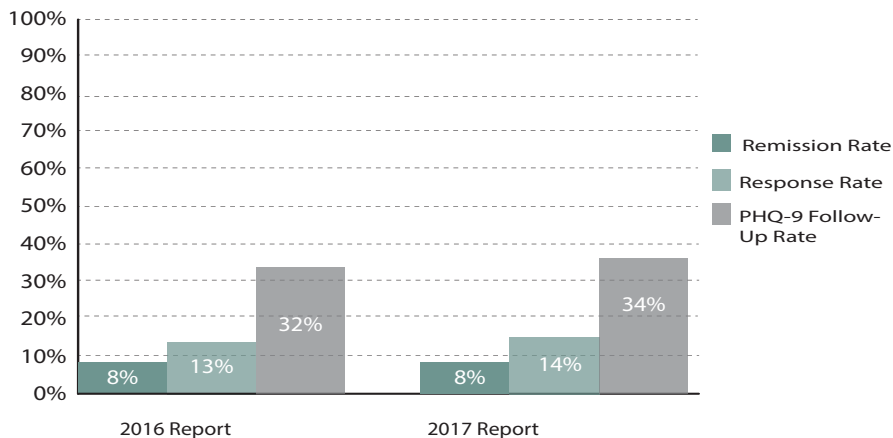

PHQ-9 Follow-up at Six Months is defined as the percentage of patients with a diagnosis of major depression or dysthymia and a PHQ-9 score at the index contact greater than nine who have a follow-up PHQ-9 test at six months from the index contact date. The statewide rate for PHQ-9 Follow-up at Six Months is 34 percent. **Table 14** displays the details of the statewide rate. **Figure 9** displays the statewide rates over time. The rate increased by two percentage points from 2016 to 2017.

Data collected for this measure are submitted directly to MNMCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 14: STATEWIDE RATE FOR DEPRESSION REMISSION, RESPONSE, AND PHQ-9 FOLLOW-UP AT SIX MONTHS

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Depression Remission at Six Months	7.9%	7.7%-8.1%	7,269	91,960
Depression Response at Six Months	13.5%	13.3%-13.8%	12,441	91,960
PHQ-9 Follow-Up at Six Months	33.8%	33.5%-34.1%	31,081	91,960

FIGURE 9: STATEWIDE RATES FOR DEPRESSION REMISSION, RESPONSE, AND PHQ-9 FOLLOW-UP AT SIX MONTHS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT SIX MONTHS

Clinic Results

Highest Performers in 2017

Clinic results showed an average of eight percent of patients with depression were in remission at six months (had a PHQ-9 score of less than five). **Entira Family Clinics - West St. Paul** set the benchmark of 34 percent. Based on risk adjusted results, there were 83 of 475 clinics with rates that were statistically above the expected result for their patient mix. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure based on risk adjusted results.

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Depression Remission at Six Months (clinic results) was made by **Allina Health - Prescott** whose score increased by 15 percentage points, from 4 percent to 19 percent.

Clinic performance over time (2015-2017)

Not applicable due to measure specification changes.

Regional Clinic Results

Highest performers in 2017 by region

Clinic results showed differences in performance for Depression Remission at Six Months among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below with the number of high-performing clinics shown along with the total number of clinics that submitted data. The high-performing clinics are listed under their medical group name in alphabetical order by region.

East Metro - 26 out of 85 (31 percent)

Medical Group Results

Highest Performers in 2017

Results by medical group showed an average of eight percent of patients with depression were in remission at six months (had a PHQ-9 score of less than five). **Park Nicollet Health Services** set the benchmark of 18 percent. Based on risk adjusted results, there were six of 100 medical groups with rates that were statistically above the expected result for their patient mix. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on risk adjusted results.

- Park Nicollet Health Services*
- Entira Family Clinics*
- CentraCare Health*
- Allina Health Clinics*
- HealthPartners Clinics*
- Sanford Health - Fargo Region

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Depression Remission at 6 Months (medical group results) was made by **Burnsville Family Physicians** whose score increased by nine percent from 3 percent to 12 percent.

Medical group performance over time (2015-2017)

Not applicable due to measure specification changes.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION RESPONSE AT SIX MONTHS

Clinic Results

Highest Performers in 2017

Clinic results showed that an average of 14 percent of patients with depression whose PHQ-9 score at six months decreased by at least 50 percent from their initial PHQ-9 score. **Park Nicollet Clinic - Eagan** set the benchmark of 43 percent. Based on risk adjusted results, there were 98 of 475 clinics with rates that were statistically above the expected result for their patient mix. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure based on risk adjusted results.

Regional Clinic Results

Highest Performers in 2017 by region

Clinic results showed differences in performance for Depression Response at Six Months among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below with the number of high-performing clinics shown along with the total number of clinics that submitted data. The high-performing clinics are listed under their medical group name in alphabetical order by region.

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in PHQ-9 Follow-up at Six Months (medical group results) was made by **Grand Itasca Clinic** whose score increased by 23 percentage points, from 9 percent to 32 percent.

Clinic performance over time (2015-2017)

Not applicable due to measure specification changes.

Please see next page.

Depression Remission, Response, and PHQ-9 Follow-Up at 12 Months

Depression **Remission** at 12 Months is defined as the percentage of patients with major depression or dysthymia and an initial PHQ-9 score greater than nine whose PHQ-9 score at 12 months was less than five. The statewide rate for Depression **Remission** at 12 Months is six percent. **Table 15** displays the details of the statewide rate. **Figure 10** displays the statewide rates over time. The rate increased by one percentage point from 2016 to 2017.

Depression **Response** at 12 Months is defined as the percentage of patients whose PHQ-9 score at 12 months decreased by at least 50 percent from their initial PHQ-9 score. The statewide rate for Depression **Response** at 12 Months is 11 percent. **Table 15** displays the details of the statewide rate. **Figure 10** displays the statewide rates over time. The rate increased by two percentage points from 2016 to 2017.

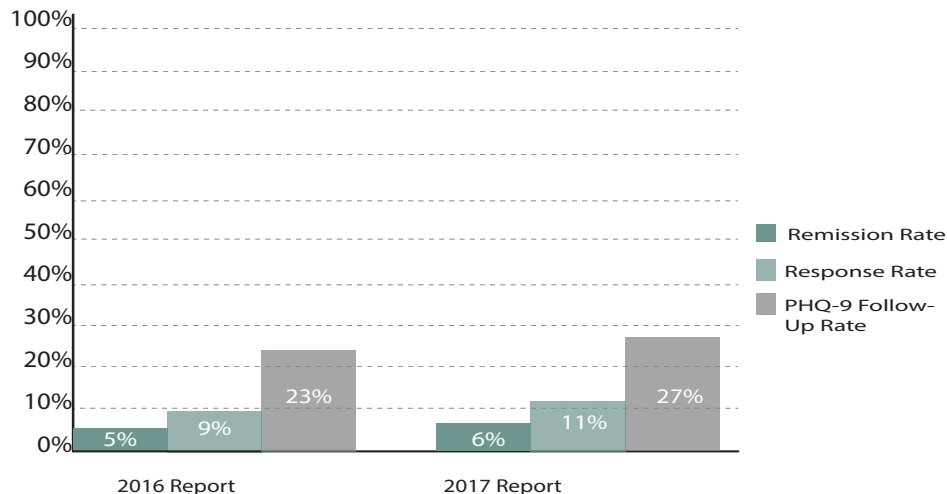

PHQ-9 Follow-up at 12 Months is defined as the percentage of patients with a diagnosis of major depression or dysthymia and a PHQ-9 score at the index contact greater than nine who have a follow-up PHQ-9 test at 12 months from the index contact date. The statewide rate for PHQ-9 Follow-up at 12 Months is 27 percent. **Table 15** displays the details of the statewide rate. **Figure 10** displays the statewide rates over time. The rate increased by four percentage points from 2016 to 2017.

Data collected for this measure are submitted directly to MNMCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 15: STATEWIDE RATE FOR DEPRESSION REMISSION, RESPONSE, AND PHQ-9 FOLLOW-UP AT 12 MONTHS

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Depression Remission at 12 Months	6.4%	6.3% - 6.6%	5,898	91,960
Depression Response at 12 Months	10.8%	10.6% - 11.0%	9,972	91,960
PHQ-9 Follow-Up at 12 Months	27.3%	27.1% - 27.6%	25,143	91,960

FIGURE 10: STATEWIDE RATES FOR DEPRESSION REMISSION, RESPONSE, AND PHQ-9 FOLLOW-UP AT 12 MONTHS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

PERFORMANCE HIGHLIGHTS FOR DEPRESSION REMISSION AT 12 MONTHS

Clinic Results

Highest Performers in 2017

Clinic results showed that an average of six percent of patients with depression were in remission at 12 months (had a PHQ-9 score of less than five). **Entira Family Clinics - West St. Paul** set the benchmark of 39 percent. Based on risk adjusted results, there were 73 of 475 clinics with rates that were statistically above the expected result for their patient mix. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure based on risk adjusted results.

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Depression Remission at 12 Months (clinic results) was made by **Entira Family Clinics - West St. Paul**, whose score increased by over 26 percentage points, from 13 percent to 39 percent.

Clinic performance over time (2015-2017)

Not applicable due to measure specification changes.

Regional Clinic Results

Highest performers in 2017 by region

Clinic results showed differences in performance for Depression Remission at 12 Months among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below with the number of high-performing clinics shown along with the total number of clinics that submitted data. The high-performing clinics are listed under their medical group name in alphabetical order by region.

- FirstLight Health System*
- Entira Family Clinics*
- Allina Health Clinics*
- Mankato Clinic, Ltd.*
- Allina Health Specialties
- Grand Itasca Clinic
- Olmsted Medical Center
- HealthPartners Clinics
- Park Nicollet Health Services
- CentraCare Health

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in PHQ-9 Follow-up at 12 Months (medical group results) was made by **FirstLight Health System**, whose score increased by more than 28 percentage points, from 21 percent to 50 percent.

Medical Group Performance over time (2015-2017)

Not applicable due to measure specification changes.

Please see next page.

PHQ-9 Utilization

Depression is an important public health issue with enormous health and economic effects. Patients who experience one episode of depression are likely to experience more episodes in the future. The US Preventive Services Task Force recommends screening for depression in all adults. The recommended approach to assessing the symptoms of patients with depression is to use the Patient Health Questionnaire (PHQ-9) tool.

PHQ-9 Utilization is defined as the percentage of the adult population with major depression or dysthymia who completed a PHQ-9 during the measurement period. This measure reflects the rate of the use of the PHQ-9 tool for the medical group’s population of patients with major depression or dysthymia.

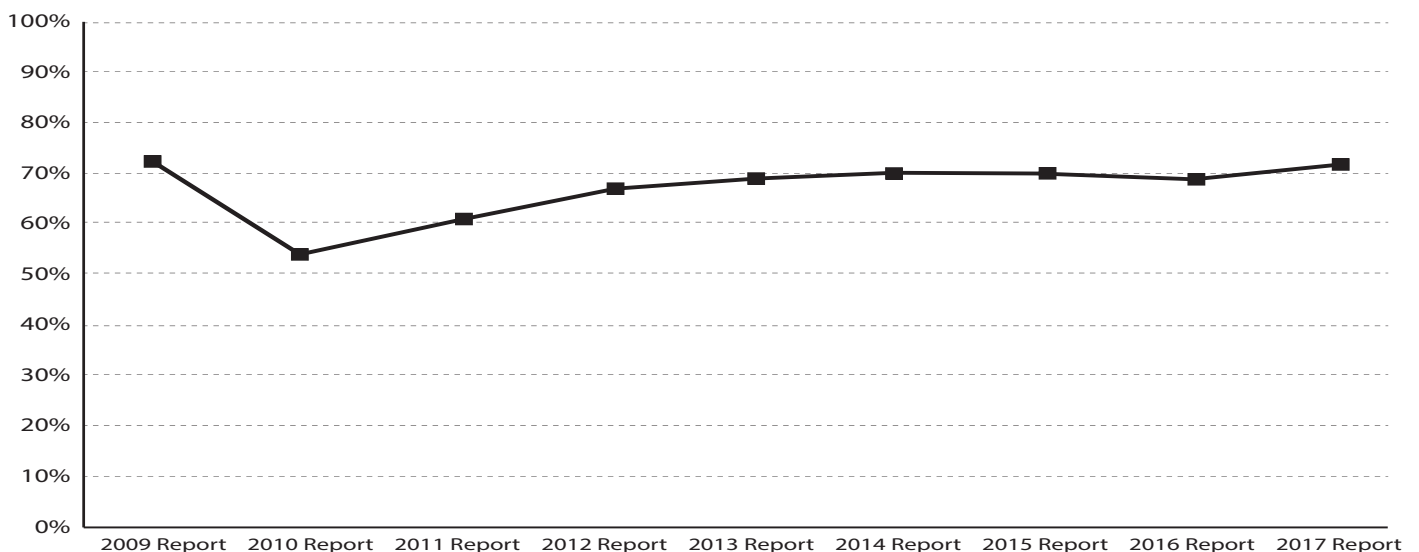

The statewide rate for PHQ-9 Utilization was 71 percent. **Table 16** displays the details of this statewide rate. **Figure 11** shows the PHQ-9 Utilization over time. The statewide rate decreased from 2009 to 2010; however, it increased steadily between 2010 and 2017. The rate increased by two percentage points from 2016 to 2017.

Data collected for this measure are submitted directly to MNMCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 16: STATEWIDE RATE FOR PHQ-9 UTILIZATION

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
PHQ-9 Utilization	70.7%	70.5%-70.9%	104,035	198,193

FIGURE 11: STATEWIDE RATES FOR PHQ-9 UTILIZATION OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

Clinic Results

Highest Performers in 2017

Clinic results showed an average of 71 percent of adult patients with major depression or dysthymia who completed a PHQ-9 during the measurement period. There were **7 clinics** that set the benchmark of 100 percent. There were 248 of 600 clinics with rates and confidence intervals fully above the statewide average. The Top 15 Performers (*) are listed below in alphabetical order under their medical group name.

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in PHQ-9 Utilization (clinic results) was made by **Rice Institute Outpatient**, whose score increased by more than 95 percentage points, from 4 percent to 100 percent.

Clinic Performance over time (2015-2017)

We reviewed the data to identify patterns of clinic performance in clinics with three years of data beginning in 2014. We looked for patterns of consistently high performance, consistent improvement, consistent decreases, and/or relative stability. The results are below in alphabetical order under their medical group name.

One hundred and thirty clinics achieved consistently high performance and above average rates over the past three years for PHQ-9 Utilization:

- AALFA Family Clinic
- Affiliated Community Medical Centers
 - Affiliated Community Medical Centers - Willmar Skylark Center
- Alexandria Clinic
 - Alexandria Clinic, A Service of Douglas County Hospital
- Allina Health Clinics
 - Allina Health - Bandana Square

The remaining two hundred and ten clinics did not have a discernible pattern over three years.

Regional Clinic Results

Highest performers in 2017 by region

Clinic results showed differences in performance for PHQ-9 Utilization among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below with the number of high-performing clinics shown along with the total number of clinics that submitted data. The high-performing clinics are listed under their medical group name in alphabetical order by region.

East Metro - 60 out of 96 (63 percent)

AALFA Family Clinic

- AALFA Family Clinic-MHN

Medical Group Results

Highest Performers in 2017

Medical group results showed an average of 71 percent of adult patients with major depression or dysthymia who had a PHQ-9 during the measurement period. There were **three medical groups** who set the benchmark of 100 percent. There were 44 of 120 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted results.

- Rice Institute Outpatient*
- Advanced Medical Clinic*
- Family Life Center*
- Boynton Health Service*
- Zumbro Valley Health Center*
- AALFA Family Clinic
- Oak Ridge Center

- Mayo Clinic

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in PHQ-9 Utilization (medical group results) was made by **Rice Institute Outpatient**, whose score increased by more than 95 percentage points, from 4 percent to 100 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Twenty-five medical groups achieved consistently high performance and above average rates over the past three years for PHQ-9 Utilization:

- | | | |
|---------------------------------|----------------------------------|----------------------------------|
| AALFA Family Clinic | Hospital & Medical Clinic | Olmsted Medical Center |
| Alexandria Clinic | Duluth Family Medicine Clinic | Ortonville Area Health Services- |
| Allina Health Clinics | Entira Family Clinics | Northside Medical Clinic |
| Allina Health Specialties | Fairview Health Services | Park Nicollet Health Services |
| Associated Clinic of Psychology | FirstLight Health System | Stillwater Medical Group |
| Boynton Health Service | Gundersen Health System | Woodland Centers |
| Burnsville Family Physicians | HealthPartners Clinics | Zumbro Valley Health Center |
| Catalyst Medical Clinic | Mankato Clinic, Ltd. | |
| CentraCare Health | Mayo Clinic | |
| Chippewa County Montevideo | Native American Community Clinic | |

Thirteen medical groups showed consistent improvement over three years:

- | | | |
|--|-------------------------------------|------------------------------------|
| Avera Medical Group | Riverwood Healthcare Center | Stevens Community Medical Center |
| Glencoe Regional Health Services | Sanford Health - Sioux Falls Region | Tri-County Health Care |
| Grand Itasca Clinic | Sibley Medical Center DBA | Western Mental Health Center, Inc. |
| People Incorporated Stark Mental Health Clinic | Ridgeview Sibley Medical Center | Williams Integracare Clinic |
| Richfield Medical Group | Southside Community Health Services | |

Three medical groups had rates that were relatively stable over three years:

- Dawson Clinic
- Gateway Family Health Clinic
- Mayo Clinic Health System

Five medical groups showed a consistent decrease over three years:

- | | | |
|-------------------------|-----------------------------|------------------------|
| Lake Region Healthcare | Mille Lacs Health System | United Family Medicine |
| Mental Health Resources | Northwest Family Physicians | |

The remaining forty-seven medical groups did not have a discernible pattern over three years.

Please see next page.

Follow-up Care for Children Prescribed ADHD Medication

Attention-deficit/hyperactivity disorder (ADHD) is one of the most common mental disorders in children and interferes with functioning or development. ADHD can continue into adulthood and can affect patients’ professional and personal life. ADHD medications can help control the symptoms.

This measure reflects the percentage of children newly prescribed ADHD medication who had at least one follow-up visit with a practitioner with prescribing authority within 30 days of when the first ADHD medication was dispensed.

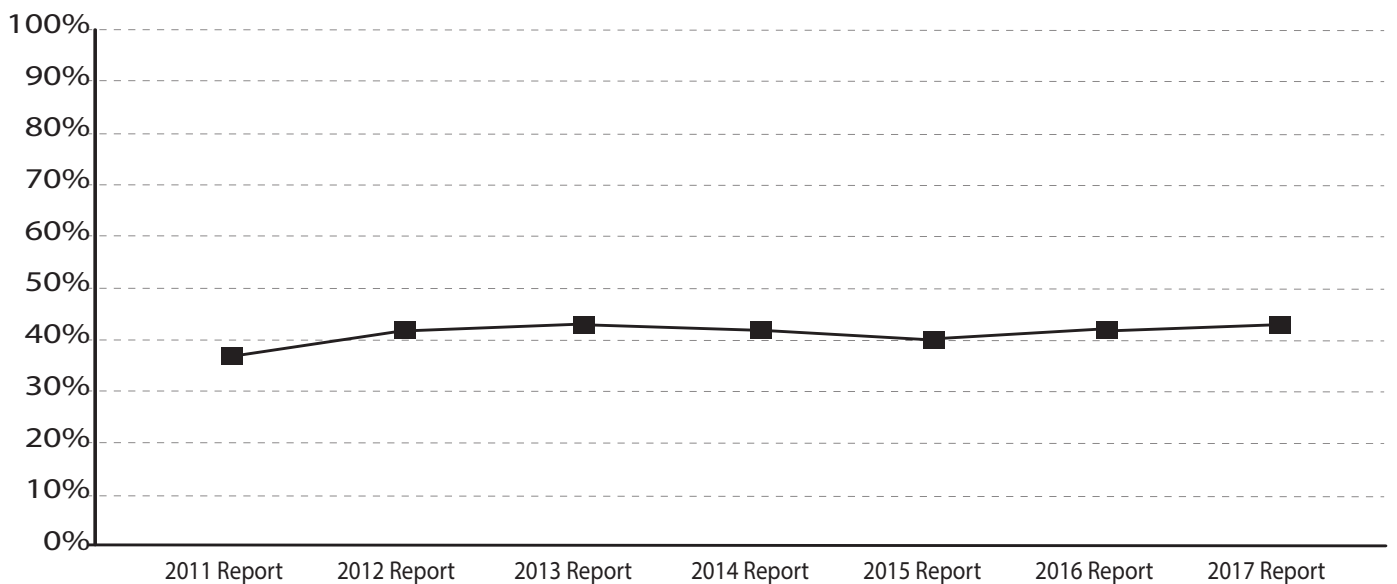

The statewide rate for Follow-up Care for Children Prescribed ADHD Medication is 43 percent. **Table 17** explains the details of the 2017 rate. **Figure 12** shows the average rate for this measure over time. The statewide rate increased by two percentage points from 2016 to 2017.

Data collected for this measure are from health plan claims.

TABLE 17: STATEWIDE RATE FOR FOLLOW-UP CARE FOR CHILDREN PRESCRIBED ADHD MEDICATION

	Statewide Average	95% CI	Numerator (Patients who received a follow-up visit)	Denominator
Follow-up Care for Children Prescribed ADHD Medication	42.7%	41.4%-43.9%	2,563	6,006

FIGURE 12: STATEWIDE RATES FOR FOLLOW-UP CARE FOR CHILDREN PRESCRIBED ADHD MEDICATION OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Medical Group Results

Highest Performers in 2017

The medical group average[^] showed 43 percent of patients had a follow-up visit if they were prescribed ADHD medication. **Grand Itasca Clinic** set the benchmark of 71 percent. There were six out of 39 medical groups with rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted results.

- Grand Itasca Clinic*
- Woodland Centers*
- Central Pediatrics*
- South Lake Pediatrics*
- Nystrom & Associates, Ltd.*
- Fairview Medical Group

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Follow-up Care for Children Prescribed ADHD Medication (medical group results) was made by **Central Pediatrics**, whose score increased by more than 25 percentage points, from 35 percent to 60 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in clinics with three years of data beginning in 2015. We looked for patterns of consistent high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

There were no medical groups that achieved consistently high performance and above average rates over the past three years for Follow-up Care for Children Prescribed ADHD Medication.

Two medical groups showed consistent improvement over three years:

Southdale Pediatric Associates, Ltd
South Lake Pediatrics

One medical group had a rate that was relatively stable over three years:

HealthPartners Clinics

One medical group showed consistent decreases over three years:

Mayo Clinic

The remaining eighteen medical groups did not have a discernible pattern over three years.

[^]For HEDIS measures, the medical group average includes patients who are attributed to a medical group. Conversely, the statewide average includes all patients - those attributed to a medical group and those who are not.

Maternity Care: C-section Rate

Cesarean deliveries can be life-saving and medically-necessary for mothers and children; however, the increased potential for complications, extended hospital stays and much higher costs mean it should be a last resort. The rate of C-sections have increased significantly since the late 1990s, which raises concerns about the appropriateness of the procedure.

This measure assesses the percentage of nulliparous women with a term, singleton baby in a vertex position delivered by cesarean section between July 1, 2016 and June 30, 2017 patients who had a C-section delivery. Any clinic that is part of a medical group in which the medical group has providers who perform cesarean deliveries were eligible to report data for this measure.

The statewide rate for Maternity Care: C-Section Rate was 23 percent (a lower rate is better for this measure).

Table 18 displays the details of this statewide rate. **Figure 13** shows the average rate for this measure over time.

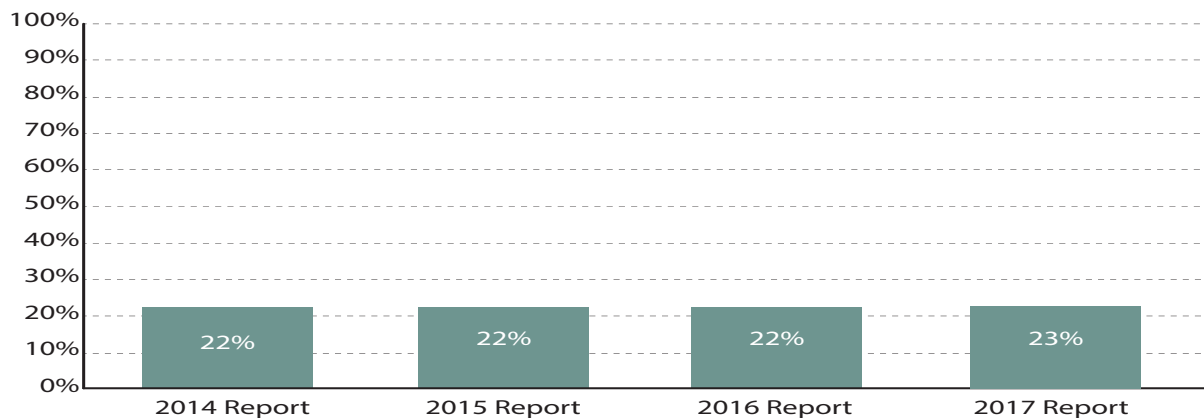

In maternity care, patients often seek care from multiple providers across locations within a medical group. Additionally, there are some providers who provide maternity care but may not perform c-sections, and patients who require a c-section are referred to a physician who does. Previous clinic level reporting of the maternity care measure did not include the deliveries performed by providers at a site without providers who performed c-sections, and as a result, rates for the state and at the medical group level had the potential to be artificially elevated. The maternity care measure is most appropriately calculated and reported at the medical group level in order to account for these considerations.

Data collected for this measure are submitted directly to MNMCM by medical groups from electronic health records or paper-based medical charts.

TABLE 18: STATEWIDE RATE FOR MATERNITY CARE: C-SECTION RATE

	Statewide Average	95% CI	Numerator (Patients who had a delivery via C-section)	Denominator (Deliveries)
Maternity Care: C-Section Rate	23.4%	22.8%-24.0%	4,457	19,037

FIGURE 13: STATEWIDE RATES FOR MATERNITY CARE: C-SECTION RATE

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Optimal Asthma Control - Adults

According to the CDC, about 25 million American have asthma. This is 7.6 percent of adults and 8.4 percent of children. Asthma has been increasing since the early 1980s in all age, sex and racial groups.

This measure reflects the percentage of patients ages 18-50 with persistent asthma who have reached the following two targets to control their asthma:

- Evidence of well-controlled asthma determined through the use of an asthma control tool (e.g. Asthma Control Test (ACT); Asthma Control Questionnaire (ACQ); and Asthma Therapy Assessment Questionnaire (ATAQ))
- Not at risk for elevated exacerbation as evidenced by patient-reported emergency department visits and hospitalizations

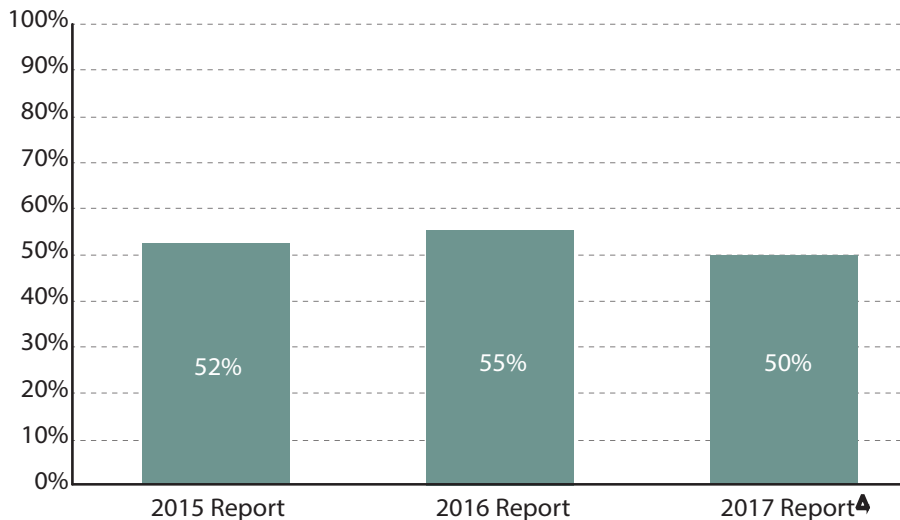

The statewide rate for Optimal Asthma Control is 50 percent for adults ages 18-50. **Table 19** displays the details of this statewide rate for both populations. **Figure 14** displays the statewide rate over time.

Data collected for this measure are submitted directly to MNMCM by medical groups and clinics from electronic health records or paper-based medical charts.

TABLE 19: STATEWIDE RATE FOR OPTIMAL ASTHMA CONTROL - ADULTS

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Optimal Asthma Control - Adults	49.5%	49.2%-49.7%	64,413	130,256	130,256

FIGURE 14: OPTIMAL ASTHMA CONTROL - ADULTS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

▲=The criteria for including patients in the measure denominator changed in 2017. This change may have contributed to the change in statewide rates for these measures.

Clinic Results

Highest Performers in 2017

Clinic results showed an average of 50 percent of adults ages 18-50 with asthma met all the required components in this measure. **St Paul Allergy & Asthma Clinic, P.A. Highland** set the benchmark of 96 percent. Based on risk adjusted results, there were 171 of 537 clinics with rates that were statistically above the expected result for their patient mix. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure based on risk adjusted results.

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Optimal Asthma Control - Adults (clinic results) was made by **Sanford Sioux Falls Internal Medicine Clinic** whose rate increased by almost 40 percentage points, from 46 percent to 86 percent.

Clinic performance over time (2015-2017)

We reviewed the data to identify patterns of clinic performance in clinics with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Eighty-five clinics achieved consistently high performance and above average rates over the past three years for Optimal Asthma Control - Asthma:

Regional Clinic Results

Highest performers in 2017 by region

Clinic results showed differences in performance for Optimal Asthma Control - Adults among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below with the number of high-performing clinics shown along with the total number of clinics that submitted data. The high-performing clinics are listed under their medical group name in alphabetical order by region.

East Metro - 41 out of 80 (51 percent)

Medical Group Results

Highest Performers in 2017

Results by medical group showed an average of 50 percent of adults ages 18-50 with asthma met all three required components of this measure. **St. Paul Allergy & Asthma Clinic, P.A.** set the benchmark of 100 percent. Based on risk adjusted results, there were 27 of 98 medical groups with rates that were statistically above the expected result for their patient mix. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on risk adjusted results.

- St. Paul Allergy & Asthma Clinic, P.A.*
- Advancements in Allergy and Asthma Care*
- Wayzata Children's Clinic*
- South Lake Pediatrics*
- Minnesota Allergy & Asthma Clinic, PA
- Children's Respiratory & Critical Care Specialists
- HealthPartners Central Minnesota Clinics*

- Affiliated Community Medical Centers
- Essentia Health
- Sanford Health - Fargo Region
- FirstLight Health System
- Mayo Clinic Health System

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Optimal Asthma Control - Adults (medical group results) was made by **Riverwood Healthcare Center** whose rate increased by over 36 percentage points, from 0 percent to 37 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Fourteen medical groups achieved consistently high performance and above average rates over the past three years for Optimal Asthma Control - Asthma:

- | | |
|--|--|
| Advancements in Allergy and Asthma Care | HealthPartners Central Minnesota Clinics |
| Affiliated Community Medical Centers | HealthPartners Clinics |
| Allergy & Asthma Specialists, PA | Mankato Clinic, Ltd. |
| Allina Health | Minnesota Allergy & Asthma Clinic, PA |
| Children's Respiratory & Critical Care Specialists | Park Nicollet Health Services |
| Fairview Health Services | South Lake Pediatrics |

Consistently High Performance

St. Paul Allergy & Asthma Clinic, P.A.
Wayzata Children's Clinic

Six medical groups had rates that showed consistent improvement over three years:

Community University Health Care Center
France Avenue Family Physicians - Minnesota
Healthcare Network
Mayo Clinic
RiverView Health

Sanford Health - Sioux Falls Region
Southside Community Health Services

Five medical groups had rates that were relatively stable over three years:

Altru Health System
Avera Medical Group
Hutchinson Health

North Clinic
NorthPoint Health & Wellness Center

Six medical groups had rates that consistently decreased over three years:

Northwest Family Physicians
Olmsted Medical Center
Open Door Health Center
Parkview Medical Clinic - Minnesota Healthcare
Network

United Family Medicine
Winona Health Services

The remaining forty-one medical groups had rates that showed no consistent pattern over three years.

Optimal Asthma Control - Children

According to the CDC, about 25 million American have asthma. This is 7.6 percent of adults and 8.4 percent of children. Asthma has been increasing since the early 1980s in all age, sex and racial groups.

This measure reflects the percentage of patients ages 5-17 with persistent asthma who have reached the following two targets to control their asthma:

- Evidence of well-controlled asthma determined through the use of an asthma control tool (e.g. Asthma Control Test (ACT); Childhood Asthma Control Test (C-ACT); Asthma Control Questionnaire (ACQ); and Asthma Therapy Assessment Questionnaire (ATAQ))
- Not at risk for elevated exacerbation as evidenced by patient-reported emergency department visits and hospitalizations

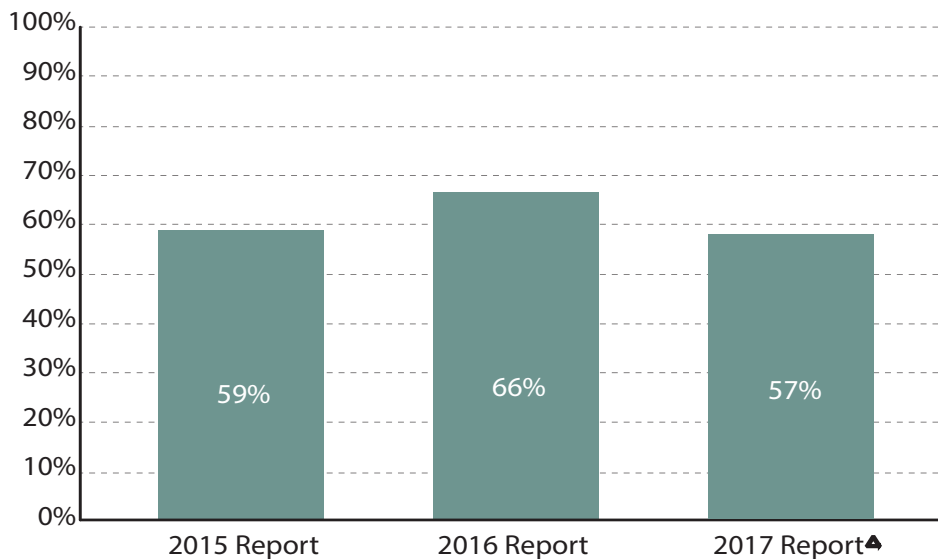

The statewide rate for Optimal Asthma Control is 57 percent for children ages 5-17. **Table 20** displays the details of this statewide rate. **Figure 15** displays the statewide rate over time.

Data collected for this measure are submitted directly to MNMCM by medical groups and clinics from electronic health records or paper-based medical charts.

TABLE 20: STATEWIDE RATE FOR OPTIMAL ASTHMA CONTROL - CHILDREN

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Optimal Asthma Control - Children	57.0%	56.6%-57.4%	38,911	68,284	68,284

FIGURE 15: OPTIMAL ASTHMA CONTROL - CHILDREN OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

▲ The criteria for including patients in the measure denominator changed in 2017. This change may have contributed to the change in statewide rates for these measures.

Clinic Results

Highest Performers in 2017

Clinic results showed an average of 57 percent of children ages 5-17 with asthma met all required components in this measure. **Advancements in Allergy and Asthma Care, Ltd.** set the benchmark of 94 percent. Based on risk adjusted results, there were 93 of 399 clinics with rates that were statistically above the expected result for their patient mix. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure based on risk adjusted results.

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Optimal Asthma Control - Children (medical group results) was made by **Lakewood Health System** whose rate increased by over 34 percentage points, from 31 percent to 66 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical groups performance in groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Ten medical groups achieved consistently high performance and above average rates over the past three years for Optimal Asthma Control - Children:

- | | |
|--|-------------------------------|
| Advancements in Allergy and Asthma Care | Mankato Clinic, Ltd. |
| Affiliated Community Medical Centers | Park Nicollet Health Services |
| CentraCare Health | South Lake Pediatrics |
| Children's Respiratory & Critical Care Specialists | Wayzata Children's Clinic |
| Fairview Health Services | |
| HealthPartners Clinics | |

Four medical groups showed consistent improvement over three years:

Alexandria Clinic
Mendakota Pediatrics Ltd
Sanford Health - Fargo Region
Sanford Health - Sioux Falls Region

One medical group had rates that were relatively stable over three years:

North Clinic

Eleven medical groups had rates that showed consistent decreases over three years:

All About Children Pediatrics - Children's Health Network
Allina Health Clinics
Eagan Valley Pediatrics
Glencoe Regional Health Services
Hutchinson Health
Northwest Family Physicians
Olmsted Medical Center
St. Luke's Clinics
United Family Medicine
West Side Community Health Services
Winona Health Services

The remaining thirty-three medical groups had rates that had no pattern over three years.

Optimal Diabetes Care

According to the Centers for Disease Control and Prevention (CDC), over 30 million adults aged 18 and older (12.2 percent of all U.S. adults) had diabetes in 2015. The percentage of adults with diabetes increases with age, reaching a high of 25 percent among people over 65 years of age. According to the American Diabetes Association, diabetes care that includes emphasis on blood pressure, lipids, glucose, aspirin use and non-use of tobacco will maximize health outcomes.

This measure reflects the percentage of patients with diabetes (Type 1 and Type 2) ages 18-75 who reached all five of the following treatment goals to reduce cardiovascular risk:

- Blood pressure less than 140/90 mmHg
- Hemoglobin A1c (HbA1c) less than 8
- On a statin medication, unless allowed contraindications or exceptions are present
- Daily aspirin use for diabetes patients with a co-morbidity ischemic vascular disease unless contraindicated
- Documented tobacco-free status

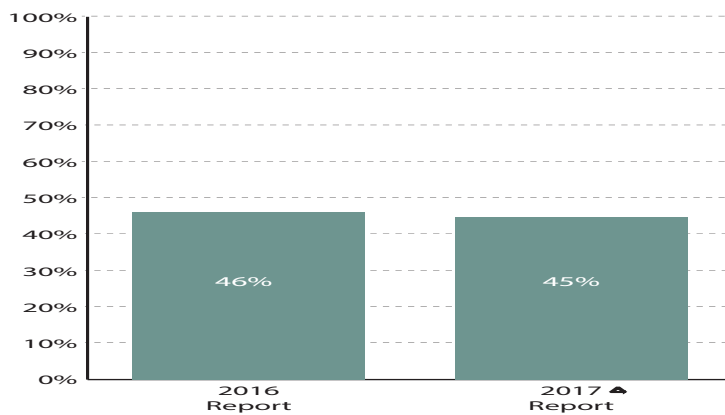

The statewide rate for Optimal Diabetes Care is 45 percent. **Table 21** displays the details of this statewide rate. **Figure 16** displays the details of this statewide rate.

Credit is given for achieving this composite rate when all five measure components are met. Data collected for this measure are submitted directly to MNMCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 21: STATEWIDE RATE FOR OPTIMAL DIABETES CARE

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients sampled)	Total Eligible
Optimal Diabetes Care	44.7%	44.6%-44.9%	132,106	295,049	295,049

FIGURE 16: OPTIMAL DIABETES CARE OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.
 ▲ The criteria for including patients in the measure denominator changed in 2017. This change may have contributed to the change in statewide rates for these measures.

Clinic Results

Highest Performers in 2017

Clinic results showed an average of 45 percent of patients with diabetes met all five required components in this measure. **Meeker Memorial Clinic** set the benchmark of 77 percent. Based on risk adjusted results, there were 149 of 604 clinics with rates that was statistically above the expected result for their patient mix. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure based on risk adjusted results.

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Optimal Diabetes Care (clinic results) was made by **Lake Region Healthcare - Barnesville Clinic** whose rate increased by 39 percentage points, from 0 percent to 39 percent.

Clinic performance over time (2015-2017)

Not applicable due to measure specification changes.

Clinic Regional Results

Highest performers in 2017 by region

Clinic results showed differences in performance for Optimal Diabetes Care among the different geographic regions in Minnesota. Boundaries of the nine regions were determined by synthesizing health care and geopolitical data, including from the Metropolitan Council and State of Minnesota. The results have been organized to identify areas of the state with the highest proportion of high-performing clinics. The nine regions are listed below with the number of high-performing clinics shown along with the total number of clinics that submitted data. The high-performing clinics are listed under their medical group name in alphabetical order by region.

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Optimal Diabetes Care (medical group results) was made by **Murray County Clinic** whose rate increased by 11 percentage points, from 35 percent to 46 percent.

Medical group performance over time (2015-2017)

Not applicable due to measure specification changes.

Optimal Vascular Care

Cardiovascular disease (CVD) is the leading cause of death for men and women in the United States. Considering the overall toll of cardiovascular disease, measures that assess clinical care performance are vital to reducing the negative impacts of CVD.

This measure reflects the percentage of patients ages 18-75 with vascular disease who reached these four treatment goals to reduce the risk of cardiovascular disease:

- Blood pressure less than 140/90 mmHg
- On a statin medication, unless allowed contraindications or exceptions are present
- Daily aspirin use
- Documented tobacco-free status

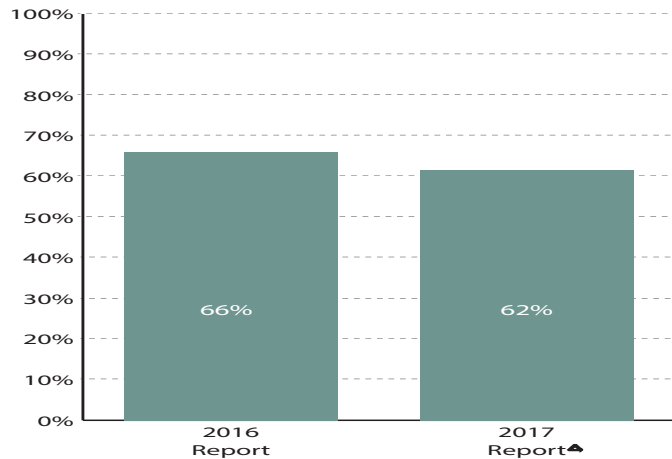

The statewide rate for Optimal Vascular Care is 62 percent. **Table 22** displays the details of this statewide rate. **Figure 17** displays the statewide rate over time.

Credit is given for achieving this composite rate when all four measure components are met. Data collected for this measure are submitted directly to MNMCM by medical groups/clinics from electronic health records or paper-based medical charts.

TABLE 22: STATEWIDE RATE FOR OPTIMAL VASCULAR CARE

	Statewide Average (Weighted)	95% CI	Numerator (Patients who met treatment goals)	Denominator (Patients Sampled)	Total Eligible
Optimal Vascular Care	61.6%	61.4%-61.8%	115,190	186,913	186,913

FIGURE 17: OPTIMAL VASCULAR CARE OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.
 ▲ The criteria for including patients in the measure denominator changed in 2017. This change may have contributed to the change in statewide rates for these measures.

Clinic Results

Highest Performers in 2017

Clinic results showed an average of 62 percent of patients with vascular disease met all four required components in this measure. **Fairview Lakeville Clinic** set the benchmark of 81 percent. Based on risk adjusted results, there were 87 of 563 clinics with rates that were statistically above the expected result for their patient mix. The high-performing clinics are listed below in alphabetical order under their medical group name. An asterisk (*) indicates a Top 15 performer for this measure based on risk adjusted results.

- Allina Health Clinics

Biggest improvement from 2016 – 2017

The largest improvement since report year 2016 in Optimal Vascular Care (medical group results) was made by **Open Cities Health Center** whose rate increased by 17 percentage points, from 7 percent to 24 percent.

Medical group performance overtime (2015 – 2017)

Not applicable due to measure specification changes.

Use of Spirometry Testing in the Assessment and Diagnosis of COPD

Chronic obstructive pulmonary disease (COPD) is the third leading cause of death in the United States and is irreversible. However, early detection allows risk factors to be addressed and more optimal treatment of the disease. Spirometry testing to diagnose COPD is recommended by the Global Initiative for Chronic Obstructive Lung Disease.

This measure reflects the percentage of patients age 40 and older with a new diagnosis or newly active COPD who received appropriate spirometry testing to confirm the diagnosis.

The statewide rate for Use of Spirometry Testing in the Assessment and Diagnosis of COPD is 39 percent. **Table 23** displays the details of the 2017 rate. **Figure 18** shows the average rate for this measure over time. The statewide rate peaked in 2012 at 40 percent and is slowly approaching this peak again.

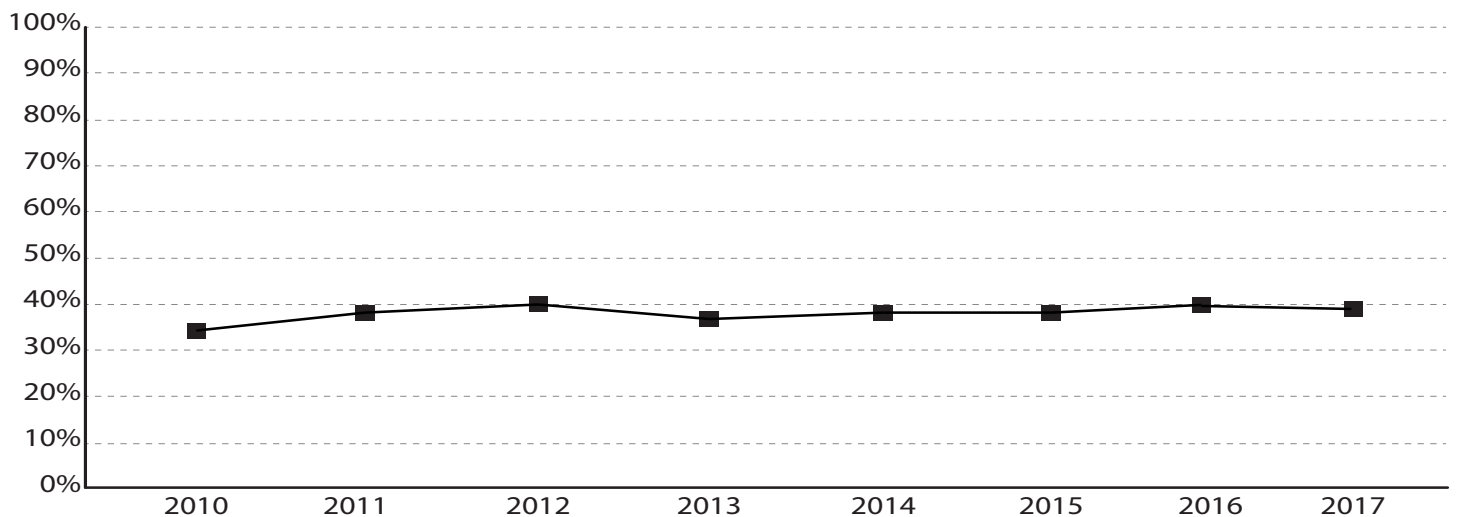

Data collected for this measure are from health plan claims.

TABLE 23: STATEWIDE RATE FOR USE OF SPIROMETRY IN THE ASSESSMENT AND DIAGNOSIS OF COPD

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Spirometry Testing in the Assessment and Diagnosis of COPD	39.2%	38.4%-40.1%	4,816	12,278

*Statewide Average (above) includes those patients attributed to a medical group AND those who could not be attributed to a medical group.

FIGURE 18: STATEWIDE RATES FOR USE OF SPIROMETRY TESTING IN THE ASSESSMENT AND DIAGNOSIS OF COPD OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Medical Group Results

Highest Performers in 2017

The medical group average[^] showed 41 percent of patients were given a spirometry test for the assessment and diagnosis of COPD. **Mayo Clinic** set the benchmark of 58 percent. There were seven of 44 medical groups with rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted results.

- Mayo Clinic*
- Mankato Clinic*
- North Memorial Clinic*
- Fairview Medical Group*
- Entira Family Clinics*
- Park Nicollet Clinic
- HealthPartners Clinics

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Use of Spirometry Testing in the Assessment and Diagnosis of COPD was made by **Raiter Clinic, LTD - IHN**, whose score increased by more than 17 percentage points, from 25 percent to 42 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Four medical groups achieved consistently high performance and above average rates over the past three years for Use of Spirometry Testing in the Assessment and Diagnosis of COPD:

Fairview Medical Group	Mayo Clinic
HealthPartners Clinics	Park Nicollet Health Services

Three medical groups showed consistent improvement over three years:

Gateway Family Health Clinic	Mankato Clinic, Ltd.
Hutchinson Health	

Three medical groups had rates that were relatively stable over three years:

Allina Health Clinics	Stellis Health, PA
Allina Health Specialties	

No medical groups showed a consistent decrease over three years.

The remaining twenty-eight medical groups did not have a discernible pattern over three years.

[^]For HEDIS measures, the medical group average includes patients who are attributed to a medical group. Conversely, the statewide average includes all patients - those attributed to a medical group and those who are not.

Spine Surgery: Lumbar Spinal Fusion

Lumbar spine fusion, permanently connecting two or more vertebrae, can be an effective procedure for many spine conditions, but may be less effective for some patients with degenerative disc disease. Patient-reported outcome tools are used to assess a patient's level of function, pain and health related quality of life (HRQoL) before surgery and can be used postoperatively to determine effectiveness and measure the patient's progress.

The eligible population for this measure are patients age 18 and older who underwent a lumbar spinal fusion procedure between January 1, 2015 and December 31, 2015. The following measures are reported in 2017:

- The percentage of patients with a lumbar spine fusion procedure who had an Oswestry Disability Index (ODI) assessment tool administered both pre-operatively (within three months prior to the procedure) and one year post-operatively (nine to 15 months after the procedure).
- Average post-operative functional status at one year for patients who underwent a lumbar spine fusion procedure as measured by the ODI assessment tool.
- The percentage of patients with a lumbar spine fusion procedure for patients who had an PROMIS Global Health (PGH) 10 assessment tool administered both pre-operatively (within three months prior to the procedure) and one year post-operatively (nine to 15 months after the procedure).
- Average post-operative physical health status at one year for patients who underwent a lumbar spine fusion procedure as measured by the PGH 10 assessment tool.
- Average post-operative mental health status at one year for patients who underwent a lumbar spine fusion procedure as measured by the PGH 10 assessment tool.

The statewide rate for administration of the ODI tool pre-operatively and post-operatively was 41 percent. **Table 24** displays the details of the statewide rate for this process measure. **Figure 19** displays the statewide rate over time.

The ODI assessment tool calculates a score based on the patient's answers to questions about their low back pain and function. The score can be between 0 and 100, where a higher score reflects a higher degree of disability. The statewide average change in score after Lumbar Fusion Surgery is 18.1 points (i.e. patients improved an average of 18 points on a 100 point scale), with medical groups ranging between 14.5 and 22.1 points. See **Table 26** for the details of this functional status measure. **Table 25** displays the statewide rate over time.

The statewide rate for administration of the PGH 10 tool (both Mental and Physical Health) pre-operatively and post-operatively was 26 percent. **Table 27** displays the details of the statewide rate for this process measure.

The PGH 10 assessment tool calculates a T-score based on the patient's answers to questions about their health related quality of life (HRQoL). The score can be between 16.2 and 67.7, where a higher score reflects higher health related quality of life. The statewide average change in score after surgery for Physical Health was 5.9 points, with medical groups ranging between 4.2 and 7.4 points. The statewide average change in score after surgery for Mental Health was 1.9 points, with medical groups ranging between 0.6 and 3.2 points. A higher number of points indicate greater improvement in a patient's health related quality of life after surgery. See **Table 28** for the details of the physical health status measure and **Table 29** for mental health status measure.

Data collected for this measure are submitted directly to MNCM by medical groups from electronic health records or paper-based medical charts.

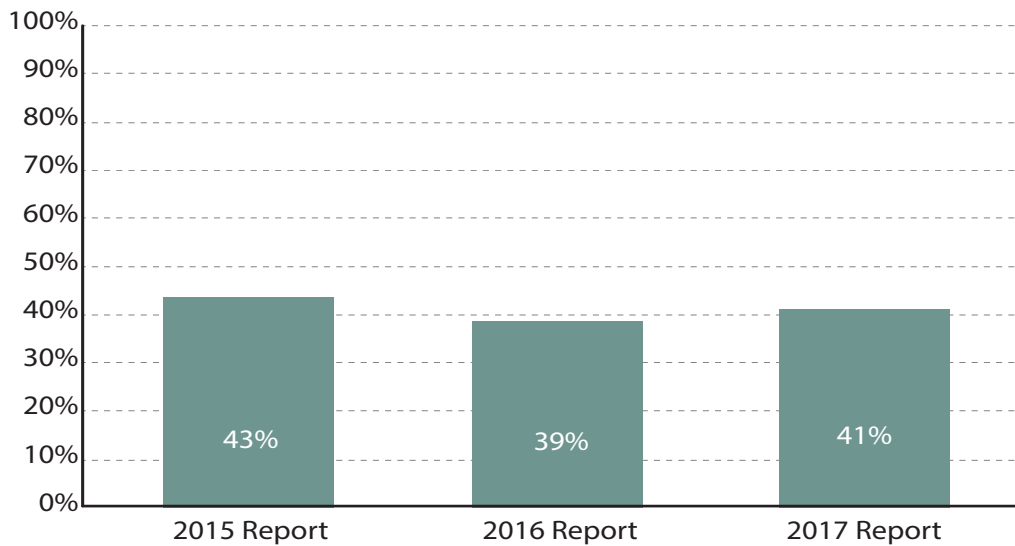

PERFORMANCE HIGHLIGHTS FOR LUMBAR SPINE FUSION FUNCTIONAL STATUS AT ONE YEAR

Medical Group Results

TABLE 24: STATEWIDE RATE FOR LUMBAR SPINE FUSION PRE-OP & POST-OP ODI AT ONE YEAR

	Statewide Average	95% CI	Numerator	Denominator
Lumbar Fusion Procedures With Pre-Op & Post-Op ODI at One Year	40.9%	38.9%-42.9%	970	2,372

FIGURE 19: LUMBAR FUSION PRE-OP AND POST-OP ODI AT ONE YEAR OVERTIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Highest Performers in 2017

Medical group results showed an average of 41 percent of patients with a Lumbar Spinal Fusion procedure had an ODI assessment tool administered both pre-operatively (within three months prior to the procedure) and post-operatively (within nine to 15 months after the procedure). **Twin Cities Spine Center** set the benchmark of 62 percent. There were two of 12 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance. No Top 5 performers are indicated for this measure based on unadjusted results.

- Twin Cities Spine Center
- Neurosurgical Associates, Ltd.

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Lumbar Spine Fusion with pre-op and post-op ODI at one year administration (medical group results) was made by **Essentia Health** whose score increased by almost 48 percentage points, from 0 percent to 48 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

One medical group achieved consistently high performance and above average rates over the past three years in administration of the ODI assessment tool pre-operative and post-operatively to patients who underwent a Lumbar Discectomy/Laminotomy procedure:

Twin Cities Spine Center

One medical group showed consistent improvement over three years:

MKMD Neurosurgery PLLC dba KIM Neurosurgery PLLC

One medical group showed a consistent decrease over three years:

University of Minnesota Physicians

No medical groups had rates that were relatively stable over three years.

The remaining four medical groups did not have a discernible pattern over three years.

TABLE 25: LUMBAR FUSION PRE-OP AND POST-OP ODI AT ONE YEAR OVER TIME

Year	Average Change in ODI at One Year Postop	Denominator
2017	18.1	970
2016	16.9	1,006

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

Medical group performance 2017

The following table displays medical group results for functional status at one year as measured by the ODI assessment tool. The medical groups are listed in order by risk-adjusted rating. The statewide average change in score after Lumbar Spinal Fusion Surgery was 18.1 points. **Neurosurgical Associates, Ltd.** had the largest improvement in functional status after lumbar spinal fusion, with an average score change of 22.1 points. There is no indication of Top performers due to there being fewer than 10 reportable medical groups for this measure.

TABLE 26: MEDICAL GROUP RESULTS FOR LUMBAR SPINAL FUSION FUNCTIONAL STATUS AT ONE YEAR

Medical Group Name	Result (Actual)	N (# used to calculate score)	Lower Bound of 95% CI	Upper Bound of 95% CI	Result (Expected)	Actual to Expected Ratio	Rating
STATEWIDE AVERAGE	18.1	970					
Neurosurgical Associates, Ltd.	22.1	42	16.2	28.1	19.2	1.2	Average
Essentia Health	20.6	83	15.5	24.7	18.7	1.1	Average
Sanford Health - Fargo Region	19.0	110	15.9	22.1	16.9	1.1	Average
Twin Cities Spine Center	18.0	457	16.4	19.7	18.2	1.0	Average
Mayo Clinic	17.1	69	13.4	20.7	17.6	1.0	Average
HealthPartners Clinics	14.5	97	10.5	18.6	18.9	0.8	Below Average

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Lumbar Spinal Fusion functional status (medical group results) was made by **HealthPartners Clinics** whose average change in functional status score improved by five points, from 10 points to 15 points.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

No medical groups achieved consistently high performance and above average rates over the past three years in average change of the ODI assessment tool pre-operative and post-operatively to patients who underwent a Lumbar Discectomy/Laminotomy procedure.

No medical groups showed consistent improvement over three years.

One medical group had rates that were relatively stable over three years:

Twin Cities Spine Center

No medical groups showed consistent decreases over three years.

The remaining two medical groups did not have a discernible pattern over three years.

PERFORMANCE HIGHLIGHTS FOR LUMBAR SPINE FUSION WITH PROMIS GLOBAL HEALTH 10 AT ONE YEAR

Medical Group Results

TABLE 27: STATEWIDE RATE FOR LUMBAR SPINE FUSION PRE-OP & POST-OP PROMIS GLOBAL HEALTH 10 AT ONE YEAR

	Statewide Average	95% CI	Numerator	Denominator
Lumbar Fusion Procedures With Pre-Op & Post-Op PROMIS 10 at One Year	25.8%	24.1%-27.6%	613	2,372

Highest Performers in 2017

Medical group results showed an average of 26 percent of patients with a Lumbar Spine Fusion procedure had an PROMIS 10 assessment tool administered both pre-operatively (within three months prior to the procedure) and post-operatively (within nine to 15 months after the procedure). **Essentia Health** set the benchmark of 42 percent. There were three of 12 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance. No Top 5 performers are indicated for this measure based on unadjusted results.

Medical group performance over time (2015-2017)

Not applicable since this a new measure.

Spine Surgery: Lumbar Discectomy/Laminotomy

Lumbar discectomy/laminotomy, removing herniated disc that is pressing on the nerve root or spinal cord, may be indicated if conservative methods are not successful. Patient-reported outcome tools help track the patient's progress, both before and after surgery.

The eligible population for this measure are patients age 18 and older who underwent a lumbar discectomy/laminotomy procedure for a diagnosis of disc herniation with the date of procedure between January 1, 2015 and December 31, 2015. The following measures are reported in 2017:

- The percentage of patients with a lumbar discectomy/laminotomy procedure who had an Oswestry Disability Index (ODI) assessment tool administered both pre-operatively (within three months prior to the procedure) and three months post-operatively (six to 20 weeks after the procedure).
- Average post-operative functional status at three months for patients who underwent a lumbar discectomy/laminotomy procedure as measured by the ODI assessment tool.
- The percentage of patients with a lumbar discectomy/laminotomy procedure who had an PROMIS 10 assessment tool administered both pre-operatively (within three months prior to the procedure) and three months post-operatively (six to 20 weeks after the procedure).
- Average post-operative physical health status at three months for patients who underwent a lumbar discectomy/laminotomy procedure as measured by the PROMIS Global Health (PGH) 10 assessment tool.
- Average post-operative mental health status at three months for patients who underwent a lumbar discectomy/laminotomy procedure as measured by the PROMIS Global Health (PGH) 10 assessment tool.

The statewide rate for administration of the ODI tool pre-operatively and post-operatively was 40 percent. **Table 30** displays the details of the statewide rate for this process measure. **Figure 20** displays the statewide ODI rate over time.

The ODI assessment tool calculates a score based on the patient's answers to questions about their low back pain and function. The score can be between 0 and 100, where a higher score reflects a higher degree of disability. The statewide average change in score after a Lumbar Discectomy/Laminotomy procedure was 26.3 points (i.e. patients improved an average of 26 points on a 100 point scale), with medical groups ranging between 23.8 and 31.0 points. See **Table 32** for the details of the functional status measure. **Table 31** displays the statewide ODI rate over time.

The statewide rate for administration of the PGH 10 tool (both Mental and Physical Health) pre-operatively and post-operatively was 23 percent. **Table 33** displays the details of the statewide rate for this process measure.

The PGH assessment tool calculates a T-score based on the patient's answers to questions about their health related quality of life. The score can be between 16.2 and 67.7, where a higher score reflects higher health related quality of life. The statewide average change in score after surgery for Physical Health was 9.0 points, with medical groups ranging between 6.5 and 11.6 points. The statewide average change in score after surgery for Mental Health was 3.6 points, with medical groups ranging between 2.7 and 6.3 points. A higher number of points indicate greater improvement in a patient's health related quality of life after surgery. See **Table 34** for the details of the physical health status measures and **Table 35** for the mental health status measures.

Data collected for this measure are submitted directly to MNMCM by medical groups from electronic health records or paper-based medical charts.

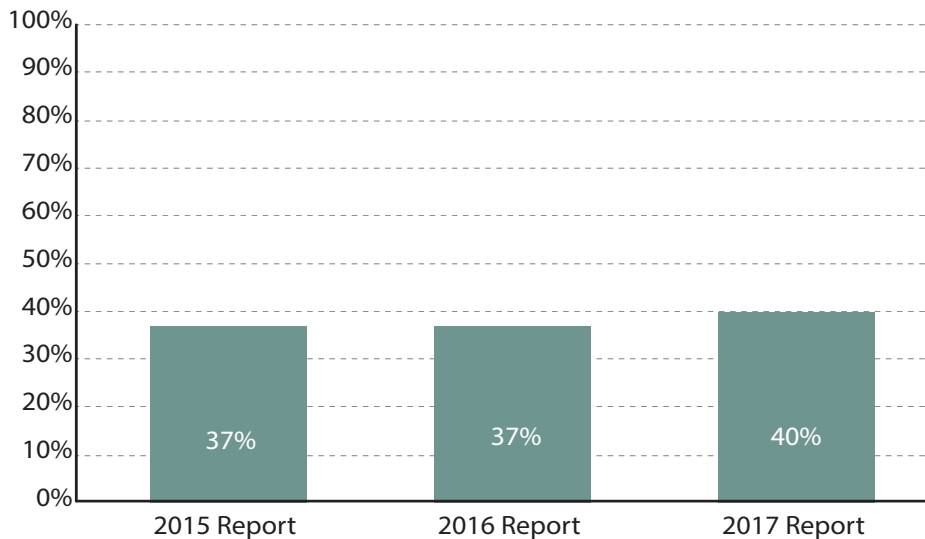

PERFORMANCE HIGHLIGHTS FOR LUMBAR DISCECTOMY/LAMINOTOMY FUNCTIONAL STATUS AT THREE MONTHS

Medical Group Results

TABLE 30: STATEWIDE RATES FOR LUMBAR DISCECTOMY/LAMINOTOMY PRE-OP AND POST-OP ODI AT THREE MONTHS

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Lumbar D/L Procedures with Pre-Op & Post-Op ODI at Three Months	39.9%	37.8%-42.0%	807	2,023

FIGURE 20: LUMBAR DISCECTOMY/LAMINOTOMY PRE-OP AND POST-OP ODI AT THREE MONTHS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Highest Performers in 2017

Medical group results showed an average of 40 percent of patients with a Lumbar Discectomy/Laminotomy procedure had an ODI assessment tool administered both pre-operatively (within three months prior to the procedure) and post-operatively (within six to 20 weeks after the procedure). **Sanford Health - Fargo Region** set the benchmark of 70 percent. There were four of 13 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance. No groups are considered top 5 performers.

- Sanford Health - Fargo Region
- Twin Cities Spine Center
- HealthPartners Clinics
- Park Nicollet Health Services

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Lumbar Discectomy/Laminotomy with pre-op and post-op ODI at three months was made by **Mayo Clinic** whose score increased by 22 percentage points, from 6 percent to 28 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Three medical groups achieved consistently high performance and above average rates over the past three years in administration of the ODI assessment tool pre-operative and post-operatively to patients who underwent a Lumbar Discectomy/Laminotomy procedure:

HealthPartners Clinics
Sanford Health - Fargo Region
Twin Cities Spine Center

One medical group showed consistent improvement over three years:

Park Nicollet Health Services

No medical groups had rates that were relatively stable over three years.

No medical groups showed consistent decreases over three years.

The remaining six medical groups did not have a discernible pattern over three years.

TABLE 31: LUMBAR DISCECTOMY/LAMINOTOMY PRE-OP AND POST-OP ODI AT THREE MONTHS OVER TIME

Year	Average Change in ODI at One Year Postop	Denominator
2017	26.3	807
2016	22.7	849

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

Medical group performance 2017

The following table displays medical group results for functional status at three months as measured by the ODI assessment tool. The medical groups are listed in order by risk-adjusted rating. The statewide average change in score after Lumbar Discectomy/Laminotomy Surgery was 26.3 points. **Mayo Clinic** had the largest improvement in functional status after surgery with an average score change of 31.0 points. There is no indication of Top performers due to there being fewer than 10 reportable medical groups for this measure.

TABLE 32: MEDICAL GROUP RESULTS FOR LUMBAR DISCECTOMY/LAMINOTOMY FUNCTIONAL STATUS AT THREE MONTHS

Medical Group Name	Result (Actual)	N (# used to calculate score)	Lower Bound of 95% CI	Upper Bound of 95% CI	Result (Expected)	Actual to Expected Ratio	Rating
STATEWIDE AVERAGE	26.3	807					
Mayo Clinic	31.0	48	26.4	35.7	25.3	1.2	Above Average
Neurosurgical Associates, Ltd.	30.1	62	25.6	34.6	24.9	1.2	Above Average
HealthPartners Clinics	30.3	46	24.5	36.1	27.9	1.1	Average
Essentia Health	26.2	88	24.3	39.5	26.8	1.0	Average

Twin Cities Spine Center	25.6	160	22.4	28.8	27.5	0.9	Average
Sanford Health - Fargo Region	23.8	138	20.3	27.4	27.9	0.9	Below Average

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Lumbar Discectomy/Laminotomy functional status (medical group results) was made by **HealthPartners Clinics** whose average change in functional status score improved by over 8 points, from 22 to 30 points.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

There were no medical groups that achieved consistently high performance and above average rates over the past three years in administration of the ODI assessment tool pre-operative and post-operatively to patients who underwent a Lumbar Discectomy/Laminotomy procedure.

There were no medical groups that showed consistent improvement over three years.

One medical group had rates that was relatively stable over three years:

Park Nicollet Health Services

There were no medical groups that showed consistent decreases over three years.

The remaining two medical groups did not have a discernible pattern over three years.

PERFORMANCE HIGHLIGHTS FOR LUMBAR DISCECTOMY/LAMINOTOMY PROMIS GLOBAL HEALTH 10 AT THREE MONTHS

Medical Group Results

TABLE 33: STATEWIDE RATE FOR LUMBAR SPINE DISCECTOMY/LAMINOTOMY PRE-OP & POST-OP PROMIS GLOBAL HEALTH 10 AT THREE MONTHS

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
Lumbar D/L Procedures with Pre-Op & Post-Op PROMIS at Three Months	23.1%	21.3%-25.0%	467	2,023

Highest Performers in 2017

Medical group results showed an average of 23 percent of patients with a Lumbar Discectomy/Laminotomy procedure had an PROMIS assessment tool administered both pre-operatively (within three months prior to the procedure) and post-operatively (within six to 20 weeks after the procedure). **Essentia Health** set the benchmark of 39 percent. There were three of 14 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance. No groups are considered top 5 performers.

- Essentia Health

Total Knee Replacement (TKR)

There are over 500,000 total knee replacement procedures performed each year. Due to the aging United States population, it is estimated that over 3 million procedures will be performed annually within the next fifteen years. Total knee replacement is used to help relieve pain and improve function in severely diseased and damaged knee joints. Patient-reported outcome (PRO) tools can show patients' improved functionality and quality of life following the procedures.

This is the third year of public reporting for the Total Knee Replacement functional status measure and the first year of public reporting for the Total Knee Replacement quality of life measures. The eligible population for this measure were patients age 18 and older who underwent a primary or revision total knee replacement procedure during the measurement period (January 1, 2015 to December 31, 2015). The following measures are reported in 2017:

- The percentage of patients with a total knee replacement (primary and revision) procedure who have an Oxford Knee Score (OKS) assessment tool administered both pre-operatively (within three months prior to the procedure) and one year post-operatively (nine to 15 months after the procedure).
- Average post-operative functional status at one year for patients who underwent a primary total knee replacement as measured by the OKS tool.
- The percentage of patients with a total knee replacement (primary and revision) procedure who have an PROMIS Global Health (PGH) 10 assessment tool administered both pre-operatively (within three months prior to the procedure) and one year post-operatively (nine to 15 months after the procedure).
- Average post-operative health related quality of life at one year for patients who underwent a primary total knee replacement as measured by the PROMIS Global Health 10 - Physical subscale tool.
- Average post-operative health related quality of life at one year for patients who underwent a primary total knee replacement as measured by the PROMIS Global Health 10 - Mental subscale tool.

The statewide rate for administration of the OKS tool pre-operatively and post-operatively was 26 percent. **Table 36** displays the details of the statewide rate for this process measure. **Figure 21** displays the statewide rate over time.

The OKS assessment tool calculates a score based on the patient's answers to questions about their knee pain and mobility. The score can be between 0 and 48, where a higher score reflects better knee function. The statewide average change in score after surgery was 16.6 points, with medical groups ranging between 15.2 and 19.2 points. A higher number of points indicate greater improvement in a patient's pain, function and mobility after surgery. See **Table 38** for the details of the functional status measure. **Table 37** displays the statewide rate over time.

The statewide rate for administration of the PGH tool (both Mental and Physical Health) pre-operatively and post-operatively was 20 percent. **Table 39** displays the details of the statewide rate for the process measure.

The PGH 10 assessment tool calculates a T-score based on the patient's answers to questions about their health related quality of life. The score can be between 16.2 and 67.7, where a higher score reflects higher health related quality of life. The statewide average change in score after surgery for Physical Health was 7.7 points, with medical groups ranging between 5.5 and 9.9 points. The statewide average change in score after surgery for Mental Health was 1.8 points, with medical groups ranging between 0.6 and 4.2 points. A higher number of points indicate greater improvement in a patient's health related quality of life after surgery. See **Table 40** for the details of the physical health status measure and **Table 41** for mental health status.

Data collected for this measure are submitted directly to MNCM by medical groups from electronic health records or paper-based medical charts.

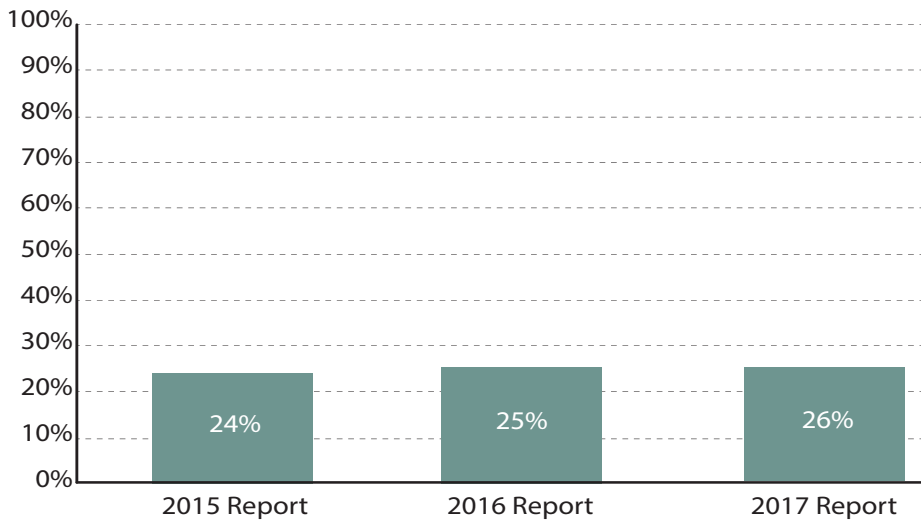

PERFORMANCE HIGHLIGHTS FOR TOTAL KNEE REPLACEMENT FUNCTIONAL STATUS AT ONE YEAR

Medical Group Results

TABLE 36: STATEWIDE RATE FOR NUMBER OF TKR WITH PRE-OP AND POST-OP PRO TOOLS ADMINISTERED

	Statewide Average	95% CI	Numerator (Patients who met treatment goals)	Denominator
TKR Procedures w/Pre-op & Post-op OKS	26.2%	25.5% - 27.0%	3,335	12,721

FIGURE 21: TOTAL KNEE REPLACEMENT WITH PRE-OP AND POST-OP OKS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Highest Performers in 2017

Medical group results showed an average of 26 percent of patients with a TKR procedure had an OKS assessment tool administered both pre-operatively (within three months prior to the procedure) and one year post-operatively (nine to 15 months after the procedure). **Little Falls Orthopedics** set the benchmark of 69 percent. There were 15 of 33 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance.

- FirstLight Health System
- Little Falls Orthopedics
- Southwest Minnesota Orthopedics and Sports Medicine
- Avera Medical Group
- Northern Orthopedics, Ltd.
- Olmsted Medical Center
- HealthPartners Clinics
- Stevens Community Medical Center
- The Orthopaedic & Fracture Clinic
- Winona Health Services
- Mayo Clinic Health System
- Fairview Health Services
- Allina Health Specialties
- Heartland Orthopedic Specialists
- Allina Health Clinics

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in administration of the OKS assessment tool pre-operatively and post-operatively at one year to patients who underwent a TKR procedure was made by **Olmsted Medical Center**. Their score increased by 45 percentage points.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Six medical groups achieved consistently high performance and above average rates over the past three years in administration of the OKS assessment tool pre-operative and post-operatively to patients who underwent a TKR procedure:

Allina Health Clinics
Little Falls Orthopedics
Mayo Clinic Health System
Northern Orthopedics, Ltd.

Southwest Minnesota Orthopedics and Sports
Medicine
The Orthopaedic & Fracture Clinic

Six medical groups showed consistent improvement over three years:

Fairview Health Services
HealthPartners Clinics
Heartland Orthopedic Specialists

Olmsted Medical Center
Park Nicollet Health Services
Stevens Community Medical Center

Five medical groups had rates that were relatively stable over three years:

Altru Health System
Community Memorial Hospital
Cuyuna Regional Medical Center

Hennepin County Medical Center (HCMC) Clinics
Minneapolis Orthopaedics

One medical group had rates that consistently decreased over three years:

Mayo Clinic

The remaining seven medical groups did not have a discernible pattern over three years.

PERFORMANCE HIGHLIGHTS FOR PRIMARY TKR FUNCTIONAL STATUS AT ONE YEAR

Medical Group Results

TABLE 37: TOTAL KNEE REPLACEMENT PRE-OP AND POST-OP OKS AT ONE YEAR OVER TIME

Year	Average Change in OKS at One Year Postop	Denominator
2017	16.6	3,196
2016	16.5	2,826

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors. See Appendix 8 - General Guidelines for Comparing MNMCM Results over Time.

The following table display medical group results for functional status for primary total knee replacement procedures at one year as measured by the OKS assessment tool. The medical groups are listed in order by risk-adjusted rating. The statewide average change in score was 16.6 points. **Olmsted Medical Center** had the greatest improvement in functional status at one year after a primary TKR procedure, with an average score change of 19.2 points. There is no indication of Top performers for this measure.

TABLE 38: MEDICAL GROUP RESULTS FOR PRIMARY TOTAL KNEE REPLACEMENT FUNCTIONAL STATUS AT ONE YEAR

Medical Group Name	Result (Actual)	N (# used to calculate score)	Lower Bound of 95% CI	Upper Bound of 95% CI	Result (Expected)	Actual to Expected Ratio	Rating

Allina Health Specialties	15.3	160	13.8	16.8	17.3	0.9	Average
Hutchinson Health	15.3	34	12.5	18.0	15.5	1.0	Average
Park Nicollet Health Services	15.2	322	14.2	16.2	15.3	1.0	Average
Fairview Health Services	15.2	102	13.3	17.0	17.7	0.9	Average
Allina Health Clinics	15.2	113	13.3	17.1	17.9	0.9	Below Average
Summit Orthopedics	14.9	93	12.9	16.9	16.3	0.9	Below Average
Lake Region Healthcare	13.7	36	10.9	16.5	15.7	0.9	Below Average

Biggest improvement from 2016-2017

The largest improvement since report year 2016 in Total Knee Replacement functional status (medical group results) was made by **Avera Medical Group** whose average change in functional status score improved by over two points, from 14 to 16 points.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Five medical groups showed rates that were relatively stable over the past three years in average change in Total Knee Replacement functional status:

- Heartland Orthopedic Specialists
- Mayo Clinic
- Mayo Clinic Health System
- Northern Orthopedics, Ltd.
- Sanford Health - Fargo Region

One medical group had rates that consistently decreased over three years:

- Lake Region Healthcare

The remaining seven medical groups did not have a discernible pattern over three years.

No medical groups had rates that consistently increased over three years.

PERFORMANCE HIGHLIGHTS FOR TKR PROMIS GLOBAL HEALTH 10 AT ONE YEAR

Medical Group Results

TABLE 39: STATEWIDE RATE FOR TOTAL KNEE REPLACEMENT PRE-OP & POST-OP PROMIS GLOBAL HEALTH 10 AT ONE YEAR

	Statewide Average	95% CI	Denominator
TKR Procedures w/Pre-op & Post-op PROMIS 10	19.9%	19.2% - 20.6%	2,531

Highest Performers in 2017

Medical group results showed an average of 20 percent of patients with a TKR procedure had an PROMIS assessment tool administered both pre-operatively (within three months prior to the procedure) and one year post-operatively (nine to 15 months after the procedure). **Southwest Minnesota Orthopedics and Sports Medicine** set the benchmark of 61 percent. There were 14 of 33 medical groups with rates and confidence intervals fully above the statewide average. The high-performing medical groups are listed below in order starting with the best performance.

- Southwest Minnesota Orthopedics and Sports Medicine
- Avera Medical Group
- HealthPartners Clinics
- Stevens Community Medical Center
- Olmsted Medical Center
- Northern Orthopedics, Ltd.
- The Orthopaedic & Fracture Clinic
- Mayo Clinic Health System
- Winona Health Services
- Affiliated Community Medical Centers
- Heartland Orthopedic Specialists
- Allina Health Specialties
- Park Nicollet Health Services
- Mayo Clinic

Biggest improvement from 2016-2017

The greatest improvement since report year 2016 in administration of the PROMIS assessment tool pre-operatively and post-operatively at one year to patients who underwent a TKR procedure was made by **Northern Orthopedics, Ltd.** Their score increased by 39 percentage points, from 10 percent to 49 percent.

Medical group performance over time (2015-2017)

Not applicable due to measure specification changes.

PERFORMANCE HIGHLIGHTS FOR PRIMARY TKR PHYSICAL HEALTH STATUS AT ONE YEAR

Medical Group Results

THERE IS NO TREND TABLE SINCE THIS IS A NEW MEASURE.

The following table display medical group results for quality of life - physical health status for primary total knee replacement procedures at one year as measured by the PROMIS assessment tool. The medical groups are listed in order by risk-adjusted rating. The statewide average change in score was 7.7 points. **Northern Orthopedics, Ltd.** had the greatest improvement in functional status at one year after a primary TKR procedure, with an average score change of 9.9 points. There is no indication of Top performers for this measure.

TABLE 40: MEDICAL GROUP RESULTS FOR PRIMARY TOTAL KNEE REPLACEMENT QUALITY OF LIFE - PHYSICAL HEALTH STATUS AT ONE YEAR

Medical Group Name	Result (Actual)	N (# used to calculate score)	Lower Bound of 95% CI	Upper Bound of 95% CI	Result (Expected)	Actual to Expected Ratio	Rating
STATEWIDE AVERAGE	7.7	2,421					
Northern Orthopedics, Ltd.	9.9	156	8.9	11.0	7.9	1.3	Above Average
The Orthopaedic & Fracture Clinic	9.4	273	8.6	10.3	7.8	1.2	Above Average
Avera Medical Group	9.3	75	7.7	10.9	7.6	1.2	Above Average

PERFORMANCE HIGHLIGHTS FOR PRIMARY TKR MENTAL HEALTH STATUS AT ONE YEAR

Medical Group Results

THERE IS NO TREND TABLE SINCE THIS IS A NEW MEASURE.

The following table display medical group results for quality of life - mental health status for primary total knee replacement procedures at one year as measured by the PROMIS assessment tool. The medical groups are listed in order by risk-adjusted rating. The statewide average change in score was 1.8 points. **Northern Orthopedics, Ltd.** had the greatest improvement in functional status at one year after a primary TKR procedure, with an average score change of 4.2 points. There is no indication of Top performers for this measure.

TABLE 41: MEDICAL GROUP RESULTS FOR PRIMARY TOTAL KNEE REPLACEMENT QUALITY OF LIFE - MENTAL HEALTH STATUS AT ONE YEAR

Medical Group Name	Result (Actual)	N (# used to calculate score)	Lower Bound of 95% CI	Upper Bound of 95% CI	Result (Expected)	Actual to Expected Ratio	Rating
STATEWIDE AVERAGE	1.8	2,421					
Northern Orthopedics, Ltd.	4.2	156	3.1	5.3	2.0	2.1	Above Average

Please see next page.

SECTION III. EFFICIENCY AND COST REDUCTION

This section includes data for the following two measures of efficiency and cost reduction:

- **Appropriate Treatment for Children with Upper Respiratory Infection (URI)** – Measures the percentage of children ages three months to 18 years of age with a diagnosis of URI who were not given an antibiotic prescription within three days of the episode period (July 1 of prior year to June 30 of measurement year). A higher rate represents better performance.
- **Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis** – Measures the percentage of adults 18-64 years of age with a diagnosis of acute bronchitis who were not dispensed an antibiotic prescription. A higher rate represents better performance.
- **Total Cost of Care** - The 2017 Total Cost of Care report can be found on MNCM.org. Cost measures can also be found on MNHealthScores.org.

Appropriate Treatment for Children with Upper Respiratory Infection (URI)

Upper respiratory infections (URI), also known as the common cold, are caused by viruses and not bacteria. These infections do not require antibiotics for patients to feel better. Appropriate use of antibiotics are an important strategy in reducing the spread of antibiotic-resistance bacteria.

This measure reflects the percentage of children ages three months to 18 years of age with a diagnosis of URI who were not given an antibiotic prescription within three days of the episode period (July 1 of prior year to June 30 of measurement year).

A higher rate indicates appropriate treatment (i.e., the proportion for whom antibiotics were not prescribed).

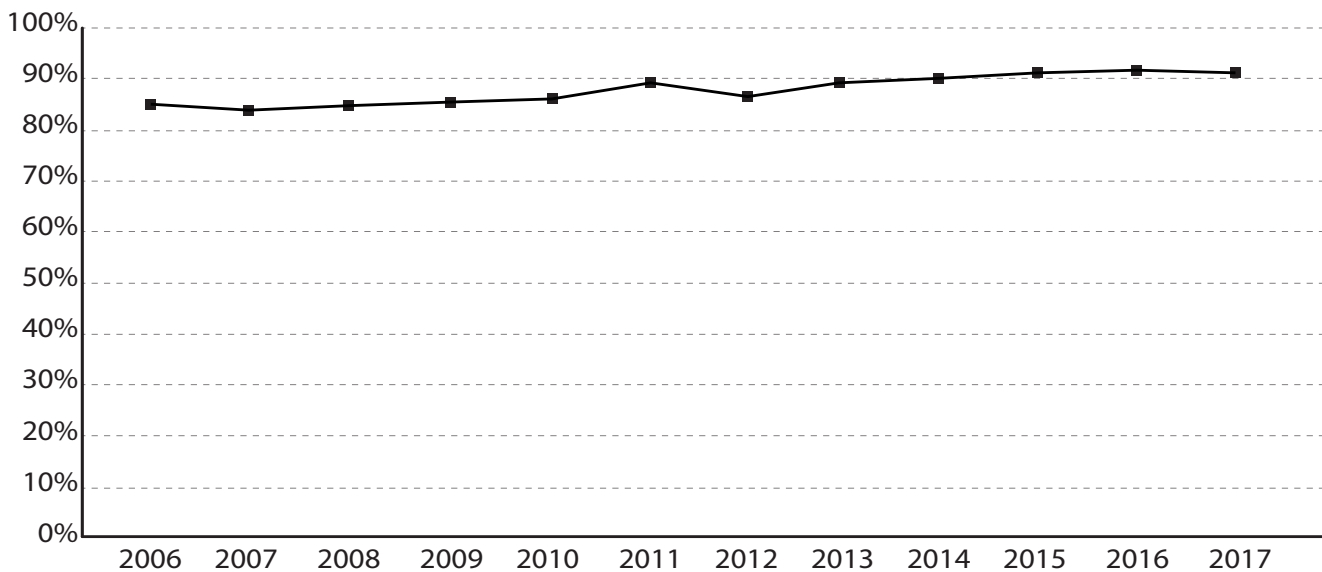

The statewide rate for Appropriate Treatment for Children with URI is 91 percent. **Table 42** displays the details of the 2017 rate. **Figure 22** shows the Appropriate Treatment for Children with URI over time. The statewide rate decreased by less than 0.5 percentage points, after increasing by 1 percentage point per year since 2012.

Data collected for this measure are from health plan claims.

TABLE 42: STATEWIDE RATE FOR APPROPRIATE TREATMENT FOR CHILDREN WITH URI

	Statewide Average	95% CI	Numerator	Denominator
Appropriate Treatment for Children with URI	91.3%	91.0%-91.6%	31,065	34,030

FIGURE 22: STATEWIDE RATES FOR APPROPRIATE TREATMENT FOR CHILDREN WITH URI OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Medical Group Results

Highest Performers in 2017

The medical group average[^] showed 92 percent of children ages three months to 18 years, with a diagnosis of URI, were appropriately managed without antibiotics. Five groups set the benchmark of 100 percent. There were 25 of 102 medical groups with rates and confidence intervals fully above the medical group average. The high-performing medical groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted results.

- FirstLight Health System*
- Mayo Clinic Health System - St. James*
- United Family Medicine*
- West Side Community Health Services*
- South Lake Pediatrics*
- University of Minnesota Physicians
- Stellis Health, PA
- MinuteClinic
- Priority Pediatrics Urgent Care
- NorthPoint Health & Wellness Center
- Wayzata Children's Clinic
- Children's Clinic Network
- Hennepin County Medical Center (HCMC) Clinics
- HealthEast Clinics
- Pediatric Services - Children's Physician Network
- Park Nicollet Health Services
- Central Pediatrics
- Fridley Children's & Teenagers' Medical Center - Children's Physician Network
- HealthPartners Clinics
- Emergency Physicians, P.A.
- Mayo Clinic
- Allina Health Clinics
- Allina Health Specialties
- Children's Health Care
- Fairview Medical Group

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Appropriate Treatment for Children with URI (medical group results) was made by **Scandia Clinic**, whose score increased by 18 percentage points, from 79 percent to 97 percent.

[^]For HEDIS measures, the medical group average includes patients who are attributed to a medical group. Conversely, the statewide average includes all patients - those attributed to a medical group and those who are not.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistent high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Twenty-two medical groups achieved consistently high performance and above average rates over the past three years for Appropriate Treatment for Children with URI:

Allina Health Clinics	HealthEast Clinics	Physician Network
Allina Health Specialties	HealthPartners Clinics	South Lake Pediatrics
Children's Clinic Network	Hennepin County Medical Center	Stellis Health, PA
Children's Health Care	(HCMC) Clinics	United Family Medicine
Emergency Physicians, P.A.	Mayo Clinic	University of Minnesota Physicians
Fairview Medical Group	MinuteClinic	Wayzata Children's Clinic
FirstLight Health System	NorthPoint Health & Wellness	West Side Community Health
Fridley Children's & Teenagers'	Center	Services
Medical Center - Children's	Park Nicollet Health Services	
Physician Network	Pediatric Services - Children's	

Eight medical groups showed consistent improvement over three years:

Altru Health System	Mayo Clinic Health System - St. James
Glenwood Medical Center	Murray County Clinic
Lakewood Health System	Scenic Rivers Health Services
Mayo Clinic Health System - Red Wing	Tri-County Health Care

Twelve medical groups had rates that were relatively stable over three years:

Affiliated Community Medical Centers	Mayo Clinic Health System - Mankato
Cedar Riverside People's Center	Multicare Associates
Entira Family Clinics (formerly Family Health Services MN)	North Memorial
Mayo Clinic Health System - Albert Lea and Austin	Riverwood Healthcare Center
Mayo Clinic Health System - Franciscan Healthcare in La Crosse	Sanford Health - Sioux Falls Region
	Suburban Emergency Associates
	Target Clinic

Three medical groups showed consistent decreases over three years:

Avera Medical Group- Marshall	RiverView Health
Northfield Hospital + Clinics	

The remaining forty-eight medical groups did not have a discernible pattern over three years.

Please see next page.

Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis

Acute bronchitis, also known as a chest cold, is normally caused by a virus or breathing in lung irritants, such as pollution. Patients with acute bronchitis generally get better without antibiotics and current guidelines by the Centers of Disease Control and Prevention recommend against antibiotic treatment. Appropriate treatment can help prevent further antibiotic resistance.

This measure reflects the percentage of adults ages 18–64 with a diagnosis of acute bronchitis who were not dispensed an antibiotic prescription. A higher rate indicates appropriate treatment of adults with bronchitis (i.e., the proportion for whom antibiotics were not prescribed).

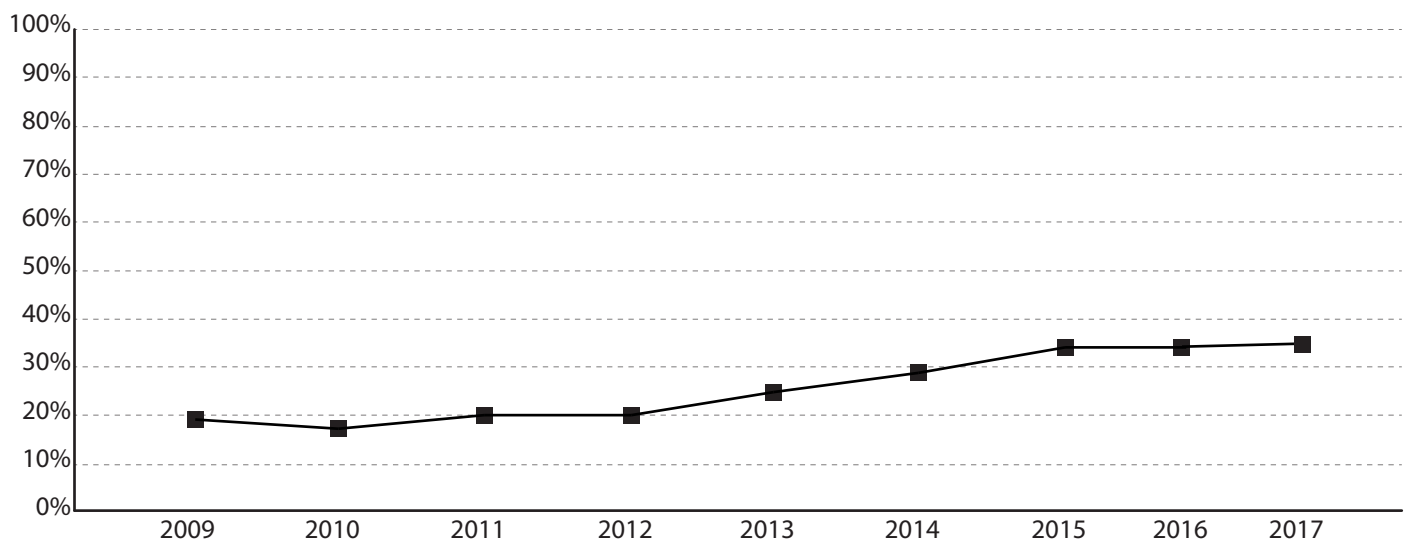

The statewide rate for Avoidance of Antibiotics in the Treatment of Adult Bronchitis is 34 percent. **Table 43** displays the details of the 2017 rate. **Figure 23** displays the statewide rates over time. The rate increased by less than one percentage point from 2016 to 2017 and has shown steady improvement since 2012.

Data collected for this measure are from health plan data claims.

TABLE 43: STATEWIDE RATE FOR AVOIDANCE OF ANTIBIOTIC TREATMENT IN ADULTS WITH ACUTE BRONCHITIS

	Statewide Average	95% CI	Numerator (Patients who did not receive an antibiotic)	Denominator
Avoidance of Antibiotics in the Treatment of Adult Bronchitis	34.4%	33.7%-35.2%	5,851	16,991

FIGURE 23: STATEWIDE RATES FOR AVOIDANCE OF ANTIBIOTIC TREATMENT IN ADULTS WITH ACUTE BRONCHITIS OVER TIME

Caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Medical Group Results

Highest Performers in 2017

Medical group results showed an average of 34 percent of adults ages 18-64 who were diagnosed with acute bronchitis were appropriately treated and not prescribed an antibiotic. **Minute Clinic** set the benchmark of 89 percent. Sixteen of 61 medical groups had rates and confidence intervals fully above the medical group average. These groups are listed below from high to low performance. An asterisk (*) indicates a Top 5 performer for this measure based on unadjusted rates.

- Minute Clinic Diagnostic, P.A.*
- HealthPartners Clinics*
- Stellis Health, PA*
- Northfield Urgent Care LLC
- Park Nicollet Clinic*
- Express Healthcare
- St. Croix Regional Medical Center
- University of Minnesota Physicians
- Hennepin County Medical Center (HCMC) Clinics
- North Memorial Clinic
- Winona Health Clinics
- Northwest Family Physicians
- St. Luke's Clinics
- Allina Health Clinics
- Allina Health Specialties
- HealthEast Clinics

Biggest improvement from 2016–2017

The largest improvement since report year 2016 in Avoidance of Antibiotics in the Treatment of Adult Bronchitis (medical group results) was made by **Northfield Urgent Care LLC**, whose score increased by more than 38 percentage points, from 27 percent to 65 percent.

Medical group performance over time (2015-2017)

We reviewed the data to identify patterns of medical group performance in medical groups with three years of data beginning in 2015. We looked for patterns of consistently high performance, consistent improvement, consistent decreases and/or relative stability. The results are below in alphabetical order.

Nine medical groups achieved consistently high performance and above average rates over the past three years for Avoidance of Antibiotics in the Treatment of Adult Bronchitis:

Express Healthcare	St. Luke's Clinics
HealthPartners Clinics	Stellis Health, PA
Hennepin County Medical Center (HCMC) Clinics	
MinuteClinic	
North Memorial	
Park Nicollet Health Services	
St. Croix Regional Medical Center	

Ten medical groups showed consistent improvement over three years:

Alexandria Clinic	Grand Itasca Clinic
Allina Health Specialties	HealthEast Clinics
Avera Medical Group- McGreevy Clinic, United Medical Center,	North Clinic
Worthington Speciality Clinic	Northfield Urgent Care LLC
France Avenue Family Physicians - Minnesota Healthcare	Unity Family Healthcare - Avon
Network	Winona Health Services

Three medical groups had rates that were relatively stable over three years:

Apple Valley Medical Clinic
Fairview Express Care
Mayo Clinic Health System - Fairmont

Four medical groups showed a consistent decrease over three years:

Emergency Physicians, P.A.
Glenwood Medical Center
Northfield Hospital + Clinics
Seven Day Clinic

The remaining twenty-seven medical groups did not have a discernible pattern over three years.

Please see next page.

SECTION IV. PATIENT EXPERIENCE OF CARE: CLINIC

Patient Experience encompasses the range of interactions that patients have with physician practices. As an integral component of health care quality, patient experience includes several aspects of health care delivery that patients value highly when they see and receive care; such as getting timely appointments, easy access to information, and good communication with health care providers.

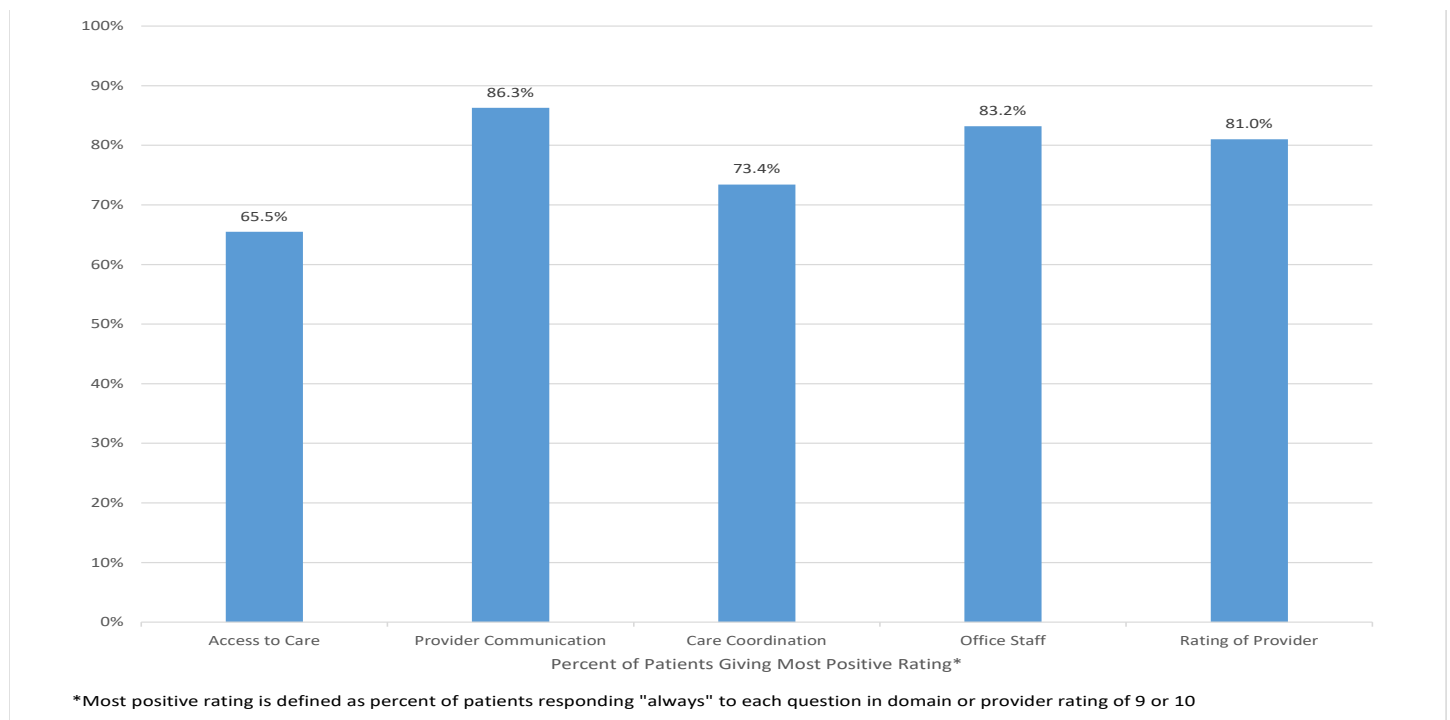

Understanding patient experience is a key step in moving toward patient-centered care. By looking at various aspects of patient experience, one can assess the extent to which patients are receiving care that is respectful of and responsive to individual patient preferences, needs and values.

To assess patient experience, one must find out from patients whether something that should happen in a health care setting (such as clear communication from the provider) actually happened and how often. Consumer Assessment of Healthcare Providers & Systems (CAHPS) surveys have become critical tools for organizations interested in assessing the patient-centeredness of the care they deliver and identifying areas for improvement.

In this report, five patient experience measures are generated from the Clinic & Group Consumer Assessment of Healthcare Providers & Systems (CG-CAHPS) 3.0 adult survey. The survey was distributed by certified survey vendors on behalf of clinics and submitted to MN Community Measurement in 2017. The dates of service for the Patient Experience measures were September 1, 2016 through November 30, 2016.

The five composite measures (i.e., domains) are reported as Top Box average scores. Each Top Box average domain score was the percent of patients (i.e., survey respondents) calculated who answered the domain questions with the most positive response (e.g., "Always" or rated their provider 9 or 10).

FIGURE 24: PATIENT EXPERIENCE OF CARE STATEWIDE RESULTS

There were 25 clinics whose overall average across all responses was significantly higher in each of five domains when compared to the overall average of all other clinics. The 25 clinics rated above average in 2017 were spread across several regions of the state, were spread across different specialties and were from both larger and smaller clinic systems. Conversely, the 39 high ranking clinics from 2015 were generally located in the Minneapolis/West Metro area and were from larger clinic systems.

Highest Performers in 2017

The clinics listed below are significantly higher in their overall domain averages (across all response options) than their peers for all five domains. The clinics are listed alphabetically by their medical group name.

- | | |
|--|---|
| Allina Health Clinics | • HealthEast Downtown St. Paul Clinic |
| • Allina Health - Ramsey | • HealthEast Midway Clinic |

APPENDIX 1

Highest Performers in 2017 by Medical Group Type for Clinical Measures

The following **tables 44-47** list the high-performing medical groups by specialty type based on the applicable clinical measures on which they were reported. These groups had above-average rates on most clinical measures.

Eight primary care medical groups achieved rates that were above average more frequently than others. Each of these medical groups achieved above-average rates on more than half of the clinical measures for which they were reportable.

TABLE 44: HIGH PERFORMING MEDICAL GROUPS IN 2017 - PRIMARY CARE

Measure	Park Nicollet Health Services 22 out of 25	Allina Health 21 out of 25	Health Partners Clinics 21 out of 25	Entira Family Clinics 15 out of 25	CentraCare Health 14 out of 25	Mankato Clinic 14 out of 25	Fairview Health Services 14 out of 25	Stillwater Medical Group 8 out of 15

APPENDIX 2

Acknowledgements

The *2017 Health Care Quality Report* is a collaborative effort led by MN Community Measurement on behalf of the Minnesota health care community and the broader public. We would like to acknowledge the contributions of all organizations that shared their resources, and the individuals who shared their time and expertise to make this report possible. We offer our sincerest thanks to:

The health plans and county-based purchasing organizations that contributed data for this report: Blue Cross and Blue Shield of Minnesota, HealthPartners, Hennepin Health, Itasca Medical Care, Medica, PreferredOne, PrimeWest, Sanford Health Plan, South Country Health Alliance, and UCare.

The medical groups and clinics that submitted data for this report: Names are listed on pages 201-202.

The Data Planning Committee, (delivering technical guidance on measure specifications and data collection): Alex Tava, Anne Grimmus, Annette Bauman, Bethany Krafthefer, Brittney Lind, Christopher Henderson, Jeremy Wilson, Jonathon Moon, Justin Smith, Kristen Lambert, Lisa Deml, Lynnell Curtis, Margareth Ranheim, Myranda Erickson, Naqwai Davis, Nicole Stenstrom, Paul Williams, Rachel Woods, Sarah Cook-Burton, Sarah Duell, Sarah Pianka, Shane Troumbly, Sherri Ryan, and Tracy Kueter.

The members of all measure development committees who contributed their time and expertise in developing new measures.

The Measurement and Reporting Advisory Committee, (providing expertise in reporting policy and measure selection): Barb Anderson, Janet Avery, Joe Bianco, Cara Broich, Howard Epstein, Matt Flory, Stefan Gildemeister, Greg Hanley, Tim Hernandez, David Homans, Jordan Kautz, Sue Knudson, Deb Krause, Robert Lloyd, Bill Nersesian, Chris Norton, Rahshana Price-Isuk, Jeff Rank, Jonathan Rose, Allan Ross, Laura Saliterman, David Satin, and Mark Sonneborn.

The MN Community Measurement Board of Directors, (granting organizational oversight and leadership support): Craig Acomb, Beth Averbeck, Cara Broich, Stacia Cohen, Kevin Croston, Bentley Graves, Lynn Hassan Jones, Tim Hernandez, David Homans, Pam Houg, Larry Lee, Lawrence Massa, Paul Mattessich, Mark Matthias, Rober Meiches, Chris Norton, Ekta Prakash, Jim Schowalter, Melissa Vaughn, Mary Ellen Wells, Brian Whited, and Marie Zimmerman.

APPENDIX 3

Multi-specialty and Primary Care Medical Groups Reported in 2017 - (152)

- AALFA Family Clinic
- Advanced Medical Clinic
- Affiliated Community Medical Centers
- Alexandria Clinic
- Allina Health Clinics
- Allina Health Specialties
- Altru Health System
- Amery Hospital and Clinic
- Apple Valley Medical Clinic
- Appleton Area Health Services
- Avera Medical Group
- Avera Medical Group - Corsica/Salem/St. Joseph
- Avera Medical Group - Estherville Medical Clinic
- Avera Medical Group - Pipestone
- Avera Medical Group- Aberdeen/Ipswich/ Marshall County Clinic
- Avera Medical Group- Marshall
- Avera Medical Group- McGreevy Clinic, United Medical Center, Worthington Speciality Clinic
- Avera Medical Group- Tyler Medical Clinic
- Axis Medical Center
- Bigfork Valley Hospital, Clinics & Communities
- Bluestone Physician Services
- Boynton Health Service
- Burnsville Family Physicians
- Catalyst Medical Clinic
- Cedar Riverside People's Center
- CentraCare Health
- Chippewa County Montevideo Hospital & Medical Clinic
- Christopher J Wenner MD PA
- Community University Health Care Center
- Cromwell Medical Clinic PLLC - IHN
- Cuyuna Regional Medical Center
- Dawson Clinic
- Dr. VM Baich, PA
- Dulcimer Medical Center
- Duluth Family Medicine Clinic
- Edina Sports Health & Wellness
- Entira Family Clinics
- Essentia Health
- Face to Face Health & Counseling Service, Inc.
- Fairview Health Services
- Fairview Mesaba Clinics
- Family Practice Medical Center of Willmar
- Family Tree Clinic - Neighborhood HealthCare Network
- FirstLight Health System
- Foley Medical Center
- France Avenue Family Physicians - Minnesota Healthcare Network
- Gateway Family Health Clinic
- Glencoe Regional Health Services
- Glenwood Medical Center
- Grand Itasca Clinic

- North Valley Health Center
- Northfield Hospital + Clinics
- NorthPoint Health & Wellness Center
- Northwest Family Physicians
- Olmsted Medical Center
- Open Cities Health Center
- Open Door Health Center
- Optage Primary Care, LLC
- Ortonville Area Health Services-Northside Medical Clinic
- Park Nicollet Health Services
- Parkview Medical Clinic - Minnesota Healthcare Network
- Parkway Family Physicians-Minnesota Healthcare Network
- Planned Parenthood Minnesota, North Dakota, South Dakota
- Prairie Ridge Hospital & Health Services
- Rainy Lake Medical Center
- Raiter Clinic, LTD - IHN
- Renville County Hospital and Clinics
- Richard Schoewe MD LLC
- Richfield Medical Group
- Ridgeview Clinics
- RiverView Health
- Riverwood Healthcare Center
- Sacred Heart Mercy Health Care Center
- Sanford Health - Fargo Region
- Sanford Health - Sioux Falls Region
- Sartell Pediatrics - IHN
- Sawtooth Mountain Clinic
- Scandia Clinic
- Scenic Rivers Health Services
- Sibley Medical Center DBA Ridgeview Sibley Medical Center
- Sleepy Eye Medical Center
- Smart Clinic-Custom Clinic
- Southside Community Health Services
- St. Croix Regional Medical Center
- St. Luke's Clinics
- St. Paul Family Medical Center
- Stellis Health, PA
- Stevens Community Medical Center
- Stillwater Medical Group
- Synergy Family Physicians, P.A
- Thomas A. Sult, MD. 3rd Opinion
- Tri-County Health Care
- United Family Medicine
- United Hospital District Clinic
- Unity Family Healthcare - Avon
- Unity Family Healthcare, Family Medical Center
- University of Minnesota Physicians
- Valley Family Practice- MHN
- Vibrant Health Family Clinics and Minnesota Health Network
- West Side Community Health Services
- Western Wisconsin Health
- Westfields Hospital and Clinic
- Williams Integracare Clinic
- Windom Family Medical Center
- Winona Health Services

Other Types of Medical Groups Reported in 2017

Allergy Medical Groups (5)

- Advancements in Allergy and Asthma Care
- Allergy, Asthma & Immunology Clinic
- Allergy & Asthma Specialists, PA
- Minnesota Allergy & Asthma Clinic, PA
- St. Paul Allergy & Asthma Clinic, P.A.

Behavioral Health Medical Groups (18)

- Associated Clinic of Psychology
- Associates in Psychiatry & Psychology
- BHSI
- Caritas Mental Health Clinic
- Family Life Center
- Lakeland Mental Health Center
- Mental Health Resources
- Minnesota Mental Health Clinics (Eagan, Edina, Lakeville, Maplewood, Minneapolis, Woodbury)
- Natalis Counseling & Psychology Solutions
- Northern Psychiatric Associates
- Nystrom & Associates, Ltd.
- Oak Ridge Center
- People Incorporated Stark Mental Health Clinic
- Ramsey County Mental Health
- Scott County Mental Health Center
- Western Mental Health Center, Inc.
- Woodland Centers
- Zumbro Valley Health Center

Endocrinology Medical Group (1)

- Endocrinology Clinic of Mpls.

Neurosurgery Medical Group (2)

- MKMD Neurosurgery PLLC dba KIM Neurosurgery PLLC
- Neurosurgical Associates, Ltd

Obstetrics/Gynecology Medical Groups (15)

- Adefris & Toppin Women's Specialists
- Clinic Sofia Ob/Gyn
- Community Memorial Hospital
- Comprehensive Healthcare for Women
- John A. Haugen Associates, PA
- Metropolitan Obstetrics & Gynecology
- Minnesota Women's Care
- Oakdale Ob/Gyn
- OBGYN West
- Obstetrics and Gynecology Associates
- Partners Ob/Gyn
- Premier OB/GYN of Minnesota
- Southdale Ob/Gyn Consultants
- Western ObGyn
- Women & Adolescent Gynecology Center

Orthopedic Medical Groups (9)

- Downtown Orthopedics, P.A.
- Heartland Orthopedic Specialists
- Little Falls Orthopedics
- Minneapolis Orthopaedics
- Northern Orthopedics, Ltd.
- Southwest Minnesota Orthopedics and Sports Medicine
- Summit Orthopedics
- The Orthopaedic & Fracture Clinic
- Twin Cities Spine Center

Pediatric/Adolescent Medicine Medical Groups (19)

- All About Children Pediatrics - Children's Health Network
- Central Pediatrics
- Children's | Minnesota
- Children's Clinic Network
- Children's Health Care
- Children's Respiratory & Critical Care Specialists
- Dakota Child and Family Clinic
- Dakota Pediatrics, P.A.
- Eagan Valley Pediatrics
- Fridley Children's & Teenagers' Medical Center - Children's Physician Network
- Gillette Children's
- Mendakota Pediatrics Ltd
- North Metro Pediatrics
- Northern Lights Pediatric and Adolescent Medicine
- Pediatric & Young Adult Medicine
- Pediatric Services - Children's Physician Network
- South Lake Pediatrics
- Southdale Pediatric Associates, Ltd
- Wayzata Children's Clinic

Urgent/Convenience Care Medical Groups (9)

- Chaska Urgent Care
- Emergency Physicians, P.A.
- Express Healthcare
- Fairview Express Care
- MinuteClinic
- Priority Pediatrics Urgent Care
- Seven Day Clinic
- Suburban Emergency Associates
- Target Clinic

We wish to thank all medical groups and clinics in Minnesota and bordering communities for their continued commitment to quality improvement as a means to provide the best care possible for patients.

APPENDIX 4

Summary of Risk Adjustment Results by Measure

Not all patients have the same likelihood of achieving optimal health outcomes due to barriers based on demographic, physical or socioeconomic situations. **Risk Adjustment** is the process of adjusting measures to account for the barriers that are outside the control or influence of the health care provider. Appropriate risk adjustment creates a more normal distribution of results.

The risk adjustment calculation uses an **Actual to Expected** methodology. This methodology does not alter the result of a clinic/medical group; the actual rate remains unchanged. Instead, that rate is compared to a unique expected rate based on the proportion of each risk category for each clinic/medical group rather than the raw market average.

To test whether there was a statistically significant difference between the expected and actual rates by each clinic/medical group, a **one population proportions test** was used. This method was employed to test the proportion of optimally managed patients attributed to a clinic/medical group compared to a specific value for that clinic/medical group. In the MNMCM case, the specified value is an expected rate calculated taking into account the overall state rate and adjusted for risk factors specific to the measure. The methodology uses a 99 percent test of significance.

The comparison between clinics/medical groups is the aforementioned test of significance and the **actual to expected ratio**: actual percentage of patients meeting criteria divided by the expected percentage of patients meeting criteria for the particular entities' mix of patient risk.

The twenty-one measures that were risk-adjusted using the methodology described above are detailed in **Table 48** on the next page along with the variables upon which they were risk-adjusted.

TABLE 48: 2017 RISK ADJUSTMENT VARIABLES PER MEASURE

Measure	Risk Adjustment Variables
Optimal Diabetes Care	Insurance Product Type (Commercial, Medicare, MN Government Programs, and Self-Pay/Uninsured) Age (Continuous) Diabetes Type (Type 1, Type 2, Unknown)
Optimal Vascular Care	Insurance Product Type (Commercial, Medicare, MN Government Programs, and Self-Pay/Uninsured) Age (Continuous)
Depression Care Measures (6)	Insurance Product Type (Commercial, Medicare, MN Government Programs, and Self-Pay/Uninsured) Age (Continuous) Initial PHQ-9 Severity Bands (Moderate, Moderately Severe, and Severe)
Spine Lumbar Discectomy/Laminotomy Spine Lumbar Spinal Fusion	Initial Functional Status Initial Mental Health Status Initial Physical Health Status Insurance Product Type (Commercial, Medicare, MN Government Programs, and Self-Pay/Uninsured)
Total Knee Replacement	Initial Functional Status Initial Mental Health Status Initial Physical Health Status Insurance Product Type (Commercial, Medicare, MN Government Programs, and Self-Pay/Uninsured)
Optimal Asthma Children (Adults and Children)	Insurance Product Type (Commercial, Medicare, MN Government Programs, and Self-Pay/Uninsured)
Colorectal Cancer Screening	Insurance Product Type (Commercial, Medicare, MN Government Programs, and Self-Pay/Uninsured) Age (Continuous)
Maternity: C-Section Rate	Insurance Product Type (Commercial, Medicare, MN Government Programs, and Self-Pay/Uninsured) Age (Continuous) BMI (<18.49, 18.5-24.9, 25-29.9, 30-35.9, 36+, MG not reporting, individual data missing)

The measures that are **not risk-adjusted** in the following charts are:

- Appropriate Treatment for Children with URI
- Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis
- Breast Cancer Screening
- Cervical Cancer Screening
- Childhood Immunization (Combo 10)
- Chlamydia Screening in Women
- Controlling High Blood Pressure
- Follow-Up Care for Children Prescribed ADHD Medication
- Immunizations for Adolescents
- Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening
- Pediatric Preventive Care: Overweight Counseling
- PHQ-9 Utilization
- Spine Surgery: Lumbar Discectomy/Laminotomy Process Measures
- Spine Surgery: Lumbar Spinal Fusion Process Measures
- Total Knee Replacement Process Measures
- Use of Spirometry Testing in the Assessment and Diagnosis of COPD

APPENDIX 5

Data Sources and Data Collection

Direct Data Submission (DDS) Measures

The data source for clinic results was the clinic itself. All data elements were specified by MNMCM in our 2017 Direct Data Submission (DDS) guides. These guides provided detailed steps and instructions to ensure that clinics submitted data in a standard format.

Data for DDS measures were reported at two levels: by clinic site and medical group. Clinics were defined as single locations where patients received care. Medical groups usually consist of multiple clinics. Often, the medical group provides centralized administrative functions for multiple clinics.

Medical groups/clinics that submit data for individual clinics first registered through the secure MNMCM Data Portal. Once registered, medical groups/clinics submitted the required data elements directly through the Data Portal. This is referred to as MNMCM's Direct Data Submission (DDS) process. Medical groups/clinics had the option to submit data on a clinic's total patient population (preferred) or, if necessary, a representative random sample of the clinic's total patient population. Detailed instructions for sampling were also provided in the 2017 DDS Guides. Medical groups/clinics that submitted through the DDS process must submit data for all clinics within the medical group as applicable.

Clinic abstractors collected data from medical records either by extracting the data from an electronic medical record (EMR) via data query or from abstraction of paper-based medical records. Medical groups completed numerous quality checks before data was submitted to MNMCM. Detailed instructions for medical groups/clinics conducting quality checks were provided in the 2017 DDS Guides. All appropriate HIPAA requirements were followed.

An extensive validation process conducted by MNMCM staff included pre-submission data certification, post-submission data quality checks of all files, and audits of the data source for selected clinics. For medical record audits, MNMCM used the National Committee for Quality Assurance's (NCQA) "8 and 30" File Sampling Procedure,

developed in 1996 in consultation with Johns Hopkins University. For a detailed description of this procedure, see www.ncqa.org. Audits were conducted by trained MNMCM auditors who were independent of medical groups and/or clinics. The validation process ensures that the data are reliable, complete and consistent.

APPENDIX 6

Methodology

Measures Reported

Three types of measures were reported at the medical group level: HEDIS measures that used an administrative data only method; HEDIS measures that used a hybrid method (administrative claims data plus medical record review); and measures that used data submitted directly to MNCM by medical groups and clinics from electronic health records or paper-based medical charts, known as Direct Data Submission (DDS).

The following HEDIS measures used the **hybrid method**:

- Cervical Cancer Screening
- Controlling High Blood Pressure
- Childhood Immunization Status - Combo 10
- Immunizations for Adolescents

The following HEDIS measures used the **administrative method**:

- Use of Spirometry Testing in the Assessment and Diagnosis of COPD
- Follow-Up Care for Children Prescribed ADHD Medication
- Appropriate Treatment for Children with Upper Respiratory Infection
- Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis
- Breast Cancer Screening
- Chlamydia Screening in Women

The following measures used data submitted directly to MNCM by medical groups and clinics known as DDS:

- Colorectal Cancer Screening
- Depression Care:
 - Depression Remission at Six Months
 - Depression Response at Six Months
 - PHQ-9 Follow-up at Six Months
 - Depression Remission at 12 Months
 - Depression Response at 12 Months
 - PHQ-9 Follow-up at 12 Months
 - PHQ-9 Utilization
- Maternity Care: Primary C-Section Rate
- Optimal Asthma Control - Adults
- Optimal Asthma Control- Children
- Optimal Diabetes Care
- Optimal Vascular Care
- Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening
- Pediatric Preventive Care: Overweight Counseling

- Spine Surgery: Lumbar Spinal Fusion:
 - Procedures with Pre & post-op ODI at One Yr
 - Functional Status at One Yr Post-op
 - Procedures with Pre & post-op Health Related Quality of Life (HRQoL) PROMIS Global Health (PGH) 10 at One Yr
 - HRQoL: Physical Health Status at One Year Postop
 - HRQoL: Mental Health Status at One Year Postop
- Spine Surgery: Lumbar Discectomy/Laminotomy:
 - Procedures with Pre & post-op ODI at 3 Months
 - Functional Status at One Yr Post-op
 - Procedures with Pre & post-op HRQoL PGH 10 at 3 Months
 - HRQoL: Physical Health Status at 3 Months Postop
 - HRQoL: Mental Health Status at 3 Months Postop
- Total Knee Replacement (TKR):
 - Procedures with Pre & post-op OKS at One Yr
 - Functional Status at One Year Post-op
 - Procedures with Pre-op & post-op HRQoL PGH 10 at One Yr
 - HRQoL: Physical Health Status at 3 Months Postop
 - HRQoL: Mental Health Status at 3 Months Postop

The MNCM Measure Review Committee annually reviews the DDS and HEDIS measures on the MNCM slate to ensure their collection and reporting continue to be of value to the community. The formation of this committee allows for increased stakeholder participation/influence and transparency/awareness of the measure review process.

Measurement specifications for medical group level results were calculated using NCQA's 2017 HEDIS Technical Specifications. Measurement specifications for clinic level results were calculated by MNCM's Data Portal using MNCM's 2017 DDS Guide and Technical Specifications.

MNCM summarized medical group/clinic performance (**Tables ES1 and ES2**) by:

- **Large Increase** in Statewide Rate or **Large Decrease** in Statewide Rate - These categories include measures that displayed a statewide rate change whose absolute value was greater than or equal to five percentage points from 2016 to 2017.

- **Moderate Increase** in Statewide Rate or **Moderate Decrease** in Statewide Rate - These categories include measures that displayed a statewide rate change whose absolute value was greater than or equal to three percentage points and less than five percentage points from 2016 to 2017.
- **Small Increase** in Statewide Rate or **Small Decrease** in Statewide Rate - These categories include measures that displayed a statewide rate change whose absolute value was less than three percentage point from 2016 to 2017.

Eligible Population Specifications

The eligible populations for the administrative and hybrid measures were identified by each participating health plan using its respective administrative databases. NCQA's 2017 HEDIS Technical Specifications provided the standard definitions for the eligible population for each measure, which included data elements such as age, continuous enrollment, and anchor date requirements. For administrative measures, the entire eligible population was the denominator. For hybrid measures, the eligible population served as the sampling frame from which to draw the number of patients for chart audit and the reference for weighting.

The eligible populations for the measures reported through the DDS process to MNMCM by medical groups and clinics were identified by a medical group on behalf of their individual clinics. MNMCM's 2017 Direct Data Submission (DDS) Guides provided technical specifications for the standard definitions of eligible population for each measure, which included elements such as age, appropriate diagnosis codes, and number of visits needed in the measurement time frame.

Patient Attribution to Medical Groups/Clinics

For HEDIS measures, health plans assigned patients to a medical group using a standard medical group definition based on tax identification numbers (TIN). Administrative billing codes determined the frequency of patient visits to medical groups. For most of the HEDIS measures, patients were assigned to the medical group they visited most frequently during the measurement year. Patients who visited two or more medical groups with the same frequency were attributed to a medical group visited most recently in the measurement year. For two of the HEDIS measures – Appropriate Treatment for Children with Upper Respiratory Infection and Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis – patients were assigned to the clinic they visited for the specific service. For one measure – Follow-Up Care for Children Prescribed ADHD Medication – patients were assigned to the provider who prescribed the medication

and then to the medical group where that provider practices.

In order to submit data at the clinic level for the DDS measures, medical groups attributed each patient to a single clinic within their medical group. Each medical group attested to using MNMCM's patient attribution methodology outlined in the data collection guides. Patients were generally attributed to an assigned primary care provider. Others are attributed to a provider who saw the patient most often in the measurement year or most recently in the measurement year.

Sampling

For HEDIS Hybrid Measures

As noted previously, the hybrid method required each participating health plan to first identify the eligible population meeting measurement specifications using its administrative databases. This population of eligibles served as the sampling frame from which to draw the denominator (the patients for whom medical record review would be completed). The resource-intensive nature of medical record review necessitated pulling a random sample of the eligible population, for medical record review. Medical record review was conducted for all enrollees drawn for the sample.

MNMCM used a two-stage, random sampling process for the hybrid measures. This strategy was designed with statisticians to ensure reporting for the maximum number of medical groups while minimizing the impact of weighting on the results for any one medical group. The sampling procedure started with the health plans providing a data file containing a record for each eligible patient for each hybrid measure. This file also identified eligible patients that had been selected for the annual HEDIS sample. Additional patients were then selected from the remaining eligible population to meet MNMCM minimum reporting requirements.

For Measures Collected by Direct Data Submission

Clinics may submit data on their full population (preferred) or, if necessary, a random sample of at least 60 patients per clinic. However, they are strongly encouraged to submit their total population of patients to achieve more precise rates and allow health plans to identify health plan product type. For clinics that chose to submit a sample, the 2017 DDS Guides provided technical specifications and accepted methods to select a systematic sample. If submitting a sample of patients, the clinic must attest to use one of the accepted sampling methods as part of the pre-submission data certification process. Further MNMCM review is completed as necessary.

The following measures required total population submission: Depression Care measures, Total Knee Replacement, Spinal Surgery: Lumbar Discectomy/Laminotomy, Spinal Surgery: Lumbar Spinal Fusion and Maternity Care: Primary C-section Rate.

Numerator Specifications

For HEDIS administrative measures, the numerator was the number of patients from the eligible population who met numerator targets. For HEDIS hybrid measures, the numerator was the number of patients from the sample who met numerator targets.

For DDS measures, the numerator was the number of patients identified from either the eligible population or the sample who met the numerator targets. The targets were specified by MNMCM in the 2017 DDS Guides technical specifications. Clinical quality data that the medical group submits is used to calculate the numerator; this data is verified through MNMCM's validation process.

Weighting

For HEDIS Hybrid Measures

Because data for the hybrid measures were taken from a sample, results were weighted to obtain accurate rates. This allowed for aggregation and unbiased reporting by medical group. Weighting was a cost-saving measure that enabled MNMCM to draw a sample on which to estimate medical group and statewide rates. Weighting was applied to efficiently utilize health plan resources for data collection on a randomly sampled population. Weights were calculated for each sampling stratum (i.e., health plan/health plan product/medical group). A weight was equal to the total eligible population for that stratum divided by the total sample size. In calculating rates for a population – medical group or statewide – the denominator was the sum of the weights for all patients in that population, and the numerator was the sum of the weights for patients in the population who met the numerator targets.

Direct Data Submission (DDS) Measures

Clinics may submit data for the DDS measures on their full population (preferred) or, if necessary, a sample of at least 60 patients per clinic. For clinics that elected to submit a sample from their total population, results were weighted to account for the total population.

Calculating Rates

For HEDIS Administrative and Hybrid Measures

Administrative and hybrid measures were reported at a medical group level and were expressed as percentages. They were calculated as 100 times the number who met the numerator targets divided by the number who were

eligible for the measure. Rates calculated for measures using the administrative method were straightforward. However, rates calculated for measures using the hybrid method required weighting because of the sampling procedures. Rates and 95-percent-asymmetrical confidence intervals were calculated for each measure for each medical group. Asymmetrical confidence intervals were used to avoid confidence interval lower-bound values less than zero and upper bound values greater than one hundred. Medical group rates are first calculated for each group and then a medical group average is calculated. The medical group average is displayed when comparing medical group performance to provide context.

For Measures Collected by Direct Data Submission (DDS)

Rates were expressed as percentages, calculated as 100 times the number that met the numerator specifications divided by the number in the denominator for the measure. Rates from measures using the total eligible population are straightforward calculations whereby the total eligible population serves as the denominator. Due to the dynamic nature of patient populations, rates and 95 percent confidence intervals are calculated for each measure for each medical group/clinic regardless of whether the full population or a sample is submitted. Rates are first calculated for each medical group/clinic and then an overall average rate is calculated. The overall average rate is displayed when comparing a single medical group/clinic to the performance of all medical groups/clinics to provide context.

For the orthopedic (Total Knee Replacement, Spinal Surgery: Lumbar Discectomy/Laminotomy, Spinal Surgery: Lumbar Spinal Fusion) functional, mental health, and physical health status measures, the result is reported as the average score change.

The denominator is the number of procedures that had both a pre-operative and post-operative tool administered and completed. An average score change is calculated for each medical group. The overall average score change is displayed when comparing a single medical group to the performance of all medical groups to provide context.

Risk Adjustment

Risk adjustment is a technique used to level the playing field for clinics/medical groups by adjusting for the differences in risk amongst specific patient groups. The process should isolate the clinic/medical group's true impact on patients' health and allow them to be compared more easily.

The risk adjustment calculation employed by MN Community Measurement uses an **Actual to Expected** methodology. This methodology does not alter a clinic/medical group's result; the actual rate remains unchanged. Instead, each clinic/medical group's rate is compared to a unique expected rate for that clinic/medical group that is based on the mix of patient risk seen at that clinic/medical group, rather than the raw market average.

To test whether there was a statistically significant difference between the expected and actual rates by each clinic/medical group, a **one population proportions** test was used. This method was employed to test the proportion of optimally managed patients attributed to a clinic/medical group compared to a specific value for that clinic/medical group. In the MNMCM case, the specified value is an expected rate calculated taking into account the overall state rate and adjusted for risk factors specific to the measure. The methodology uses a 99 percent test of significance.

The comparison between clinics/medical groups is the aforementioned test of significance and **the actual to expected ratio**: actual percentage of patients meeting criteria divided by the expected percentage of patients meeting criteria for the particular entities' mix of patient risk.

Twenty-one Direct Data Submission (DDS) measures were risk-adjusted using this methodology (see page 194 for list of measures). The Summary of Risk Adjustment Results by Measure section contains tables for both risk-adjusted and non-risk-adjusted measures.

The tables for the **risk-adjusted measures** include the following columns in order from left to right:

- **Medical Group Name**
- **Rate (Actual)** = Actual percentage of patients meeting criteria (unadjusted rate)
- **Lower Bound of 95% CI** = Lower bound of the 95 percent confidence interval for the medical group's/clinic's unadjusted rate
- **Upper Bound of 95% CI** = Upper bound of the 95 percent confidence interval for the medical group's/clinic's unadjusted rate
- **N** = Number of patients at a medical group/clinic site that meet the denominator criteria for the measure
- **Total Population or Sample** = Indicates whether the medical group/clinic submitted their total population or a sample of patients for the measure (see page 409

for explanation)

- **Rate (Expected)** = Expected percentage of patients meeting criteria based on the clinic's/medical group's mix of patient risk (adjusted rate)
- **Actual to Expected Ratio** = Actual percentage of patients meeting criteria divided by the expected percentage of patients meeting criteria for the clinic's/medical group's mix of patient risk
- **Rating** = Rating of medical group/clinic displayed on MNHealthScores.org
 - **TOP** = Top 15 clinics or Top 5 medical groups, as long as the clinic or medical group meets the Above rating criteria. For measures that have less than 10 reportable medical groups, there is no TOP assignment.
 - **Above** = Clinic or medical group's actual rate is significantly above their expected rate
 - **Expected** = Clinic or medical group's actual rate is equivalent to their expected rate
 - **Below** = Clinic or medical group's actual rate is significantly below their expected rate

The tables for the **non-risk-adjusted measures** include all of the columns noted for risk-adjusted measures except Rate (Expected) and Actual to Expected Ratio. Additionally, non-risk-adjusted measures are rated on the following scale:

- **TOP** = Top 15 clinics or Top 5 medical groups, as long as the clinic or medical group meets the Above rating criteria. For measures that have less than 10 reportable medical groups, there is no TOP assignment.
- **Above** = Clinic or medical group's actual rate is significantly above the statewide average
- **Average** = Clinic or medical group's actual rate is equivalent to the statewide average
- **Below** = Clinic or medical group's actual rate is significantly below the statewide average

Limitations

The medical groups and clinics identified in this report do not represent all medical groups and clinics in Minnesota. MNMCM established minimum thresholds for public reporting to ensure statistically reliable rates. Only medical groups and clinics that met these thresholds were reported. Because hybrid measures are based on a sample, a higher threshold is used: 60 patients per medical group was the minimum requirement for public reporting to ensure a reasonable level of confidence in the reported rate. However, administrative measures are based on a complete census of managed care patients, so a minimum threshold of 30 patients per medical group was required. DDS measures are based on complete census of all patients regardless of payer, so a minimum threshold of 30 patients per clinic was required. It should also be noted that although medical groups and clinics are reported for some measures they may not be reported for all measures.

Data used to calculate rates for the HEDIS administrative and hybrid measures reflected patients insured through 10 health plans. Medical groups with patients who were insured through other health plans, who were uninsured, who self-pay, or who were served by a Medicaid/Medicare fee-for-service program were not reflected in these results. Therefore, the data for these measures does not necessarily represent a medical group's entire patient population. In addition, caution is recommended when making comparisons from year to year. Annual rate differences can occur due to natural variation, changes in measurement specifications, changes in data sources and other factors.

Data Analyses

Identifying High Performing Medical Groups/Clinics

For each measure, both individual medical group rates and a medical group average rate were calculated. Medical groups that achieved high performance were identified by comparing the individual medical group/clinic rate with the medical group average. Medical groups that had rates that were fully above the medical group average and 95 percent confidence intervals were noted as high performers. These high performers were highlighted in the results by measure section for each measure. The performance rates for all medical groups were presented in descending order. Additionally, the Top 5 performers are identified via an asterisk (*). The same methods were applied at the clinic-level for Optimal Diabetes Care, Optimal Vascular Care, Depression measures, Pediatric Preventive Care: Adolescent Mental Health and/or Depression Screening,

Pediatric Preventive Care: Overweight Counseling, Optimal Asthma Control, Maternity Care: Primary C-Section and Colorectal Cancer Screening. Top 15 performers are identified via an asterisk (*).

Identifying Medical Groups and Clinics with Biggest Improvements

For each measure, individual medical group and clinic rates during report year 2017 were compared with their rates during report year 2016, calculating an absolute percentage point difference. Medical groups and clinics with the largest percentage point increases were identified.

Medical Group and Clinic Performance Over Time (Three Years)

This analysis was done to determine patterns of medical group and clinic performance over time per measure. Patterns were reviewed for the three reporting years (2015, 2016 and 2017). See "Medical Group Performance Over Time (2015-2017)" in the results by measure section for those measures where three years of data was available.

Patterns in rate changes over the three reporting years were reviewed. Only medical groups with reportable rates for each of the three reporting periods per measure were included in the analysis. The percent and number of medical groups were reported for each of the following patterns of rate changes over the past three years for each measure:

- **Consistently improved:** Medical groups with more than a two percentage point increase between each consecutive year.
- **Relatively stable:** Medical groups that had no more than a two percentage point increase or decrease between each consecutive year (-two percent – +two percent).
- **Consistently decreased:** Medical groups with more than a two percentage point decrease between each consecutive year.
- **Variable performance (with an improvement or with a decline):** Medical groups with an up/down pattern that was not consistent and did not fall into one of the other categories.

Patient Experience

The Patient Experience of Care Survey is required every other year for all clinics who hit a patient count threshold based on the size of the clinic (by count of providers). All unique adult patients seen in the clinic for a face-to-face visit with a provider (MD, DO, advanced practiced RN, PA) during the eligibility period of February 1, 2016 through April 30, 2016 were counted. Clinics hit eligibility if they saw at least the minimum patient threshold.

Exclusions were psychiatry-only practices. The number of clinics participating in the survey is 842 sites in Minnesota and surrounding states (WI, ND, SD, IA). However, only eligible MN clinics were required to field the survey in compliance with the MN Department of Health (MDH) Statewide Quality Reporting and Measurement System (SQRMS).

Clinics contracted with a certified-CAHPS survey vendor to distribute the survey on their behalf. Patient visits from the measurement period of September 1, 2016 – November 30, 2016 were used to select a random sample of adult patients, 18 and older, to receive the survey. Clinics that are health care home (HCH) certified are required to field the adult CAHPS 3.0 + PCMH supplemental questions. If there are pediatric clinics in the medical group that are HCH certified, the group is also required to field the pediatric CAHPS 3.0 + PCMH survey towards HCH recertification.

MNCM conducted extensive validation with both the clinics and survey vendors prior to the live measurement period. Clinics submitted documentation to MNMCM on their visit selection process; providing screen shots of the relevant field criteria. Survey vendors submitted draft survey and cover letter drafts, test data files and mode/frequency of survey distribution for review. All components had to be approved by MNMCM prior to any live surveying occurring.

Final data files were uploaded to MNMCM's Data Portal in March 2017 for review. Quality checks were conducted on the raw data; and then an analysis program will be applied to clean the data and generate domain results.

The 2017 results were publicly reported on MNHealthScores.org in July 2017.

APPENDIX 7

MNHealthScores.org

A critical component of MN Community Measurement's (MNCM) mission is to publicly report health care information, with the goal of driving improvement. Our public reporting website is [MNHealthScores.org](https://mnhealthscores.org); it is focused on and designed for patients, their families and the public to help them make educated choices about where to obtain care and what care they should expect.

In 2014, we redesigned [MNHealthScores.org](https://mnhealthscores.org) to make it easier to find, compare and share ratings on the quality of medical clinics and hospitals, health care cost and patient experience ratings. The MNHealthScores.org website features dynamic, customizable ratings that are easier to understand and combine best practices from academic research and real world testing. And most importantly, everyone can use the information to make smarter decisions about health care in Minnesota.

MNHealthScores.org displays ratings on medical group and clinic measure quality. Now, visitors looking for information on health care cost and quality can easily:

- See all available ratings at a glance
- Create side-by-side rating comparisons with the medical group quality and cost of care topics
- Use health topic sub-categories to find specific ratings faster
- Hide entities with no available ratings. Unhide them with one click
- Select up to three profiles of medical groups to compare, including all of their available cost and quality ratings
- Add optional filters and control how search results are sorted

We hope you'll visit [MNHealthScores.org](https://mnhealthscores.org) and recommend it as a resource to your friends, colleagues, patients and other community members.

In our effort to make the site as consumer-friendly as possible, some measure names were adjusted for clarity. They include:

Measure Name for Data Collection	Measure Name on MNHealthScores.org
Appropriate Treatment for Adult Bronchitis	Bronchitis
Appropriate Treatment for Children with URI	Colds: Children
Childhood Immunization Status (Combo 10)	Vaccinations: Children
Controlling High Blood Pressure	High Blood Pressure
Depression Remission at 12 Months	Depression: Feel Better (12 Months)
Depression Remission at 6 Months	Depression: Feel Better (6 Months)
Depression Response at 6 Months	Depression: Improved Symptoms (6 Months)
Follow-Up Care for Children Prescribed ADHD Medication	Attention Deficit Hyperactivity Disorder (ADHD)
Immunizations for Adolescents	Vaccinations: Adolescents
Maternity Care: Primary C-section Rate	Maternity - Cesarean Deliveries
Optimal Asthma Care - Adults Age 18-50	Asthma: Adults
Optimal Asthma Care - Children Age 5-17	Asthma: Children
Optimal Diabetes Care	Diabetes: Adults
Optimal Vascular Care	Vascular Care
Pediatric Preventive Care: Adolescent Mental Health Screening	Mental Health Screening: Teens
Pediatric Preventive Care: Overweight Counseling	Overweight Counseling: Children
PHQ-9 Follow-Up at 12 Months	Depression: Follow Up (12 Months)
PHQ-9 Follow-Up at 6 Months	Depression: Follow Up (6 Months)
PHQ-9 Utilization	Depression: Assessing Symptoms
Spine Surgery Fusion: Functional Status at One Year Post-Op	Lumbar Fusion Surgery: Pain, Function and Mobility
Spine Surgery Fusion: Procedures with Pre-Op and Post-Op ODI	Lumbar Fusion Surgery: Assessing Symptoms
Spine Surgery Discectomy/Laminotomy: Functional Status at Three Months Post-Op	Herniated Disc Surgery: Pain, Function and Mobility
Spine Surgery Discectomy/Laminotomy: Procedures with Pre-Op and Post-Op ODI	Herniated Disc Surgery: Assessing Symptoms
Total Knee Replacement: Procedures w/Pre-op & Post-Op OKS	Total Knee Replacment: Assessing Symptoms
Total Knee Replacment: Functional Status at One Year Post-Op	Total Knee Replacment: Assessing Symptoms
Use of Spirometry Testing in the Assessment and Diagnosis of COPD	Chronic Obstructive Pulmonary Disease (COPD)

APPENDIX 8

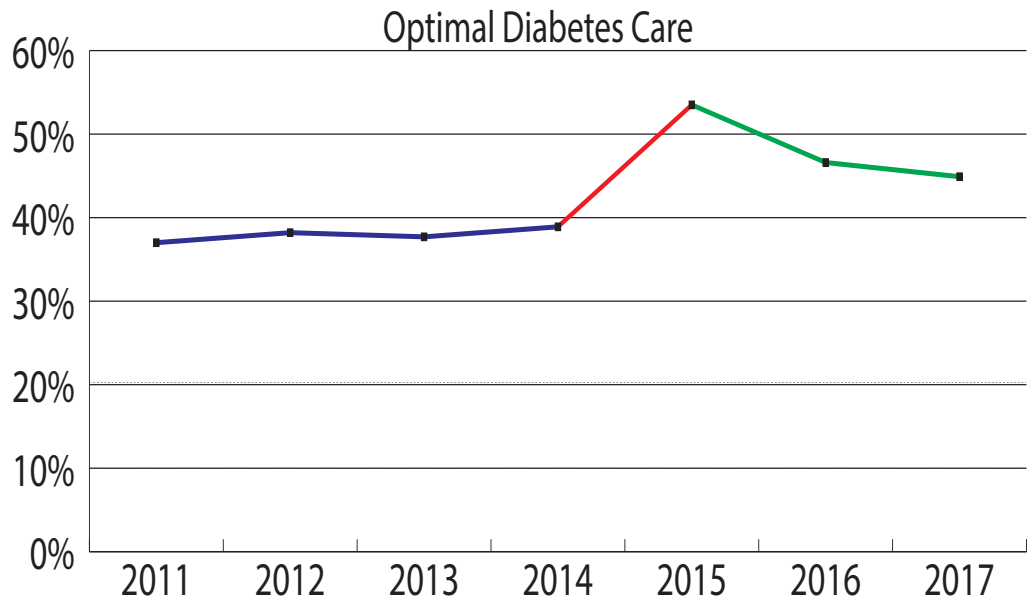

General Guidelines for Comparing MNCM Results over Time

MNCM publicly reports the results of health care measures, many of which are used for state and federal programs. Measures can change over the course of time and the most common reasons are a change in the evidence (guidelines) or an enhancement of a measure. Some changes are considered minor (e.g., a new diagnosis code), some changes can be recast in the data (e.g., A1c < 7.0 to A1c < 8.0), and some changes are considered major and a barrier to year-over-year comparison (e.g., numerator change LDL < 100 to appropriate statin use).

Guiding principles to follow when considering comparisons over time:

- Comparability is influenced by the type of measure, the type of change and magnitude of change. Not all changes are treated equally and need to be considered on a measure by measure basis.
- Numerator: In general, changes in the numerator or a complete measure construct re-design are considered barriers to measuring a medical group’s performance from one year to the next. Year-to-year and percent improvement calculations are not recommended unless the data can be recast.

- Denominator: Changes in the denominator may or may not be considered barriers to comparison, it is dependent on the measure and the nature of the clinical condition. For example, the former visit counting criteria artificially eliminated up to 50% of the eligible population with ischemic vascular disease (IVD). These patients all have IVD, a chronic irreversible condition. An enhanced technical method of determining that patients who have the condition (e.g., added problem list) and are established to the medical group (established office visit CPT) still allows comparability as these patients have been treated for their IVD all along. The provider is not going to say “gee you didn’t meet the two visits in two years with the diagnosis codes criteria, so I’m not going to treat your IVD”.

Performance Rates Over Time

Report Year	Statewide Average	Numerator	Denominator
2017^	44.9%	131,779	293,677
2016+	46.6%	119,971	260,197
2015*	53.5%	131,847	249,878
2014	38.9%	90,499	230,818
2013	37.7%	80,190	208,809
2012	38.2%	73,037	184,234
2011	37.0%	61,930	158,770

* No cholesterol component during redesign
 + New cholesterol component for statin use in place
 ^ Established patient criteria replaces visit counting

- Some changes in the denominator may warrant caution in comparability. For example, utilizing the problem list for identifying patients with asthma, increases the denominator and includes patients who have the condition but may not have had an asthma related encounter.
- Measure Construct: State-wide rates may be displayed over time if a change in the measure construct is noted. Claiming a true improvement would not be accurate, but noting the change is appropriate.
- Exclusions: Changes in exclusions, as in adding or removing an entire exclusion, most likely will not impact the ability to compare measures over time unless the changes are clinically significant and there are large changes in the volume of patients represented.
